California State Library

EXTRACT

From an Act prescribing Rules for the Government of the State Library. passed March 8th. 1861.

SECTION 11. The Librarian shall cause to be kept a register of all books issued and returned; and all books taken by the members of the Legislature, or its officers, shall be returned at the close of the session. If any person injure or fail to return any book taken from the Library, he shall forfeit and pay to the Librarian, for the benefit of the Library, three times the value thereof; and before the Controller shall issue his warrant in favor of any member or officer of the Legislature, or of this State, for his per diem. allowance, or salary, he shall be satisfied that such member or officer has returned all books taken out of the Library by him, and has settled all accounts for injuring such books or otherwise.

SEC. 15. Books may be taken from the Library by the members of the Legislature and its officers during the session of the same, and at any time by the Governor and the officers of the Executive Department of this State who are required to keep their offices at the seat of government, the Justices of the Supreme Court, the Attorney-General, and the Trustees of the Library.

Commencement of Fourteenth Volume

—OF THE—

Mining and Scientific Press

Published Every Saturday.

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Men of the Pacific Coast, which cannot be derived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now brighter than at any former period. Our facilities for furnishing a valuable paper are constantly increasing.

Editorial Expressions:

Following are some of the many opinions generously expressed by our neighbors:

MINING AND SCIENTIFIC PRESS.—The paper whose name we have just written, ranks among the leading scientific journals of the world. On mining matters it certainly has no equal, and more than all other causes combined, it has advanced the interests of the quartz miners of the Pacific Coast. Its editors are men of thorough education and large practical experience, and its list of contributors embraces many names distinguished in the various fields of scientific exploration and mechanical invention. The MINING AND SCIENTIFIC PRESS ought to circulate universally among intelligent Californians, to whom we most cordially recommend it, and its traveling agent, O. P. Truesdell, who is now canvassing this city and county, and will shortly visit other counties in the southern part of the State, in the interest.—[Stockton Daily Independent, Sept., 1866.

"SULPHURETS," and "Our Lady Correspondent," of the MINING PRESS, have each contributed an interesting article on Mines and Mining in Amador county. Hope they will keep up the fire. One of our subscribers complains that "Sulphuret" fell into an error, in stating that the sulphurets of the middle or Jackson range are richer than those on the upper or Pine Grove. He thinks it is just the reverse.—[Amador Ledger.

VOLUME TWELFTH.—The MINING AND SCIENTIFIC PRESS with its last issue, commenced its twelfth volume. Since Dewey & Co. have "hold the ribbons" its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

A VALUABLE AND USEFUL JOURNAL—ESTABLISHED IN 1860.

PRINTING OF EVERY VARIETY CORRECTLY AND PROMPTLY DONE.

MINING AND SCIENTIFIC PRESS.—We received a visit a few days since, from Mr. Wood, agent for the MINING AND SCIENTIFIC PRESS, who is now canvassing this county for subscribers to that valuable journal. The PRESS is invaluable to miners and mechanics, being the only journal of any importance on the coast entirely devoted to their interests.—[Mountain Messenger.

SUBSCRIBE FOR IT.—The large, illustrated sixty-four column weekly newspaper—the San Francisco MINING AND SCIENTIFIC PRESS—should be taken by every miner, prospector, and intelligent citizen throughout Colorado, as it gives a mint of most useful information to be gained no other way, on mining matters generally.—[Rocky Mountain News.

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

THE MINING PRESS is particularly the miners' journal, and is doing more for the solid interests of the State than any other, by enabling its readers to unlock the mines of untold wealth which lie waste around them.—[Mountain Messenger.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

THE PRESS is a large, sixteen page paper, and is truly a valuable assistant to the mining interests of the Pacific Coast.—[Nye County News.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics.—[Placer Herald.

Those who would have a good paper of this character should subscribe now.—[Marysville Appeal.

A good paper for this country.—[Humboldt Register Na.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

Interesting and important to miners and Mountain men.—[Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

JOB PRINTING

—FOR—

THE PEOPLE!

Mining and Scientific Press

JOB PRINTING OFFICE,

505 Clay Street,

(Southwest corner of Sansome street, on 2d floor,)

Formerly WATERS BROS. & CO.'S.

We are now prepared to offer customers the most favorable inducements to patronize our Book and Job Printing Establishment. Our office is supplied with an EXTENSIVE assortment of Type, and the BEST style of Presses for GOOD WORK and

CHEAP AND RAPID PRINTING.

Patrons will always find us well up to the times, ready to execute superior work, and furnish the same as cheap as any prompt and reliable firm in San Francisco.

Our aim is to SUIT OUR CUSTOMERS in regard to style and prices, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.

We give especial attention, when desired, in assisting parties in making up or revising their copy. Particular care will always be given to the publication of

LAW BRIEFS,
CERTIFICATES OF STOCK,
MISCELLANEOUS BLANKS,
BLANK BOOKS,
MINING BLANKS,
BOOKS
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages can be forwarded by mail at small expense.

City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

MINING AND SCIENTIFIC PRESS
PATENT AGENCY FOR THE PACIFIC COAST,
SAN FRANCISCO, CAL.

TO INVENTORS
ON THE
Pacific Coast.

Messrs. DEWEY & CO.

Take occasion to call your attention to the following rules, regulations and suggestions relative to the obtaining of LETTERS PATENT of the United States:

Self-Evident Facts.

Having had large experience, and gratifying success with the great variety of cases emanating on this coast, we feel confident of our abilities to assist inventors in patenting their inventions, saving them from vexatious delays, and from receiving worthless papers by reason of imperfect preparation of their claims before being sent to the Patent Office.

The branch of Patent Law is of itself a SPECIALITY of legal jurisprudence; or, as Mr Phillips, an eminent Patent lawyer, justly remarked: "The metaphysics of the law."

In early days but little preparation was needed, or but ordinary skill required to obtain a patent; but now, by reason of the multiplicity of inventions, and the numerous acts of Congress, found necessary to protect the inventor while the patent lasts, and to do justice to the people after it expires, the utmost care and skill are requisite in managing cases and obtaining a patent that will be of real value to the Patentee, and stand the test of passing through the legal ordeal of an infringement suit.

The general practice of the Patent office regarding the examination or issue of Letters Patent for inventions has not been materially changed for many years, yet there have been amendments added to the laws of 1861, 1863 and 1866, and which it is necessary for all parties managing an application to be conversant with. Old inventors invariably advise the employment of none but agents of *responsibility* and *experience*. As agents with such qualifications, we solicit your patronage.

Confidential Advice.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice we make no charge. A pen-and-ink sketch and description of the invention should be sent together with a stamp for return postage. Write plain, do not use pencil or pale ink; be brief.

Remember all business committed to our care, and all consultations, are kept by us secret and strictly confidential. Our permanent business interests demand, as it were, a sacred compliance with our obligations as solicitors, and in reference to our strict fidelity in this respect we refer to one and all of the hundreds of inventors and patentees on this coast who have patronized us.

Letters Patent.

A patent is an open letter, embodying all the language of an inventor or his agent, contained in the specification, without alteration, and is granted to citizens of the United States, or those who have declared their intention of becoming such, and is signed by the Secretary of the Interior and the Commissioner of Patents, with the seal of the Patent Office affixed. Its jurisdiction is for the whole United States, for the term of seventeen years.

A patent right is personal property, and is assignable, but cannot be seized and sold on execution.

What Claims can be Patented?

A knowledge of Ancient and Modern Mechanics and familiarity with American and Foreign patent issues and rejections, enables us to determine in a measure in all cases what can be patented, and how much can be claimed as new and novel, and be covered by Letters Patent. This is one of the most difficult questions encountered by both old and new inventors—one in which an experienced counsel is of great service—and yet it can never be positively determined except by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate drawings and payment of the first government fees.

Steps Necessary to Procure a Patent.

The FIRST thing required is a model, if your invention can be represented by one. It is not only immediately necessary in preparing the papers, but the law demands that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions. A less size model will answer when more convenient. It should be neatly made, and of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it in a permanent manner.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express, or otherwise, to our address, namely: DEWEY & CO., *Mining and Scientific Press, San Francisco.* Prepay expenses and send express receipt to us by mail.

A full description must also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance, stating the name and address of the sender. On the receipt of the model and Government first fee of $15 in currency, the case is duly registered on our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government last fee of $20 in currency will be required. The law states that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication, as the business can be well done by correspondence.

When the invention consists of a new article of manufacture, a medicine, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished, with full description of the entire preparation.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of Government officials, the period is sometimes extended to four or five months, and even more. We make a special point to advance our cases as rapidly as possible.

Saving of Time.

In urgent cases for an immediate patent, persons can deposit the amount of the last fees with us, in San Francisco, and have our Washington agent procure the *issue* of the papers as soon as granted, saving the two or three months time which would otherwise be required for the inventor to receive notice and then forward the money. Money advances for this purpose will be returned, should the application be rejected. By adopting this course, we are enabled, with our other advantages, to secure the *receipt* of patent papers to inventors on this Coast, at least four or five months sooner than can be done through agents in the East, without the applicant going to the hazardous expense of sending on the last fee before it is known whether the patent will be granted.

Expense of Applying for Patent.

The Government fee, on filing an application for a patent in the United States, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added fees for preparing the various documents and expense of drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, varies from $20 to $40.

Following is the list of Government fees:

On every caveat	$10
On every application for a patent, for seventeen years	15
On every application for a design, for 3 y'rs and 6 mos	10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Examiners-in-Chief	10
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Caveats.

A caveat is a description of the invention designed to be patented, lodged in the Patent Office before the patent is applied for, and while the inventor is perfecting his design. When *properly* made, it operates as a bar to applications respecting the same invention from any other quarter; but when improperly done, it is inoperative by reason of such defect. The Patent Office always returns a receipt for caveat papers with a copy of the laws governing the same, but does not seek to point out its incorrectness, unless there be some glaring defect.

If worth filing at all, these cases should be prepared with very great care and caution.

One inventor on this Coast, who had filed a caveat by an attorney, was, sometime afterward, surprised to find that his invention, which was a very important one, had been patented and was being brought out by an eastern company with a capital of more than a million of dollars. Upon inquiring at the Patent Office, he was informed that his caveat was inoperative by reason of imperfections and his not having complied with the law in that case as made and provided.

Our fee for the service varies from $10 to $20. The Government fee, under the new law, is reduced to ten dollars. This latter sum does not now apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat papers, we only require a sketch and description of the invention; no model being necessary.

If an inventor publicly uses and sells his invention, prior to making application for a patent, he cannot, afterward, prevent others from doing the same thing; and should any party put the invention into use, before such application for a patent is made, they could continue to use the specific machine or composition of matter after the patent is issued to another. Filing a caveat does not give the right to affix the words, "Patented," or "Patent applied for."

Patent Rejections.

First. Refusals are always made by the Patent Office if there is any informality in the specification, or if it does not contain the entire subject matter of the invention, and is not properly arranged and stamped. A slight omission often proves fatal.

Second. If the drawings are defective, and are not executed in an artistic manner in India ink, and on sheets of the required size, they are subject to rejection.

Third. Applications are always rejected where the claims conflict with others already patented.

If the rejection should be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case.

For the prosecution of such cases, obtaining references, making arguments, and personally attending to explain the case (through our agent in Washington), *we charge no second fee,* as is the case with some agencies, but attend to the business till finally allowed or rejected, without extra charge, beyond the Government fee.

Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unsurpassed facilities in securing favorable results. We have been successful in securing Letters Patent in many such cases. Our terms are very moderate.

Advantages to Patrons of Our Agency.

Some of the advantages to be obtained by patronizing us, may be enumerated as follows:

1. Inventors on this Coast having their applications for patents made out through our agency can sign their papers at once, and thus secure their rights at least *three months sooner* than by trusting the same to distant agencies, situated at New York or Washington.

2. As many of the inventions conceived here are especially adapted to the Pacific Coast, they should be properly brought out here, which can be accomplished (if the invention is a meritorious one) by illustrating the subject, with a careful description, in the columns of the "Mining and Scientific Press," *free of charge;* the inventor paying simply for the engraving, which will be executed at a moderate charge. The same cuts can be subsequently used for hooks, letters, or circulars. In a word, we are determined to make it of decided interest for every inventor on this Coast to patronize home talent and enterprise.

3. Most inventions on this Coast are for objects and purposes but little understood by parties at Washington or other parts of the East. Our mining machinery, processes and operations are best understood by those familiar with their use; and a personal, verbal explanation is oftentimes of important service, and enables us to be more successful than agents generally.

4. Remittances of money made by individual inventors to the Government sometimes miscarry, and it has frequently happened that applicants have not only lost their money, but their inventions, also, from this cause and consequent delay. We hold ourselves responsible for all fees entrusted to our agency. By sending duplicate correspondence to our Washington agent we avoid hazardous delays.

Dangers of Delay.

Situated so remote from the seat of Government, delays are even more dangerous to the inventors of the Pacific Coast than to applicants in the Eastern States. Valuable patents may be lost by the extra time consumed in transmitting specifications from Eastern agencies back to this Coast for the signature of the inventor, or by reason of return for amendment when addressed directly by the inventor to the Government.

Re-Issues.

When, through "inadvertance, accident, or mistake," an *insufficient* or *defective* patent has been issued, the defects in the Specification and Claims can be cured by a *re-issue.* In order to obtain this, the inventor, or the holders of the patent, must surrender the patent, and file an amended specification and drawings, and a statement specifying the ground for asking for a re-issue. Re-issues are generally applied for after it has been found that the patent could not withstand litigation. It is, therefore, especially desirable that the new Specification and Claims should be prepared with great care and skill. Terms liberal in these cases.

Foreign Patents.

In addition to American patents, we secure, with the assistance of co-operative agents, claims in all foreign countries which grant patents, including Great Britain, France, Belgium, The Netherlands, Prussia, Austria, Russia, Spain, British India, Saxony, Hanover, Sardinia, Norway, Sweden, Australia, Mexico, Victoria, V. I.

Many valuable and important inventions of Americans are being yearly surreptitiously patented in foreign countries, some of which governments allow it, thus debarring those who have valuable inventions from their rights.

Patents obtained in England, France and Belgium, will secure the rights of an inventor among many millions of the most enlightened people on the globe; it is therefore very important, if the invention is valuable, to secure foreign patents.

Our schedule prices for obtaining foreign patents, in all cases, will be as low, or lower, than those of any other agency.

To Eastern Inventors.

Our close proximity to Mexico, Australia, and the Islands, enables us to obtain Letters Patent for you with much less *delay* and expense than they can be secured through any other agency in the United States.

Comparatively few inventors seem to be aware that Melbourne, in Australia, is a city nearly double in size to San Francisco, besides the adjacent colonies of great commercial and mineral importance. Inventions of all kinds, but especially those relating to the saving of gold and silver, if secured in Australia, will often prove of great value. We have competent agents there, and can promise that the business will be attended to with fidelity and dispatch.

VOLUME TWELFTH.

With our present issue we commence a new year, and the twelfth semi-annual volume of the MINING AND SCIENTIFIC PRESS. We have abundant evidence that no class journal has ever been established which, in so short a time, has become so highly appreciated by those for whom its publication has been especially designed, or by the thinking and intelligent portion of the community generally. We may be pardoned for referring, with some degree of pride, to what the present proprietors have done, in the short space of two years, in building up this paper; and we confidently point to the past as an earnest of what our future shall be.

We shall continue, as heretofore, to spare no labor or expense to keep up and add to the well-earned reputation which the paper now enjoys, and shall exert our utmost endeavor and means to render it still more useful and acceptable to the miner, the mechanic, and the general reader. We make no apology and feel no delicacy in asking and urging upon the friends of the paper, everywhere, to aid us in extending its circulation, or in calling upon them to assist us in filling our columns with facts and information which shall be of value to our readers in the several departments of practical knowledge to which the paper is devoted. We return sincere thanks for past favors, and earnestly solicit a continuance of similar ones in future.

The rapid strides which are now being made in scientific mining on this coast, and the constant modification of old processes, which experience teaches us is a necessity for their economical adaptation to the anomalous condition of the mines and mining interests here, to say nothing of the new discoveries and improvements which the ingenuity and experience of man is constantly seeking to apply to mining operations, renders the existence of a journal, exclusively devoted to such specialities, an indispensable requisite to every miner and millman who desires to keep himself posted in the progress of the chemistry, metallurgy, and mechanics of mining. The wonderful discoveries and marvelous deeds which are now almost daily being achieved in the domain of science and art, render serial scientific and class publications the mainstay and dependence of every person who would keep up with the times. The achievements of the past few years in this direction are absolutely astounding; and who knows—who can imagine what a year may accomplish? Books are useful only as a record of the past—the living, active present can be found only in the pages of the newspaper and magazine.

With these facts and suggestions before us, may we not look with confidence to the active assistance of our friends? It will readily be acknowledged that the greater the income, the greater will be our facilities for collecting and disseminating information which shall be useful to our readers. We have no especial desire to make the MINING AND SCIENTIFIC PRESS a money-making institution; but we *do* own up to a desire to establish a really reputable and creditable journal in San Francisco, devoted to the mining interests of the Pacific coast, which shall be a living, lasting monument to our labors, a credit to California, and a valuable medium for the dissemination of useful information. To accomplish this, we are willing to work and to wait—we are willing to put into the enterprise every dollar, over and above actual expenses, which the liberality of friends may place at our disposal.

Hence we trust that the friends of the paper will take hold of the matter in earnest, and swell our already large list to double its present proportions. We can assure them, if they will do so, we shall more than double the value of the paper, without any increase in its price. Tendering our readers the compliments of the season, we bid you, one and all, a Happy New Year.

SINGULAR EFFECTS OF COAL OIL.—Under this heading the Virginia *Enterprise* recently chronicled a circumstance where a man in that city, in pouring a canful of coal oil from one can to another, and during the operation having occasion to regulate the stream by placing his thumb over a portion of the hole in the can from which he was pouring, found, on removing his thumb, that it was frozen stiff. The editor regards this as a very singular circumstance to be produced by oil, adding: "Had the fluid been ether there would have been nothing so strange about it, but kerosene is certainly not sufficiently volatile to have produced, by evaporation, so great a degree of cold in so short a time. It appears to us that here is a nut for some savans to crack. The freezing did not occur in the open air, but in a room comfortably warmed."

Our cotemporary is certainly mistaken in his conclusions. The freezing was most undoubtedly the result of a rapid evaporation of the more volatile portion of the oil. The heat of the room was more favorable for the result than a cold one would have been. The oil, very likely, was a very poor quality, containing an unusually large proportion of the most volatile substance that always accompanies in a greater or less quantity, all coal oil. The change of this liquid from a liquid to a gaseous state is so rapid that *ice* is often formed at the mouths of flowing wells, in the hottest summer weather. We are not at all surprised at such a result, as above described, under the circumstances indicated.

A QUARRY of fire-proof stone has been found in the Truckee mining district. Sixty tons have been taken out and sold to Webber, at Ætna District, Humboldt, with which he is going to build a furnace for the purpose of roasting ore.

SUGAR MACHINERY.—Mr. James Macken, coppersmith, 226 Fremont street, is now engaged in manufacturing a large copper sugar evaporating pan, for a sugar plantation at Tepec, near Mazatlan, Mexico. He is also at work upon a worm for the new sugar refining company, on Brannan street, and a similar instrument for a liquor distillery.

THE amount disbursed on this coast during the past nine months, ending September 30th, exceeded $12,500,000, and the income of the Government for the same period, from all sources, amounted to $8,000,000.

THE MINER'S CONVENTION.

The miners throughout the State will be pleased to learn that the directors of the California Steam Navigation Company, and the San Jose Railroad Company, will carry the representatives from the mining districts to the Miners' Convention at Sacramento, for half fare each way. To secure the benefit of this reduction in fares, those applying for it must show that they have been elected or appointed to represent some mining district at the Convention. We presume that the other railroad companies in the State will extend the same courtesies that have been volunteered by the San Jose Company.

As the Convention will meet on the 17th instant, it is necessary that districts desiring to be represented should elect or select their representatives as soon as possible. From present appearances, this Miners' Convention will be one of the most important events that has happened in the State, and no mining district should be unrepresented at its meeting. Every paper, we believe, throughout the State, has published the call, and nearly or quite every journal representing mining interests, have accompanied the publication with remarks, more or less extended, urging the importance of holding such a Convention. In order to secure a full attendance, it will be necessary that some local action should be taken in each separate mining locality. It would be well for each mining township or, when more convenient, for each separate mining camp to call a meeting of those interested, and see that a reasonable number of practical miners will pledge themselves to be present. Although the Convention will not require of its members regular credentials, showing that they have been duly elected, etc.; still it is very desirable that the miners should thus meet, in their primary capacity, whenever they can conveniently do so, and select from their number a portion, at least, of the delegation, who shall feel pledged to be present. Such a course will be more likely to secure men of the right stamp—those who will take an interest in the matter, and such as can enter understandingly into whatever subjects may come before the Convention for discussion and adjustment. There is no time to lose, and we trust that prompt and universal action will be taken to make the Convention a success, and a means for furthering the great interest of mining on the Pacific Coast.

INCORPORATION.—The certificate of incorporation of the Roannaise Mining Company has been filed in this city. The trustees are George Platt, John Dunn, and Henry D. Bacon. The latter gentleman, formerly of the banking firm of Page & Bacon, has recently purchased of Mons. Roannaise an extension of the famous Eureka ledge, Grass Valley, for which the sum of $20,000 was paid, and this, we presume, is the claim the company purpose developing. The capital stock of the company is $500,000.

ARIZONA.—We learn from the Arizona *Miner* that Acting Governor McCormick and United States District Judge Backus arrived on the 30th of November, and was received with becoming honors.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

THE AGE OF GOLD-BEARING ROCKS.

BY PROFESSOR ROWLANDSON, F. G. S. L.

NO. IX.

[CONTINUED FROM PAGE 402, VOL. XI.]

SIR RODERICK MURCHISON'S VIEWS — HONOR AWARDED WHERE HONOR IS DUE.

Before quoting the views expressed by this world-renowned and justly celebrated geologist, I take the opportunity of publicly expressing my grateful thanks for the deep obligation which I personally feel towards Sir Roderick Murchison, for the great amount of labor undergone, and ability displayed by him in drawing up his "Silurian System;" for, although I had entered upon the inquiry of the age of gold-bearing rocks somewhat simultaneously with the commencement of Sir Roderick's laborers in Siluria, my researches on this question were commenced from a starting point different from that taken by the distinguished geologist alluded to—mine was taken chiefly from a chemico-metallurgic basis—Sir Roderick's from palæontological and stratagraphic evidence. It is only due to Sir Roderick to state, that up to the period when he published the views contained in the following quotations, all the evidence previously gathered tended not only to show the soundness of his generalization, as based on the facts which had been up to that time positively ascertained in regard to the palæontology of gold regions, but also from their persistency, as far as was then known, necessarily led to a belief, amounting to conviction, that the views originally propounded by Sir Roderick would hold good the world over. In regard to the latter point, I think Sir Roderick will find it necessary, from the evidence supplied by California, to modify his theory to some extent, as to the Age of Gold Bearing Rocks, especially those lying adjacent to this part of the Pacific coast, and possibly some other parts of the world to which attention will be drawn hereafter.

In respectfully drawing the attention of geologists, generally, and that of Sir Roderick Murchison, in particular, to the fact that gold bearing quartz lodes are, on tolerably good evidence, found to exist over a large extent of country, in this and adjoining States, amidst rocks of secondary, and possibly of tertiary age, I feel certain that however much such a view may be in opposition to a very frequently and strongly expressed theory of Sir Roderick, no one more readily than himself will cheerfully admit the soundness of any new view, when reasonably supported, however much that may differ from his own, as previously expressed; and further, that he will most willingly lend all the aid which his position and just influence enables him to so extensively exercise in order to ascertain the true theory of this interesting subject, to the end that it may, if possible, be turned to economic account.

The condition of geology at the time when Sir Roderick Murchison published his "Silurian System," since which nearly a generation has been called into existence and passed away, was something like that of chemistry, as applied to agriculture, etc., when Liebig, only a very few years later, reduced chaotic and dispersed masses of valuable matter and experiments into system. The world is indebted to Sir Rodcrick Murchison for like valuable assistance in regard to geology, and it would be difficult to imagine or describe the debt of gratitude that is due to that gentleman from the present as well as by future generations. Individually, I again tender to Sir Roderick my acknowledgments of the personal advantagee which I have derived in studying geology from an early perusal of his Silurian System. As brevity is said to be the soul of wit, I hope that in thus curtly according my thanks to him a like brevity will be accepted as the essence of sincerity.

SIR RODERICK MURCHISON'S VIEWS ON GOLD-BEARING ROCKS.

Sir Roderick states, at page 474 of his third edition of Siluria:

"Let us first reflect upon the general fact, that, whilst all the stratified formations are composed either of crystalline and paleozoic rocks, or of secondary and tertiary deposits, gold has never been found in any appreciable quantity in either of the two last-mentioned classes of strata. The vast areas, therefore, which are covered by all such younger formations are excluded from the application of our reasoning; and every one who lives in tracts the subsoil of which consists of such rocks, may at once be assured, that he can never profitably extract gold from them.

Having laid down this generalization, which affirms that by far the largest portion of land on the face of the globe never contains gold, we proceed to consider the nature and limits of the gold-bearing rocks, and then indicate how the chief wealth is derived from superficial auriferous drifted materials or gravel.

Appealing to the structure of the different countries which at former periods have afforded or still afford any notable amount of gold, we find in all a general agreement. Whether, referring to the ancient history, we cast our eyes to the countries watered by the Pactolus of Ovid, to the Phrygia and Thrace of the Greeks, to the Alps* and golden T gns of the Romans to the Bohemia of the Middle Ages, to tracts in Britain which were worked in old times, and have either been long abandoned or are now scarcely at all productive, or to to those chains in America and Australia which, previously unsearched, have, in our times, proved so rich—we invariably find the same constants in nature. In all these lands, gold has been imparted abundantly to one class only of those ancient rocks whose order and succession we have traced, or to the associated eruptive rocks. The most usual, original position of the metal is in quartzose veinstones that traverse altered Silurian slates (chiefly Lower Silurian), frequently near their junction with eruptive rocks. Sometimes, however, it is partially diffused through the body of rocks of igneous origin."

"Seeing, on the one hand, that the oldest rock, and, on the other, the medial and youngest deposits never contain gold, and that yet (as will be shown) the metal is of recent accumulation *en masse*, it might seem to follow that there existed in those original deposits which have since become largely auriferous, the elements out of which gold was subsequently brought together in rich veinstones. It is indeed a fact, as will hereafter be shown, that there are fine-grained old schistose sediments in which gold is so impalpably disseminated, that it is difficult to imagine how this diffusion could have occurred if the original menstruum had not contained the elements of the ore. In that diffused state the gold may have remained long after the consolidation of the sediment, until, in ages long posterior, it was run together into metallic veinstones by metamorphic action, or segregated into the lumps and filaments in which it now occurs. But, however we may account for them, the facts are those which I have for many years exposed—viz., that a certain geological zone only in the crust of the globe has been rendered richly auriferous†.

* In truth, as above expressed, every old country of Europe, where the rocks were once auriferous, has long ceased to yield any valuable amount of gold. In reference to the Alps, I am indebted to my learned friend Mr. J. W. Cowell for pointing out to me the following passage in Strabo (Book iv. ch. 6, sect. 12), by which it appears that even Imperial Rome was at one time inundated with a glut of gold from her Northern mountains:—"Polybius says that in his time the gold mines were so rich about [north of?] Aquileia, but especially in the country of the Taurisci Norici, that if you dug but two feet below the surface you found gold, and that the diggings (generally) were not deeper than 15 feet; that in some instances the gold was found pure, in lumps of the size of a bean or a lupin, and which lost only one-eighth in smelting, in others it required more smelting, but was very profitable. Italians aiding the barbarians in the working for two months, gold became forthwith one-third cheaper over the whole of Italy; and the Taurisci discovering this, drove the associate Italians away and monopolized it themselves. At present all gold mines belong to the Romans."

† When preparing this work for press, I received a letter from Mr. Lieber, the State Geologist of South Carolina, which, being explained by a second letter from that gentleman, in reply to one which I addressed to him, contains a little table which clearly expresses his views as derived from his experience in South Carolina and the Brazils. Tracing out the peculiar features of the "itacolumite" and its associated rocks of "itaberite" and "specular iron schist," and a compound of talc and magnetic iron, which he terms "catawberite," Mr. Lieber affirms, that these rocks, together with clay and talcose slates, are chiefly auriferous, and that none of the rocks above them ever bear gold, whilst the mica slates beneath are more less productive of the ore. He consequently classifies the whole in ascending order, as Sub-auriferous, Auriferous, and Post-auriferous—a mineral classification which is in accordance with the data I have long endeavored to establish by geological and palæontological proofs.

To be Resumed.—The line of steamers between New Orleans and San Francisco, suspended by the Rebellion, is to be again in operation. On the 1st of January, the Pacific Mail Steamship Company is to place a steamer on the line from New Orleans, via Havana, to Aspinwall, connecting at the latter place with the steamers to and from San Francisco.

Some of the principal New York hotels talk of raising the price of board to $6 per day. There are families in the Fifth avenue who give $500 or $600 a week for their mere lodging and boarding privilege, while their "extras" will reach $300 or $400 more.

[Written for the Mining and Scientific Press.]

"Gold Bearing Sulphurets and their Reduction."

REPLY TO "A STUDENT OF METALLUGICAL CHEMISTRY."

Messrs. Editors:—I notice in your issue of the 23d ultimo, a communication signed "A Student of Metallurgical Chemistry," in which the motives of my contribution to your journal, of December 9th, are unjustifiably attacked, and the positions assumed by me attempted to be controverted.

I would premise my reply to the author by hinting that the perusal of the gentleman's communication, without the signature, conveys evidence that it is written by a student, and certainly one not very far advanced in his studies.

My object is not concealed, nor is any attempt made at the same. It was written for the benefit of the mining community of California, who have been so often imposed upon by persons entirely ignorant of the first principles of chemistry, claiming to be competent to extract the precious metals from their ores. What has been the result? Valuable mines abandoned, miners ruined, public confidence shaken in all mining operations, and the production of the precious metals limited to about one-third of what it ought to be.

The method invented by myself for the reduction of the precious metals from the gold-bearing sulphurets was not "abandoned as impracticable." On the contrary, it is available for treating sulphurets rich in gold, especially some of those at Grass Valley, but not for those holding so small an amount as $20 per ton where labor is high.

I did not condemn the common reverberatory furnace—these are my words: "By means of this method the precious metals are "freed" when contained in hi-sulphide of iron;" neither was I ignorant that condensing chambers form an essential part of said furnace; alluding to the mechanical loss of gold, I said, "it is loss unless some means be employed for its collection." In copying the manuscript, I inadvertedly omitted the following to complete the paragraph: "This method is too slow and expensive for California."

I did not disapprove of reverberatory furnaces for the purpose of chlorination. Referring to the "Chlorination Process," I spoke of *oxidation* being performed in them previous to the treatment of the mass by chlorine, etc., a process it would appear the "Student" is unacquainted with. I did not discredit the methods of the distinguished Metallurgists, Agustin, Ziervogel and Von Patera; these employ said furnaces for a purpose foreign to the subject in question. My remarks were confined solely to the treatment of gold bearing sulphurets, a subject I profess to understand.

I have nothing to retract concerning "inventions in the shape of furnaces;" two of the said inventors have admitted to me that their inventions did not answer their expectations. I am not at liberty to publish their reasons.

Regarding the peformance of "The Gold and Silver Separating Company's Furnace" (Dr. Hagan's) the "Student" seems to intimate that the crude sulphurets taken for assay did not represent the "*mass* mixed" from which the third assay was made; I will endeavor to enlighten him on this point, thanking him in the first place for correcting a typographical error. It seems the gentleman is an arithmetician, as well as a student of metallurgy. Assay *first* is the mean of five assays made on as fair a sample of the crude mineral as could be obtained; they not disagreeing more than some $30 above, nor $11 per ton less than the mean (not an uncommon occurrence). Assay *third* is likewise the mean of five assays made on the mass after treatment, obtained in a like manner to that by which the sample from which assay *first* was made; these disagreed from $45 above to $26 per ton below the mean, thus showing that a fair sample was obtained. *Sixth* assay of the tailings; this was an assay of the "refuse" after amalgamation; had I made a series of them (I considered it unnecessary to do so), "the aggregate of the extraction and that left in the tailings" might have equalled the amount as per assay third; as it is, I consider assay sixth sufficiently exact for all practical purposes; from these results, along with those of the other three experiments. I considered myself justified in arriving at this fair conclusion, omitting fractions of a per cent., viz: 55 per cent., desulphurized; 16 per cent., lost; 52 per cent. extracted and 32 per cent. left in the tailings. The treated mass was amalgamated, and the amalgam carefully separated by a "Workman" without any apparent loss. Again, the "Student" is unwilling to admit that there was any loss of gold during treatment. I maintain that there was, knowing that fair samples were obtained for assay both before and after treatment. He says: "But aside from this, add the fixed, positive data obtained by the extraction of $205.12 to that shown by assay remaining in the tailings, and we have $205.12+146.12 =$351.24. Now, subtracting this last sum from the assay of the crude sulphurets=$395. 48—351.24=44.24 per ton, or *not quite twelve per cent. loss.*" This *quasi* admitted *loss* from a 55 per cent. desulphurization, or rather say what is warranted by the "Student's" arithmetic, 11.19 per cent., added to 9.15 per cent., corresponding to the complement (45) of 100 per cent., would make 20.34 per cent. loss, provided the whole of the mineral had been desulphurized; so it would appear that the minimum mechanical loss of gold mentioned in my communication (20 per cent.) would have been experienced had the furnace been capable of doing what it is represented to do.

I cannot see the analogy between decarbonizing carbonate of lime and desulphurizing bisulphide of iron. The first is a *proto-salt*, the second a *ternary compound*. Heat decomposes the former, whereas it does not separate the whole of the sulphur from the latter. I do not advance this by way of proof to show that bisulphide of iron cannot be desulphurized in lumps, but merely to show the fallacy of the "Student's" reasoning.

But the "Student" is continually harping on the "effectual method," and naively says: "This method is mainly commended to our confidence, from the circumstance of his being requested to examine the performance of this furnace (using his own words) in my professional capacity." Verily, this is arriving at a conclusion with a vengeance.

Experiments were made by me years ago on sulphurets in lumps, both with steam and without it, for the purpose of desulphurizing them. I always obtained a negative result. On the contrary, I have experimented on "tolerably fine crushed" sulphurets in an arrangement similar to Mr. White's, on the same principle, and obtained desulphurization of the mineral, with the exception of some milliemes of sulphur that was found associated with iron and oxygen; this small portion was not inimical to the extraction of the precious metals from the oxidized mineral by amalgamation.

I am aware that Mr. White's furnace was exhibited to the public at Newark, New Jersey, about eighteen months ago. Several chemists and persons engaged in the business of testing ores witnessed its performance. Some of them gave certificates regarding its merits. One "student" was among the number.

Any competent investigator will find no difficulty in performing experiments to satisfy himself that what I have stated regarding the two furnaces (Dr. Hagan's and Mr. White's) is true. Certainly no candid person will deny that the objections urged by the "student" against the common reverberatory furnaces are overcome in Mr. White's, viz:—"the expense of building and keeping them in repair, the trouble and cost of working the ore properly, and the constant dread of careless and indifferent workmen, upon whom the successful working of the ore chiefly depends."

The cost of Mr. W.'s is less in proportion than the common furnaces, considering the amount of work it is capable of performing. The attendance of one workman is only required to keep up the requisite degree of heat, and feed the hopper with the ground mineral, which discharges itself at the other end, the wear and tear being trifling, while the coil of pipe in the chimney, from which jets of cold water are ejected, acts the part of a condensing chamber, thus securing a compact apparatus as well as a cheap method.

There is an old adage—"The greatest thief always calls thief first." So the "Student's" communication, accusing me of interested motives, will readily convey conviction to the mind of the most obtuse reader, that his object is to holster up a process that had sunk into obscurity, and is now attempted to be revived under a new patent.

The "Student" appears not to confine his glowing intellect to the study of metallurgy only; but assumes to occupy the chair of a modern Chesterfield, and read me lessons upon taste and propriety; yet as I have already lived the greater part of a long life, I would suggest to him that his labors in this behalf are not appreciated. I would also suggest to him that in the scientific world, at least, the names of individuals being given is, to some extent, a guarantee of good faith; and if the "Student" has been more than three months in this city, and is of sufficient age to have experience in the matters in controversy to give weight to his opinions, it might be well for him to shake off his cloak of modesty and let your readers know to whom they are indebted for

the refulgent light he has thrown upon the subject.

I have followed my profession in this city for the last nine years, and must ask the "Student" to forgive me for supposing that my name to my suggestions will not be without its weight.

I assure you, Messrs. Editors, that I am not *paid* for commending Mr. White's furnace, nor for condemning Dr. Hagan's; being actuated solely with a desire to have introduced an effectual and cheap method for reducing the gold bearing sulphurets of California.

In future I will not answer any more anonymous communications on the subject; but may at some other time devise means whereby the merits of the one and the demerits of the other furnace may be established to the satisfaction of the mining community of California.

JOHN SCOTT,
Metallurgical Chemist.

MECHANICAL AND AGRICULTURAL COLLEGE FOR THE STATE OF NEVADA.—On Wednesday of last week the five Commissioners appointed by the Board of Regents of the above-named College, held a meeting in Washoe City, Nev., and perfected their organization by the election of a presiding officer and a Secretary. The law contemplates that this school shall be established and maintained by the means of voluntary contributions from the citizens of the State of Nevada.

EARTHQUAKES.—The Mendocino *Herald* says that there was a heavy shock of an earthquake felt along Dry Creek, in the lower portion of Mendocino county, on the 15th ult. It occurred about nine o'clock in the evening; there were nine distinct shocks felt—three of them quite heavy.

The inhabitants of Payette Valley, Boise county, Idaho, were recently startled at an early hour in the morning by the shock of an earthquake, which was sufficiently heavy to cause the cattle and horses to tremble, and run about frantically with fear. Animals appear to be peculiarly susceptible to fear from earthquake shocks. We see frequent mention made of the fact on this coast, and have also heard descriptions thereof from eye-witnesses. A more careful noting of the effects of such phenomena in animals would be interesting.

NEW VOLUMES.—The Marysville *Appeal* has entered upon its thirteenth volume, as its editor says, "with financial prospects more flattering than ever." We congratulate our cotemporary on the success to which it is most certainly entitled.

The Monterey *Gazette* has announced its third volume. The editor says it is doing as well as could be expected—in Monterey county; and has demonstrated the fact that a paper *can* be published on starvation prices. We regret that our cotemporary is obliged to put forth so unsatisfactory a record, and trust the past will prove no index for the future.

The Territorial *Enterprise* announces the commencement of its eighth volume on the 19th ult. We well recollect when that paper was started, and have enjoyed the pleasure of constantly perusing its columns, and witnessing its gradual growth up to the present time. The only time we ever visited the office was when it was printed in a blacksmith shop—and a poor one at that—in Carson. Col. Williams was then its presiding genius. "Commencing its existence in an almost unpeopled waste, the *Enterprise* has been borne along on the advancing tide of improvement from Genoa to Carson, from Carson to Virginia," until it is now one of the largest and most enterprising dailies on the Pacific coast. May it long live and flourish! The first number of the new volume contains some two columns of interesting extracts from its early issues, showing the early progress of the Territory, and developing the stages of the mineral discoveries there from 1858 to the present time.

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Now in Press—Mining and Scientific Press Book and Job Office.]

[*Continued from Page 405, Vol. XI.*]

ON QUARTZ AND MINING MACHINERY.

Committee:

J. A. HOBART. JOHN ROACH. WM. H. SCOVILE.

Varney's Pan.—This pan has a great and wide-spread celebrity. All the points of superiority claimed for it could not be embodied in a brief report by the committee. Having seen it in operation at the Exhibition, the committee recommend it as a valuable pan, and award it a silver medal.

Wheeler & Randall's Pan.—This pan is of the latest model. In the small pan on exhibition (95) ninety-five pounds of very refractory rock, of bean size, was reduced to a fine pulp in (55) fifty-five minutes. The working of the pan gave satisfaction, and the committee deem it deserving of a silver medal.

Baur' Pan.—This machine combines, as claimed, a grinder, amalgamator, and separator. The pan is shallow, with a convex top rising to the center, at which point the rejected material is discharged into a sluice-box on the outside. The material to be treated is fed by a hopper on the side; where a stream of water carries it down. A continuous flow is kept up, if desired, and when the pulp, or other matter, is sufficiently ground, it is floated off, while the metal or heavy particles are allowed to be kept in longer contact with the quicksilver. The charging of this pan is continuos, and may be carried on until the amalgam is sufficiently strong, thus avoiding repeated charging and cleaning. The committee award it a silver medal.

Concentrator.—To J. Hendy, who exhibits a Prater Concentrator, the committee award a certificate of merit.

Concentrator.—By A. Hanter, who exhibits a Concentrator and Amalgamator, which has been working to the satisfaction of the committee, who award him a silver medal.

Crusher, by Henry Pearce, who, towards the close of the Fair, entered it for exhibition. The short time this machine was on exhibition, and the rules of the Fair, excluded it from taking a premium. The committee, thinking favorably of it, recommend an award of a certificate of merit.

Soap Stone Machine, by John Dougherty.—This was a rough contrivance, showing much ingenuity, the saw working upwards, thereby cleaning itself from the dust it makes, and cutting the stone remarkably fast. The committee deem it worthy of a certificate of merit.

In concluding their report, the committee would state that, desiring to be just to all parties exhibiting, they have listened attentively to explanations from the proprietors of Reducers and Amalgamators combined. The committee regret, however, that the Fair has not afforded facilities for a practical testing of the superiority of the machines offered for competition, and they, therefore, feel it their duty to withhold a first or special premium from either of the exhibitors of this class.

ON CORDAGE.

The only cordage manufactory on this coast is the San Francisco Cordage Manufacturing Co., Potrero, Tunns & Co., agents. The samples exhibited (some seventeen in number) were an assortment of the different kinds made by this company for sale, comprising grades of every description, ranging from the lightest hay-rope to the heaviest hawsers. The cordage of this company is superior in some qualities to the best imported, and is steadily driving out all competitors from this market. The company commenced business in 1856, cordage being one of the pioneer manufactures of California. Since that time the company has steadily increased the quantity of its manufactures, constantly adopting all improvements in cordage machinery as they became known, until now the works are equal in extent to any in the United States. This company possesses two important advantages over Eastern manufacturers for the market, *i. e.*, a closer proximity to the sources of supply of the raw material, and the advantage of manufacturing it into such sizes of cordage as the market may at that time require.

The annual consumption of cordage of all kinds in this market is about 1,300 tons, seven-eighths of which is made at the works at the Potrero, where 1,200 tons of hemp are consumed yearly. The company, with their present running machinery, can manufacture 2,000 tons of hemp per annum, and have additional machinery on hand for contingencies, and steam-power to run it. During the past year the manufacturing capacity of the works has been largely increased, a new engine and boiler of 150-horse power being substituted in place of the one formerly used of half that power. The walk has been extended to 1,500 feet in length—the largest in the United States. Single lengths of rope, 1,000 feet long, have been made, and the company can manufacture, with present facilities, 1,200 feet in length, and, with but little additional expense, make them still longer. A bawser, fourteen inches in circumference, has been made at the works, which are competent to make others up to twenty inches in circumference, if required. Fifty men are constantly employed at these works, about one-half the number being Chinamen, who are engaged in light work, such as in the Atlantic States is done by boys and girls. No substitute for Manilla hemp is grown in the State, although it is reported that a wild vine, which grows luxuriantly near Santa Cruz, furnishes a staple strong and fine like silk, the fibre being very long.

For superior quality of cordage, exhibited by the San Francisco Cordage Company, the Committee award a silver medal.

ON PAPER, BOOK-BINDING, PRINTING, ETC.

Committee:

FRANK EASTMAN, A. J. CORTES, WILLIAM ALLEN.

Report the following as the result of their labors:—The display in this department was not so extensive as the committee wished, but was very interesting, as showing the ability of manufacturers to produce within this State everything within the line of paper (excepting writing or sized paper,) that is needed on the Pacific coast. The importance of paper manufacturing to this State alone can be understood when it is stated that the present consumption of paper, for all purposes, in California, equals half a million of dollars per annum. Although struggling under many drawbacks, such as increased cost of imported material, transportation and labor, our manufactures have already driven some kinds of imported paper from the market, thus giving employment to many and retaining money in the State.

Paper.—To S. P. Taylor, proprietor of the Pioneer Paper Mills, for exhibition of largest assortment of different kinds of printing and wrapping paper, and straw boards of excellent quality—awarded a special premium of a silver medal.

Paper.—To the San Lorenzo Paper Mills, Wm. P. Harrison, Agent, for exhibition of same articles, equal in quality, but not of so many varieties, a special premium diploma.

Book-Binding.—To George B. Hitchcock, for exhibition of a case of blank books of San Francisco manufacture, they being excellent in quality, style of binding and ruling—awarded a silver medal.

This report was unanimous, with the exception of that portion relating to book-binding, which was signed by Mr. Eastman, but dissented from by the other members of the committee on the ground that the books "were not bound expressly for exhibition." These members of the committee, therefore, did not consider the books a fit subject for a prize or for essential merit, but regard them "simply as a fair sample of a style of binding, ruling and finishing, but not entitled to a special award or premium.

Newspaper Printing, by Dewey & Co., San Francisco.—For specimens of newspaper printing—bound volumes of the "Mining and Scientific Press," awarded a diploma.

ON WOOLEN MANUFACTURES.

The manufacture of woolen goods is one of the large mechanical interests of California. Removed so far from a manufacturing market, for many years woolen goods, extensively worn by all classes of population, brought high prices, and contributed largely to the flow of precious metal that yearly left the country to pay for imports. By a strange anomaly, California, while importing woolen goods at high prices, at the same time exported large quantities of excellent wool suitable for the needed manufactures. Between the two the wool-growing interest was depressed, and, as far as woolen goods were concerned, the country drained of money.

The opening for the manufacturing of woolen goods was, in 1858, deemed profitable enough to counter-balance the high rates of interest that then prevailed, and the Pioneer Woolen Mills Company was at that time formed, and during the following year introduced its manufactures (Blankets) in competition with imported goods with a favorable degree of success. In 1859 another association, for the manufacture of woolen goods, was formed, under the style and name of the Mission Woolen Mills Company, which commenced operations the next year.

In the present Fair the latter company did not exhibit their manufactures. The display of their products in the Fair of the preceding year was both interesting and valuable. As one of the great manufacturing companies of the State, a few facts as to the extent of manufacture and capacity of this company may be appropriate: The capital stock of the company is $500,000; the works last year consumed over 1,200,000 pounds of fine wool, which was manufactured into 32,000 pairs of blankets, nearly 500,000 yards of flannels, and over 100,000 yards of cloths and cloakings. The present machinery includes 11 sets of cards, 3,500 spindles, and 50 broad-power looms, of the best and most modern description found anywhere in the world.

At the present Fair, the Pioneer Woolen Mills Company made a very large and excellent display of goods of their manufacture, which would be considered creditable in any State. As the pioneer woolen mill of California, which at the present time possesses only two establishments of the kind, the following description may be interesting and useful:

The Pioneer Woolen Mills, which was started in 1859 by the firm of Heynemann, Peck & Co., was destroyed by fire in 1861, and was formed into a stock company, with a capital of $150,000. December 2d, 1861. The present building and out-houses occupy ten fifty-vara lots at Black Point. The machinery consists of 9 sets of cards, 14 jacks, 2,800 spindles, and 36 looms. The engine is of 200-horse power, but is only worked up at present to 90-horse power, leaving a large capacity of engine for a contemplated increase of machinery. The mills consume 1,000,000 pounds of wool per year, and will probably exceed this amount 100,000 pounds in 1865. The works employ 225 men, and manufacture all kinds of blankets, cassimeres, and flannels. The greatest portion of flannels produced, such as checked, scarlet, blue, grey, and white, being manufactured in the premises into flannel overshirts, undershirts, and drawers, which compare favorably with price of Eastern goods, and give far more satisfaction to the consumer. The company contemplate increasing their stock capital to $300,000, and orders for a large amount of machinery have been forwarded to the East. The Board consists of F. P. Solomon, President; L. Cohn and A. Block, Directors. Heynemann & Co., 311 to 317 California street, are the agents for the sale of goods.

Between the above-named companies over a million of dollars is yearly retained in the State, and employment in the manufacturing departments directly given to nearly 600 persons. So successful have the woolen mills of California been in their manufactures, that at the present time they have driven out almost all imported blankets and flannels of every description, and promise in a few years at most to do the same with the heavier and coarser qualities of woolen goods. Aside from the value of woolen goods manufactured, the establishment of these mills, by their competition and selections of wool fleeces, have, indirectly, enhanced the value of the entire wool crop of this State and Oregon, and it is not an extravagant estimate that the annual wool crop has been increased $300,000 in value to the grower.

The Pioneer Woolen Mills of San Francisco were, at the present Fair, awarded the highest prize or award made, viz., the "Institute Medal." This medal, the first of the kind ever awarded by the Mechanics' Institute, was designed for that invention, manufacture, or industrial product which should be decided to hold out promise of the greatest practical benefit to the people of California. In accordance with the decision of a Committee, of which the Governor of the State was Chairman, the medal was awarded to the Pioneer Woolen Mills of San Francisco. The following is the report:

Award of the Mechanics' Institute Gold Medal, 1865.

To the President and Executive Committee of the Mechanics' Institute:

GENTLEMEN:—Your Committee, appointed to award the *Institute Gold Medal* to that branch of industry which in their estimation promises to be of the most benefit to the State, have to that end made an examination of the various articles on exhibition, and are of the opinion that the *manufacture of woolen goods*, as represented by the productions or the *Pioneer Woolen Mills*, is entitled to the medal. It is therefore awarded to the Pioneer Woolen Mill.

F. F. LOW,
H. W. HALLECK,
H. P. COON,
J. M. ECKFELDT,
} *Committee.*

SAN FRANCISCO, September 9th, 1865.

ON CLOTHING.

Committee:

J. C. MITCHELL. JAMES SCRIMGEOUR. G. W. RAMAGE.

The Committee having made examination of the articles exhibited in this department, report:

Gent's Clothing, by I. Joseph & Co., San Francisco, who exhibit two suits of gent's clothing and cloaks, which are the best, both in cut and workmanship.—Awarded a first premium.

Children's Clothing, by C. A. Fletcher & Co., San Francisco, who exhibit two children's suits and child's cloak, of superior taste and workmanship. Awarded a second premium.

SALES OF THE WEEK

BY THE S. F. STOCK & EXCHANGE BOARD.

Men's Clothing, by J. H. Hammond, who exhibits three suits of men's clothing. There being no competition, the Committee do not report on their merits. For a military coat of superior make and finish—Awarded a silver medal.

Cotton Wadding and Batting, by Greenberg & Co., San Francisco, who exhibit specimens of both articles, of California manufacture, equal in quality to that imported.

Rubber Clothing, by the "Rubber Clothing Co.," San Francisco, who exhibit samples of rubber clothing and cloth, and a case of fancy articles, which the Committee assumed to be of the same material. These are imported goods of excellent quality. The fancy goods exhibited a very great improvement in the variety of design, as well as quality of manufacture.—Awarded a certificate of merit.

ON GENTS' FURNISHING GOODS.

Committee:

H. B. PLATT. LEWIS LELAND.

The Committee report that, after a careful examination of the gentlemen's furnishing goods, they recommend the medal to be given to Mrs. Morris, for the best home-made shirts, collars and wristbands exhibited.

The Committee also favorably notice the excellent line of imported goods exhibited by S. W. H. Ward & Son.

ON BOOTS AND SHOES.

Committee:

G. M. NICHOLS. JAMES H. SWAIN.

Boots and Shoes, exhibited by Koenig Brothers, for general workmanship, awarded a first premium.

Ladies' Gaiters, by W. F. Burke, San Francisco, who exhibited a showcase of ladies' gaiters. Mr. Burke made a fine display of good work and fine finish, which are superior to anything of the kind imported.—Awarded a silver medal.

Boots and Shoes, by P. Kelly, San Francisco, one case California boots and shoes. The quality of material and workmanship of these boots and shoes, are unsurpassed. Awarded a silver medal.

ON CLOAKS, ETC.

Committee:

MDE. H. J. LA MARCHE. MRS. E. W. HITCHINGS.

For Cloaks, by Kerby & Byrne, San Francisco, for superior workmanship and finish, a first premium.

Cloth Basque, by Meyer & Jonasson, San Francisco, for fine quality and finish, a second premium.

Mantillas, by J. L. Ney, San Francisco.—This mantilla-work is awarded a certificate of merit.

ON FURS, HATS AND CAPS.

Committee:

J. K. WHITE. T. YOUNG. J. C. MUESSDORFFER.

The Committee report as follows:

Sable and Mink Goods, by A. Muller; also best general assortment of manufactured furs.—Awarded a first premium.

Ermine and Muskrat Goods, by I. C. Mayer & Sons.—Awarded a first premium.

Silk Plush Hats, by Van Tassel.—Awarded a first premium.

Military Caps, by Blake & Co.—Awarded honorable mention.

ON EMBROIDERY AND FANCY NEEDLEWORK.

Committee:

MRS. A. DANNENBURG. MRS. H. L. DAVIS.

The Committee have examined the various specimens of embroidery and fancy needlework exhibited at the Fair, and recommend the following as worthy of first premium:

Crochet Bed Spread, Miss Rosa Hielboon, a first premium.

Patch-Work Quilt, by Mrs. M. D. Willis, a first premium.

Silk Embroidered Bed Quilt, by Miss M. Tolle, a diploma.

Scarfs, Dresses, Shoes, etc., by Mrs. R. C. Alden, a first premium.

Crochet Tidy, by Mrs. S. Van Roon, a first premium.

Worked Chemise and Pillow Slips, by Mrs. N. G. Kittle, a first premium.

Embroidered Handkerchiefs, by Mrs. B. Velasco. The Committee, in view of the excellence of these articles, award a certificate of merit.

Mathematical Model for Cutting Dresses, by Mrs. Margaret Curtis. The Committee found this system simple and reliable, and one of great utility and assistance to those requiring an instructor in cutting ladies' and children's dresses—it being a perfect guide in dress-cutting. The Committee therefore award the article a diploma.

Regalia and Military Goods, by Daniel Norcross, San Francisco, a most superb assortment of gold and silver embroidery on regalia and military goods.—Awarded a diploma.

Skillful Embroidery, by Mrs. John Harding, late Mrs. P. E. Rogers, San Francisco, for beautiful embroidery.—Awarded a silver medal.

Chenille Work, by Mrs. Mary Gray, of beautiful design and skillful execution. Awarded a diploma.

Worsted Work, by Mrs. E. M. Cottrell, a most beautiful specimen of this kind of work.—Awarded a diploma.

SCULPTURE.

Committee:

F. A. BUTMAN, W. A. JEWETT, O. GORI,
F. ARRIOLA, V. SQUARZA.

There were but few exhibitions in this department of the late Fair, excepting the works of Mr. Mezzara.

Some half dozen images in marble (importations), placed about the fountain, which were not entered for competition, require, we presume, no particular mention. Also, one of the same in the Art Gallery, "Samuel," of Biblical history, probably copied from the plaster cast so common, and from the original idea of Benjamin West.

There were on exhibition, by Rogers of New York, and loaned by kindness of Messrs. Jones, Wool & Sutherland, a collection of beautiful statuettes, in plaster, illustrating events of soldier life in the late Rebellion. As works of art they are worth more than a passing notice, exhibiting as they do a force of character and expression, and truth to nature, that tells the story far better than the artist could have done in words. A number of them are worthy of being executed, life size in marble.

One mantel, in Vermont white marble, designed in good taste, and finely finished, was exhibited by John Daniel.

There were on exhibition several plaster busts by Mezzara, one in particular finely modeled and true to nature. Also a number of cameos, cut by the same artist, which we think could not be excelled for fine workmanship and artistic effect.

In the United States, thus far, cameo cutting has attracted but little attention, though in Europe it is held in high estimation, taking rank alongside with works in gold and silver, and dating as an art long anterior to the time of that prolific genius, cameo cutter, worker in gold, silver, and bronze, and sculptor, Benvenuto Cellini.

A colossal statue in plaster, of Abraham Lincoln, by P. Mezzara, was placed in a very bad light and position to be seen to the best advantage. In the modeling of this work the artist has had many obstacles to overcome. First, its size (ten feet in hight) presents not a few difficulties not encountered in the life size; secondly, the well-known want of anything like grace and beauty (without it was the homely beauty of an honest expression) in the outward appearance of the subject; and, lastly, the prejudice existing against clothing statuary in modern costume.

There has been much said about this last work by Mezzara, and all that we have heard has been on one side. We propose in this place briefly to tell both sides of the story—to speak of its merits as well as of its faults. The ideas of the artist engrafted in the work are truthful to the character of Mr. Lincoln and the history of his time. He is represented with the left arm extended, holding in that hand the "Emancipation Proclamation," in the act of reaching out and proclaiming freedom to the slave. The right arm falling by his side, with the half-opened hand covering and shielding with its protection a scroll representing the Constitution of his country. Under his right foot are allegorical images of Slavery and Rebellion; on the Tree of Life, by which he stands, is a representation of Union. The cast is well finished, as may be seen by the photograph taken before it was placed on exhibition in the Pavilion, which shows the statue to much better advantage than could be seen from any point of view in the place it occupied during the Fair.

The lines of the costume, and some points in the figure, are too sharp and angular, and the left arm is too long. The attitude is dramatic—this was not at all a characteristic of Mr. Lincoln—but the expression of the head and face is fine, and, we should judge, a good likeness.

It is a bold attempt to produce a colossal statue, clothed in modern costume, and some parts of the work are open to a justly severe criticism, yet we think it should not be criticised without giving to the artist the credit which he really deserves.

For Mr. Mezzara's general work we recommend a special premium. Awarded a gold medal.

ON OIL PAINTINGS.

Committee:

P. MEZZARA, T. A. PARRY, FERDINAND VASSAULT.

The Committee report as follows:

Portrait Painting, by Fortunato Arriola. Awarded a silver medal.

Landscape Painting, by F. Butman. Awarded a silver medal.

Oil Painting, by Nahl Bros. & Dickman. The best oil painting in the exhibition. Awarded a silver medal. This painting deserves especial mention for its exquisite drawing and color, and for the life-like impatience of the horse, whose superficial anatomy is delineated in a manner evincing long and careful study. The rider is a graceful-looking horseman, correctly costumed, and beautifully painted.

The Committee regret that there was no competition in the branches to which they have made the various awards.

Lithograph, by Loomis & Swift. Awarded a first premium.

Lithograph, by G. H. Baker. Awarded a second premium.

ON PHOTOGRAPHY.

Committee:

FORTUNATO ARRIOLA. P. MEZZARA. F. E. MILLS.
W. S. JEWETT.

In this department of Art you have assigned us a most difficult duty. To discriminate fairly between the merits of the different contributors in this beautiful and popular branch of Art, where the excellencies of all are so nearly equal, is no easy task. The conclusions arrived at in this Report are the result of careful comparisons, and are given with the hope that they may be charitably received, if we have erred in judgment.

The present collection of Photographs, including plain and retouched in India ink and water colors, is undoubtedly the finest ever exhibited in San Francisco, and is creditable in the highest degree to the various artists. Indeed, we think this exhibition of photographic skill could not be excelled by any display of the kind in any city. California, though young in years, is not necessarily young in Art, especially in this branch, where we have so many elements of its success in our fine, clear atmosphere, our wealth, and the refined taste of our people. Photography, as well as other branches of Art, must and will excel here, if progressing under a kind spirit of emulation and just and intelligent criticism.

Perhaps, in this connection, it will not be out of place for your committee to remark, that by intelligent criticism is not meant the sarcastic and malicious remarks too often indulged in by writers on Art. There is no intelligence or judgment manifested in criticism of that style. The artist learns nothing by it, receives no encouragement, but goes about another work as blindly as before, thinking all the time of the stigma of ridicule to attached to the result of his labor and study, when he should have been pointed out, no matter how severely, if kindly, the right direction, analyzing and reasoning out its merits and its faults. There are others who, though not sarcastic in their criticisms, condemn that which is really meritorious in a work of Art because it does not attain to their standard; and this standard being far beyond the reach of most artists, they necessarily condemn nearly everything coming under their notice.

To proceed with the duty before us, we find in the collection of Bradley & Rulofson, and Addis & Koch, the best plain photographs on exhibition, and recommend to each a first premium of equal merit, awarding them in this manner, for the reason that we found it exceedingly difficult to decide between the two best competitors.

There are also fine specimens of plain photographs in the collections of Nahl Bros. and Jacob Shew, to whom we award equally the second premium.

For the best *general* collection of life and cabinet-size photographs, retouched in India ink, we award the first premium to Bradley & Rulofson.

There are, however, single specimens of this class in some of the collections of the other exhibitors, which are not excelled in the Art Gallery; particularly several finely-worked pictures in ink, of hunting scenes in the collection of Nahl Brothers and Bradley & Rulofson—beautiful specimens of the art of landscape composition.

The second premium for largest sized photographs, retouched in India ink, we award to Jacob Shew.

CARD PHOTOGRAPHS.

There are a few specimens of cards, by Jacob Shew, equal, if not superior, to any others on exhibition, for which we would recommend a special premium.

But for the best *general collection* of standing and sitting pictures in this department, we award the first premium to Bradley & Rulofson; and for the best *general collection* of vignettes in this department, we award the first premium to Addis & Koch.

The second premium for best general collection, to Jacob Shew.

For the best photographs, worked in water colors, first premium to Nahl Bros. The superior merit of Messrs. Nahls' pictures in water colors, is their brilliancy and harmony of color, strength, delicate finish, and truth to nature.

Second premium for water-colored photographs, to Mr. Winter. The pictures by Mr. Winter show careful finish, are free and artistic in touch, and exhibit fine harmony and delicacy of color in the draperies. But, although the flesh is warm and transparent, it is wanting in truth of color, especially in the shadows.

These, we think, are some of the merits and the faults in the beautiful picture of the three young girls, which is one of the most pleasing exhibited in the Art Gallery. The grouping is natural and picturesque.

The photographs in water colors, by Addis & Koch and Bradley & Rulofson, deserve especial mention for their beauty and harmony of coloring, free and artistic handling of drapery and backgrounds. The flesh coloring is strong and vigorous, but is somewhat wanting in truth to nature. In the last named collection there are many very beautiful pictures, both large and small.

For best "Ivorytypes."—First Premium to Addis & Koch. The small pictures in this class are delicate and very pleasing. The largest ones—cabinet size, with full length figures, have very finely painted backgrounds, but the flesh coloring wants the force and brilliancy of the surroundings.

There are specimens of a new style of picture—photographs on porcelain, painted in water colors, in the collection of Nahl Bros., which are exquisitely beautiful, having all the transparency, delicacy and beauty of miniatures on ivory. For which we award the first premium.

The photographs of California landscapes, by Watkins, are too well known and appreciated to require an extended notice here. The point of sight in most of the views is chosen with rare judgment—points representing the finest combination of lines and picturesque beauty. This excellence, added to many others, place them high in the catalogue of superior productions.

For these pictures, so universally admired both at home and in Europe, we recommend the first special premium.

The photographic landscape views, in and near the city of San Francisco, by Klain, are, some of them, fine specimens of the art—clear, sharp, and well toned. Awarded a first premium.

Lawrence & Houseworth had on exhibition a large and beautiful collection of sterescopic views, of mountain, valley, lake, and river scenery in California.

RESUME.

Bradley & Rulofson—First premium for large photographs, re-touched.
" " Special premium for plain photographs.
" " First prem. for card pictures, standing and sitting.

Addis & Koch—Special premium for plain photographs.
" " First premium for ivorytypes.
" " First premium for card vignettes.

Jacob Shew—Special premium for card pictures.
" " Second premium for large photographs, re-touched.
" " Second Premium for general collection card pictures.
" " Certificate of merit for plain photographs.

Nahl Bros—First premium for water-colored photographs.
" " First premium for porcelain pictures.
" " Certificate of merit for plain photographs.

Robert Winter—Second premium for water-colored photographs.

C. E. Watkins—Special premium for mountain views.

M. Klain—Special premium for city views.

Lawrence & Houseworth—Diploma for sterescopic views.

ON MISCELLANEOUS ARTICLES.

Committee:

C. H. HARRISON, H. W. BRADLEY, P. J. O'CONNOR.

Owing to the varied character of the articles submitted to them, the committee, in the absence of owners or other persons to explain the improvements claimed, and their uses have found it difficult to judge as correctly as a more extensive knowledge of the merits of the articles would have admitted.

Lever Jacks, exhibited by Leffel & Meyers, Portland, Oregon.—These jacks are first rate for all railroad purposes, being quicker of action than either the screw or hydraulic jack in common use.

Army Printing Presses, exhibited by G. W. Edwards, San Francisco.—These presses are of Eastern manufacture, are of fine appearance, and possess many good qualities.

Job Printing Press, exhibited by A. N. Rood & Co.—Of Eastern manufacture and good appearance.

Straw Hats and Bonnets, exhibited by the Pacific Straw Works, San Francisco.—This exhibition comprised a case of straw hats and bonnets; also the machinery for making them. The machinery is ingenious and the workmanship good. Awarded a silver medal.

Self-emptying Bucket and Windlass, exhibited by J. S. Fogg, Oakland. This bucket and windlass are for well uses. The principle is ingenious and appears to work well.

Wind-Mills, exhibited by Atwood & Bodwell, San Francisco.—Awarded a diploma.

Mining Car, exhibited by C. Roberts & Co., San Francisco.—This car is of good strong manufacture, the plan of working the tail-board being new, simple and ingenious. Awarded a diploma.

Improved Soda Machine, exhibited by W. R. Frink, San Francisco.—This is an improved soda machine, the patent for which has been applied for by Mr. Frink. The main feature is the supplying the materials by means of pumps. The machine is a finished specimen of coppersmith work. Awarded a diploma.

Gas Machine, exhibited by Blake & Co., San Francisco.—This machine is of Boston manufacture. No test having been made with it, the committee were unable to judge of its merits.

Rope Covering for Hydraulic Hose, exhibited by J. L. Moulthrop, Miners' Foundry.—This is a very ingenious improvement for the protection and strengthening of mining hose, and deserves the careful attention of hydraulic miners. Awarded certificate of merit.

Duncan's Patent Steam Packing for Pistons, exhibited by Henry S. Smith, Golden State Foundry.—The construction of the piston head and rings being such that the rings are not bound or held fast by the head. The rings being cut in sections, they are allowed to move freely, readily adjusting themselves to untrue cylinders. They can be made much narrower, thereby avoiding friction; the steam forcing them out to their bearings, they require no springs or bolts, and the body of the piston not requiring to be filled with steam, but only a very small space, makes no loss of steam. They can readily be fitted to old pistons of any style.

Life Raft, exhibited by E. Hawthorne, San Francisco.—This raft is suitable for pontoons for army use, or for ferry use, or for floating stages around a ship. It is cheap, light, and easily constructed.

Cases of Stuffed Birds, exhibited by Lorquin, San Francisco.—Excellent specimens of the art, and beautifully arranged.

Eggs, Dyed and Engraved, exhibited by G. F. W. Richter.—The idea is ingenious, and the execution beautiful—the eggs being a great curiosity.

Horse Shoes, Pincers and Hammers, exhibited by Misgill & Cooper, San Francisco.—These are excellent specimens of workmanship.

Grate Bars, exhibited by Devoe, Dinsmore & Co., San Francisco.—A new style of bar, calculated to burn small coal, give a better draft, and last much longer than the old style. They are well worthy of attention.

Trunks, Valises and Carpet Bags, by James Longshore & Co., San Francisco.—The specimens exhibited were of excellent workmanship and appearance, and apparently of a very durable character. Awarded a diploma.

Plaster Ornaments, by Samuel Kellett, San Francisco.—For beauty of design and excellent finish, awarded a silver medal.

Iron Safe, by J. Weichart, San Francisco.—An excellent safe for the purpose intended. Awarded a diploma.

Gold, Silver and Copper Preparations, by J. A. Bauer, San Francisco. These consist of nitrate of silver, sulphate of copper, cloride of gold, and sodium, all prepared by the exhibitor. The nitrate of silver is used extensively in photography, about a ton of silver being used every year for that purpose, in the United States. Bauer claims a new method of obtaining sulphurets of copper, for which he has applied for a patent. Awarded a diploma.

Distilling Oils. Samples exhibited by E. Benoist, San Francisco, who has distilled lubricating and burning oils of most excellent quality. Awarded a diploma.

Combined Faucet and Measure, exhibited by E. D. Mitchell, San Francisco. This is an Eastern invention, and is a very ingenious, cleanly and economical method of measuring liquid from a barrel or tank, through the faucet at the time of drawing.

Boot-Blacking Machine. This machine, by A. E. White, is of California invention, and is said to be the first of the kind ever invented. Its construction shows considerable ingenuity, and its effects a considerable saving of time, a pair of boots being cleaned and handsomely polished by it in a half-minute. The committee awarded a certificate of merit.

Blow Pipe, by Joshua Hendy, San Francisco; two blow pipes. These blow pipes are constructed with valves, by means of which a small India Rubber bladder is filled with air, from the mouth of which, by the contractive force of the bladder, the air is thrown out of the point of the blow pipe in a continuous stream. This flow of air is also held under the controll of the operator by means of his finger, which, when pressed upon the neck of the bladder, either reduces the current or entirely cuts it off, as may be desired. Awarded a certificate of merit.

Fire Works, Church & Clark, San Francisco, who exhibited a large variety of ornamental fire works. This firm manufactures very largely of fire works, which have a first-class reputation in this market for brilliancy of colors and unfailing execution. The display made by Church & Clark on the opening night of the Fair, is said by good judges to have never been excelled, in good quality, by any display in San Francisco, or elsewhere. Awarded a diploma.

Fire Works, by Tripp & Robinson, who exhibited a fine assortment of patterns of ornamental fire-works. The display made by this firm on the closing night of the Fair was a very beautiful one. Awarded a diploma.

Shoe Lasts, by Brown & Butters, Oakland—nine shoe lasts manufactured at the Pacific Last Factory, Oakland. For excellence of model and good workmanship, awarded a certificate of merit.

Cooperage, by F. Nehrlich, San Francisco. Mr. Nehrlich exhibited a most excellent specimen of his workmanship, in the form of a mammoth cask or wine vat, capable of holding 534 gallons. Awarded a diploma.

Self-Regulating Bench Planes, by Mullear & Bender, San Francisco. This is a California invention, designed to avoid the delay and inconvenience experienced from the clogging of the plane, as ordinarily constructed. This improvement prevents clogging, and the cutting iron being firmly held, no vibration can occur, so the tool does its work neater and with less force than the instrument now in general use. Awarded a diploma.

Cedar Boards, by Macdonald Bros., San Francisco. The sawing of these boards reflects great credit upon the operators, the great accuracy of lines, and smoothness of surface being remarkable. Very large quantities of Spanish Cedar are now used in various branches of trade in California, mostly for ornamental and cabinet work, and the perfect sawing of the same is a nicety in the art. Awarded a silver medal.

Back Boards, by Macdonald Bros., San Francisco. For excellence of workmanship, awarded a diploma.

Sawed Lumber, by Joshua Hendy, San Francisco, one lot gang circular sawn lumber. This lumber was sawed by one of Hendy's gang circular saw mills, said to be the only mill that saws dimension lumber direct from the log, by one movement of the carriage. For evenness of dimensions the lumber is decidedly superior to any sawed by the ordinary circular saw. Awarded a silver medal.

Redwood Lumber, by Macpherson & Wetherbee, San Francisco, who exhibited two redwood planks, seven feet five inches wide, and twelve feet long—clear, without knot or blemish. These planks were sawed at Noyo River Mills, and are said to be the widest ever sawn. The exhibitors encountered great difficulty in getting a saw of size sufficient for the purpose. They sent an order to the agents of Spear & Jackson, in New York, for a 12-foot sash saw for the purpose. As 10-feet saws were the largest ever made by that celebrated firm, the agents on receiving the order, fearing an error, wrote back to Messrs. Macpherson & Wetherbee to that effect; when the order was repeated, followed by an order from New York to England for a steel plate to be made of the requisite size. As a specimen of the immense growth of the redwood timber which abounds on our Northern coast, the planks are very instructive. During the holding of the Fair, parties wishing to exhibit the capabilities of California for the production of timber, desired to purchase the planks to send to the Great Exhibition to be held in Paris in 1867. The owners, however, have declined to sell the same, preferring to donate them to the Agricultural Department at Washington. Awarded a silver medal.

Mining Summary.

CALIFORNIA.

PLUMAS COUNTY.—A correspondent of the Downieville *Messenger*, writing from Saw Pit Flat, says that the Eagle company is taking out gravel that is tinted handsomely with gold. The foreman recently took out a pan of dirt which yielded $29. The Franklin company are pushing the main tunnel back in search of another channel in the hill. Last week the company raised at the end of the tunnel, and found gravel that promises well. The Union company is busy taking out and piling gravel of prime quality,

The New York company is opening out in gravel that shows unmistakable signs of richness—pieces of gold being picked up every day.

The Monitor Company is getting handsome pay; the company made a washing, week before last, and cleaned up $3,500 from a run of three days.

The American company, on the opposite side of the hill, after battling nearly ten years with the hed rock, have raised a shaft forty feet over the back of the tunnel, and found gravel that promises to reward them for their toil, which pays from three to five dollars to the car-load. This will, no doubt, resurrect some half dozen companies that have been slumbering around the American, and brisk times are at hand.

SHASTA.—The Tehama *Observer* of the 23d ult. speaks of some rich placer mines in Shasta county, as follows:

Tipton & Burtt, of Red Bluff, sent $2,250 to San Francisco, in dust, the largest grain of which was valued at $325, and other pieces went from 50 cents to $150, The gold was brought to Red Bluff by George Burtt, of the firm of McPhee & Burtt, doing business at Dog Creek, Shasta county, some eighty miles north of this place, on the Sacramento river road to Yreka. It is represented as the richest gold mining section in the northern part of the State. One company, we are informed, are taking out $25 per day to the hand.

YUBA.—The Marysville *Appeal* of the 28th ult. learns that L. B. Clark sold, a few days ago, his mining claims at Smartsville for $115,000 in gold coin, retaining one-tenth unassessable. These claims join the celebrated blue gravel mines, and were purchased by an Eastern company. The ground is supposed to be very rich.

SIERRA.—A correspondent of the *Messenger* says that the interest taken in mining in the southern portion of the county is daily increasing. The Union company have not been running their mill for some time, although they have been busily at work and will commence to crush on Monday next. The Twenty-One Company are sinking shafts and taking out quartz, as the mill is not in running order at present. The Fac Simile ledge is considered one of the best in the vicinity. The Oak Flat company have, without doubt, an excellent claim. The ledge is now seven feet wide. They have two tunnels which are one hundred and thirty feet apart, in which the quartz is equally rich, and it must take a long time to crush the quartz between the tunnels. The Masonic company are working twenty men in their subterraneous gravel mine. There are several other mines in this vicinity which *are* paying well.

The sluices of the Erie company at Port Wine were cleaned up by some thieves on Friday night of last week. They got about $1,000.

The *Messenger* learns that Wasswick, on Thursday of last week, cleaned up twenty-two ounces for one day's work.

NEVADA.—The *Gazette* learns that mining matters are still quite lively at Summit City. The California company have made one clean-up of their mill, and although the yield of the rock was less than expected, it was sufficient to pay large profits.

Mr. Benj. Jones and others, engaged in working a placer mine on Gold Flat, have recently discovered a quartz ledge in their claims six feet wide, and very rich in sulphurets and free gold. They are able to trace it nearly 1,800 feet by surface indications. They are hard-working and deserving men.

A company is running a tunnel under Main street in Nevada. It is being strongly timbered, and the dirt is being run through sluices as it is being taken out. The ground under the street has long been known to be rich. In fact, the whole lower part of the city is built upon a rich placer mine.

The Grass Valley *Union* says that another handsome specimen was brought in from the Ophir mine on Tuesday evening last. The most experienced quartz miners in this section unite in the assertion that this is the handsomest and most valuable specimen ever taken from a ledge in that vicinity. On Wednesday about ten thousand dollars worth of rock was taken out. The Ophir mine is proving to be one of the richest mines in that proverbially rich district.

The Allison Ranch mine is paying from $100 to $1,000 per ton. It is said that the owners of this mine—probably the richest gold mine in the world—have divided fully one million of dollars, clear profits, within the past three years. Probably this sum is below the mark. The earnings for October last were $40,000; for November, $50,000. The owners, we believe, are six in number.

PLACER.—According to the Placer *Herald*, over one hundred ounces of gold was lately taken out of the Oro tunnel claim, near Forest Hill, as the week's work of four men. This tunnel was commenced in the year 1853, and this is the first good yield ever had from it.

We have a very interesting report of mining operations at Ophirville, which we shall give next week.

ALPINE.—Mr. W. D. Root, the Secretary of the Geo. Washington Co., has shown us some very fine looking rock, which he has received the past week, taken from the company's tunnel. It is thought to be from a spur, and that they will strike the main vein in a few days.

Work is progressing on the Active Co.'s mill. This company is putting up "desulphurising works" by which their refractory ores will be submitted to a new process which has worked finely on a small scale. High hopes are entertained of important results.

The Michigan Consolidated Mining Company, located near by, will also soon commence work under the impetus of New York capital.

TUOLUMNE.—On Tuesday of last week some prospectors discovered an immense vein of quartz of fine quality, on a hill near Sonora. Specimens yielded very well by mortar test. The locators will immediately have a quantity of the rock crushed, there being at least twenty tons in sight, in order to definitely ascertain what it will pay.

The Mount Vernon claim, Sugar Pine District, J. W. Mandeville & Co., owners, cleaned up week before last 218 ounces out of forty tons of rock.

Over 400 tons of quartz, according to the *Courier*, are now at the mouth of the tunnel of the Bacon mine, on Colder's ranch, ten miles from Sonora, and a large amount in addition is already in sight ready to be brought to surface as soon as mill facilities can be furnished.

The Sugar Pine district in this county is spoken of as noted for containing a large number of valuable quartz ledges, some of which have already yielded a vast amount of gold, while others are in a forward state of development. One of the most promising claims in the district is the Mount Moriah, near Uniontown, and about half a mile from the famous Excelsior.

MARIPOSA.—*Copper.*—The Mariposa *Free Press* says that reports from the Hamilton district concerning copper prospects still continue to be favorable. Several thousand pounds of the metal have been smelted during the last two weeks at the works of Henry & Co., ready for shipment. Quite a little town is springing up in the locality of these works at James' ranch, which may eventually rival Copperopolis. We shall refer more particularly next week to the copper mining interest of this county.

MARIN.—The Marin county *Journal* says that there is no doubt but that the copper mines now being worked at Bolinas, in this county, will prove of great value. From the Ewing claim large quantities of ore is now being taken for shipment. After working for some time in search of the hidden treasure, the owners finally struck a vein of twenty per cent. ore, two feet thick. The Union company are about to let a contract to run their tunnel two hundred feet farther, or until it strikes Ewing's ledge. The length of the tunnel of this company, thus far, is something more than five hundred feet. The owners of these mines are sanguine of great results, as the indications are favorable in the highest degree. We are glad to see that the stockholders have the prudence to keep the stock among their own immediate residents, and not allow speculators the chance to come among them, and by extravagance and mismanagement "freeze them out."

MENDOCINO.—Gold is found in Mendocino county, and quite a number of miners are said to be engaged in prospecting the gulches there, some of whom make as much as seven dollars per day.

ESMERALDA.

The editor of the Esmeralda *Union* has seen a sample of ore from the Mountain Queen mine at Montgomery, a quantity of which is being shipped via San Francisco to Swansea, England. This ore, per ton of 2,000 lbs, yields: silver, $1,011.95; gold, $13.02. The ore also assays four per cent. of copper. A second lot, from the same mine, is on the way, which is pronounced still richer. The Homestake mill, which has just been completed at Bodie, is now in operation, everything working beautifully. The machinery consists of twelve stamps, four of Hepburn's pans, with three separators, and is driven by a thirty-horse-power engine. The mill commenced crushing on the 27th ult. with three hundred tons of ore on hand, and a sufficient quantity coming out of the mine to keep up the supply. The ore pays on an average $80 per ton.

Mr Gallagher, who is the chief owner of the Crocket claim, has lately returned to Aurora, from San Francisco, and, as we understand, will take charge of the mine, which, though hitherto worked but little, still pays handsomely.

Mr. Markley, with others, has struck the Falkirk ledge at a depth of 140 feet on Last Chance Hill. It prospects very nicely. Work upon the same will be prosecuted vigorously.

HUMBOLDT.

The Humboldt *Register* says that "The Oreana" is one of the finest claims yet opened in the famous Arabia district. The ledge is about three feet in width, and the croppings assay as high as $111 to the ton. The ore is in a position extremely favorable for working. It will require roasting.

The brothers Black are still at work upon the Lavala, which continues to widen as they descend. It is now 15 feet wide, and they are following down the west wall, which continues smooth and well cased with clay, and gradually receding into the hill—promising at water level a very wide vein. No great proportion of metal in the ledge now, but it is expected the ore will, as is usually the case, concentrate when water level is reached. Their mill is on the ground, and will be erected as soon as the mineral vein will justify.

NEVADA.

The *Enterprise* says the Montana fever is quite prevalent in that city, and quite a rush thither from Washoe is predicted for next spring. Letters from that quarter speak most encouragingly of the mines there—both placer and quartz. There is a probability of work being resumed on many of the mines in the vicinity of Silver City that have lain idle for from one to three years. In most of the veins thereabouts gold is the predominant paying metal. At the time these leads were first prospected, the charge for crushing was from $30 to $50 per ton. This was more than the whole yield of the ores. Of course miners could not afford to pay such prices, so they stopped work. Now, however, crushing is being done for ten dollars, and these old and abandoned claims are likly to become valuable. Many of them yield ores that will pay from $18 to $25 per ton, and a few, rock that would undoubtedly pay, by judicious assorting, as high as $35 or $40. Among the claims named as having resumed work are the Kossuth and the Genessee companies.

A FRUIT PRESERVING HOUSE, with a capacity of 25,000 bushels, is to be erected at Buffalo, at a cost of $100,000. These houses have been thoroughly tested in Cleveland, Cincinnati, Indianapolis, New York and Greensboro, while large ones have just been finished in Pittsburg, Detroit, Chicago and St. Louis. A full description of one of these "preserving houses" and the philosophy of the process, was given in our issue of March 18th, 1865. Who will be the first to start a similar establishment in this city?

CONGRESSIONAL COMMITTEE ON MINES.—The Speaker of the National House of Representatives, in his appointment of the new Committee on Mines and Mining, has given representation to the gold mines of California and Oregon, silver mines of Nevada, lead mines of Iowa and Wisconsin, copper mines of Michigan, iron and coal mines of Pennsylvania, and Iron Mountain mines of Missouri. The Committee consists of nine members, as follows, Mr. Higby being Chairman: Higby, California; Ashley, Nevada; Cobb, Wisconsin; Strouse, Pennsylvania; Driggs, Michigan; Ashley, Ohio; Henderson, Oregon; Allison, Iowa; and Noell of Missouri.

GOOD FOR THE FARMERS.—The Calaveras *Chronicle* says: The early and abundant rains this season and the pleasant weather that followed, have enabled the farmers to make rapid progress in plowing and planting their fields. Present indications are favorable to a good crop.

QUINCY HALL is one of the oldest, largest and most respectable clothing establishments in San Francisco. Messrs. Davies & Schafer earn their success by enterprise.

THE GREAT LAKES TO BE CONNECTED WITH THE MISSISSIPPI.—At the last meeting of the Polytechnic Associatioo, Mr. Carter of Chicago, gave some particulars in relation to the work of lowering the bed of the Illinois and Michigan canal, for the purpose of draining the Chicago river into the Illinois. This canal is 100 miles in length, with a width of seventy feet at the surface, and thirty at the bottom. It connects the Chicago river, at a point near the city, with the Illinois river at Peru. It passes over a summit of about seven feet elevation, the water being raised for this level by a steam engine. The first design of the engineers was to sink the canal deep enough to avoid this summit level; but, to save expense in construction, the Commissioners finally decided on the present plan. The citizens of Chicago have, for some time, been desirous to have the canal sunk through this level, in order to drain the waters of the Chicago river through the canal into the Illinois, instead of allowing them to flow, as at present, into the lake, where they foul the water of the harbor by the sewerage of the city. It has finally been decided to do this work at the expense of the city, and on the close of navigation this year, numerous gangs of workmen are to commence the task so as to complete it with the least possible delay. Mr. Carter says that the length of the summit level is eighteen miles.

THE "DIAMOND" FEVER is raging furiously in Boise and Owyhee, according to last accounts in the *Avalanche* and *Statesman*. The editor of the former says he is the owner of *only* two diamond claims, each 300 feet square, and therefore keeps cool! Those parties who have successfully prospected for those brilliants think they have the "dead thing" on diamonds. Those crystals stand the severest tests, they say. They are small, from the size of a grain of sand to that of a small grain of wheat, but they are found all over a tract of country forty miles square—between Boise city and Owyhee. It is stated that the prospectors, from a want of mineralogical information, and in their excited eagerness, are packing home any amount of quartz, in the belief of their being diamonds. Yet, so far from the diamond excitement being a burlesque, says the *Avalanche*, it is a subject that commands the careful attention of the leading and best informed citizens.

BIG WAGONS.—We noticed some time last spring the construction and use of an immense wagon in Virginia City, Washoe, in which loads were hauled weighing as high as ten tons. This wagon was constructed for Mr. Carpenter, who after a thorough trial of the same for some eight months, and finding it a success, ordered the construction of another of twelve tons burthen. This new mammoth vehicle has been completed, and weighs 7,050 pounds.

ROAD LOCOMOTIVES.—A gigantic steam road locomotive is now at work in county Down, England, carrying freight from the Newcastle quarries. The machine is very large and heavy, calculated to carry *eighty tons* with ease. The practicability of road locomotives appears to have been fully proven, within the past three or four years; and there can scarce be a doubt apprehended that the great experiment about to be tried on the plains, westward from Missouri, will prove a success.

INCREASE OF PATENTS.—The number of patents issued for the year 1865 shows the aggregate to be 6,600, an increase of 1,600 over any previous year. It was supposed that there would be issued from the Patent Office for the week ending January 2d, 1866, 129 new patents. There was issued for the week ending with the 20th of June last, 160 patents—the largest number, we believe, ever issued from the office in any one week. The average weekly issue of patents for 1865 was 117; for 1860 it was only 98. The full official returns may slightly vary the above figures; as the closing work of the year is in part only estimated.

OIL IN COLORDO.—The Denver *News* chronicles the finding of large quantities of oil in that State. It says: We have every reason to believe from the indications and discoveries made, that portions of our Territory are as rich in petroleum as the celebrated Pithole District in Pennsylvania. Near Canyon City a well is now yielding twenty-four barrels per day of the best quality of "green oil." This well is only seventy-five feet in depth, and is the only well that has been sunk for oil in the Territory. Some others are going down, but none have as yet reached any considerable depth.

Mechanical.

IMPORTANT EXPERIMENTS.

Mr. Norman Wiard, of New York, has recently been making some interesting and important experiments in connection with steam boilers. By permission of the owners of the steamer St. John (the same whose boiler recently exploded), he inserted a number of thermometers into the port boiler (the one which subsequently exploded), for the purpose of ascertaining the differences of temperature, if any existed in the interior of the boiler. The result of his observations are given as follows:

Below the water line	276 degrees.
In the steam from	395 to 500 degrees.
12 inch. above the rupture of the 29th Oct.	500 degrees.
12 inch. below the rupture of the 29th Oct.	269 degrees.

The surface of the water in the boilers oscilated up and down six inches, alternately heating the plate by expansore to the hot steam at 500 degrees, and cooling it by contact with the water at 269 degrees. It is fearful to contemplate when we now know that a sudden change of 231 degrees is constantly occurring in these boilers; and the certain effect must be, with such expansion and contraction, to permanently weaken the plates of the boiler. These experiments have already created a great sensation among boiler-makers and engineers, and a large number of well known mechanics have examined the experiment for themselves and expressed great surprise at the new and practical discovery.

A similar class of experiments was made some time since by Chas. Wyn Williams, Esq., who has been the managing engineer of the Dublin Steam-packet line for many years. His experiments were made for an entirely different end from that had in view by Mr. Wiard, and were conducted at a low range of temperature—from 90° to 120° Fah. His conclusions, however, were, that after both the steam and water had reached 212 degrees of temperature, there was thenceforward no perceptible variation of heat between the steam and water areas in the boiler. He states that when both thermometers indicated a temperature of 218°, they would both fall simultaneously to 212, on the steam being allowed to escape.

These experiments are very important, and should be repeated, for verification, by a disinterested party. Mr. Wiard claims that he has discovered a method by which the engineer can equalize the temperature in his boilers, at will, so as to avoid the risk of explosion from its inequality; and his experiments have been made to prove that such inequality *does* exist. Will not some of our San Francisco machinists or engineers, who can have no ulterior object in view, as an inducement to produce one or the other result, repeat the experiments in this city. The cost would be trifling, while the practical results might be of immense importance, and they certainly would elicit a very great degree of interest.

An Important Branch of California Invention.—On Fremont street, near Market, Messrs. Bryant, Strahan & McEachren have recently started an establishment for the manufacture of looking-glass and picture frames. These frames are there made in all the various styles and sizes, from the cheapest wood to the richest burnished and gilt. Heretofore, we believe, with the exception of one establishment, which has manufactured principally for their own use, these frames have been imported from Europe or the Eastern States. But Mr. McEachren, one of the members of the above-named firm, having been engaged in this branch of industry from his boyhood, conceived the idea of starting an establishment of sufficient capacity to supply the largely-increasing demand of this entire market. He has invented some new machinery, connected with this branch of manufacture, whereby a great amount of labor is saved over the old process. By the use of this improvement, and the energy of the individual members of the firm, the company is now doing a good business, and employing some twenty men in the various departments of enameling, moulding, and gilding; and hope soon to be able to supply the wants of the entire Pacific coast for this class of merchandise, thus adding another link to the great chain of supplying our own wants by our own industry. We wish the company abundant success in their new enterprise.

SKILLED LABOR FROM ENGLAND.

The English papers and manufacturers are noting with no small degree of alarm the present rapid emigration of skilled labor from England to the United States, and are already beginning to look upon it in the nature of a public calamity. A late issue of the London *Times*, in commenting upon this movement, says: "It is beginning to be a frequent occurrence for forty or fifty hands to leave at every pay-day, from the principal iron and coal works of the district. This is said while speaking of the districts of South Wales, where there are famous treasures of iron, copper and coal, and where the workmen are as well skilled and as independent as any in the Kingdom.

This emigration has been so great and so long continued that so great a scarcity of skilled workmen has been produced as to enable the "strikers" to so advance the rate of wages as to admit even of the introduction of foreign iron into English manufacturing establishments. This latter fact is fully admitted in a circular recently issued by one of the largest firms of iron dealers in the city of London. In this circular it is stated that foreigners have delivered special descriptions even into the very centre of the iron districts, and have also profitably supplied from foreign sources many castings that would derange and interfere with the appliances of an English ironfounder, such as can now be made in England only at a greatly increased price.

A single steamship, the Kangaroo, recently arrived at New York from Liverpool, with over one hundred and fifty artisans and factory hands from England and Ireland, who came to seek employment in the great manufacturing centers of the New England States, and aid in developing the rapidly increasing commercial interests of the Union.

So great is the annoyance to English iron masters and manufacturers, which has grown out of this continued restlessness of workmen there, that agents have even been sent to this country to tempt the workers in iron back again to Europe; hoping by the return of such men to deter others from going abroad.

Hitherto the efforts of Americans have been chiefly directed to protective duties and a decrease of the price of home labor, to enable our people to compete in our own and the markets of the world, with foreign manufactures. The plan now is to create such a demand for foreign labor here, as to bring up the price of labor in Europe to something near our own standard; and thus prevent foreigners from supplying the markets of the world with manufactured goods through the aid of cheap labor and at the expense of the better and well paid labor of the United States. This condition of things is being brought about by a well organized emigration agency, and will have the effect to break up the oppressive system under which the English mechanic has hitherto been compelled to employ his labor at less than half its value, to build up and perpetuate the great moneyed aristocracy of England.

A ministerial order has been issued in France that only utensils tinned with pure tin should be used in the military hospitals, and M. Jeannel gives the following process for detecting small quantities of lead in tin. He treats five decigrammes of the metal filed off with an excess of nitric acid diluted with three times its weight of water, boils the mixture, filters, and then drops into the solution a crystal of iodide of potassium. If only one ten-thousandth of lead is present, a yellow precipitate is formed, which does not disappear on adding an excess of ammonia.

New Patent Lock.—The Amador *Dispatch* says a burglar-proof lock, patented by W. C. Bussy, of Jackson, is pronounced by competent judges to be the very best ever invented. The lock needs no key, and is constructed on a new principle. The inventor, we are informed, can instruct any one to fix it so that he can unlock it himself. He defies any person not so instructed to open the lock by fair or foul means.

Straightening Shafts.

It often happens in the business of the machine shop that iron shafts have to be straightened before they are turned. It is customary in most places to use a common sledge, and hammer away until the task is completed. The consequence is that many blows are struck before the object is accomplished, and the work is bruised and greatly injured.

A much better plan practised in some shops, but not so generally as it should be, is to have a large screw set in a frame, on a cast-iron bed. The shafts are put under this screw, and adjusted to suit circumstances. One turn of it will do more work, of a better quality, than much hammering. Not only this, but by putting the shaft under the screw and measuring before correcting it, the job can be done at once with one setting, so that it will be unnecessary to take it out and put it in the lathe several times. Large shafting that has to be heated before it can be straightened, may be best readily when cold, under the screw press.

It is also common to straighten shafting by "peaning;" that is to say, by hammering it on the hollow side, or the reverse of the process ordinarily employed. It looks odd to see a man hammering a shaft on the bent side to make it straight, but the philosophy of it is rational. By striking on the hollow side the scale, or skin more properly, is expanded, and, being thus the longest, compels the shaft to bend toward the round side, thus making it straight. The blows must be light, however, or else the operation will not be successful; moreover, if the shaft be turned afterwards so as to remove the scale, it will run out of truth again, and the work be spoiled.

It often happens that rods or connections require to be "off-set" so as to come in properly. Though the "off-set" is always avoided where it can be, nothing is more convenient to bend a rod with than a screw press. By it all blackening and bruising of the bright work in the blacksmith shop is done away with, and the job is so much cheaper in consequence. For straightening shafts, however, there is nothing equal to the screw press, and we recommend those who have not tried it to build or buy one without delay.—*Exchange.*

Improved Plow—A California Invention. Mr. John Mott, of Contra Costa county, near Danville, has invented a new and ingenious double-revolving plow. The plows, two in number, are placed one above the other, upon a horizontal axis, under the beam and parallel to it. Its operation is as follows: After the plow has passed across the field, and turned for the return furrow, by the touch of a spring the plow not in use, and which turns as opposite furrow, falls down from where it is, suspended, while the team, in starting, brings up the one which has just been in use, and places it in a position where it is locked, awaiting the next turn of the team. The invention is a very simple one, and promises to be of great value for plowing gardens or lands which have been fenced, as well as ground where dead furrows are objected to.

Light Railroad Locomotives.—Mons. M. Monette, a Parisian engineer, proposes to lay light rails on a narrow guage—about forty inches—on the sides of the old highways; and to work on them with small locomotives of four to five tons, or with horses in some cases. His plan seems much like what has been long in practice in most of the principal cities of this country, with horse-power, and for some years with dummy cars, and more recently with small traction engines.

A Wood-Splitting Machine.—Pierce's patent—an Eastern invention—is now in operation in Sacramento, at the corner of Second and L streets, and which, says the *Bee*, is attracting considerable attention. It consists of a knife on the end of a lever driven by steam, and works well. One man splits with it ten or twelve cords of sawed wood.

New Fusible Metal.—Dr. C. R. Von Hover has found that an alloy of cadmium 224 parts, lead 517.5, tin 295, and bismuth 1050, will melt at 149.9° Fahr. An alloy of cadmium three, and four each of tin, lead, and bismuth, fuses at 153.5°. An alloy of cadmium one, with two each of the others, or an alloy of one of each of the four metals, fuses at 155.3°. They all become pasty at lower temperatures, and all oxydize rapidly in water.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the Inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities for securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded in a letter by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every application for a patent, for seventeen years	15
On every caveat	10
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services can be rendered on moderate terms.

N. B.—We make up our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

It Is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, Jan. 6, 1866.

A State Mining Convention.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. B. WHITCOMA, Recording Secretary.
San Francisco, December 6, 1865.

A STATE MINING BILL.

We publish in our issue to-day a bill introduced into the Legislature by Assemblyman Pattison, of Nevada, the object of which is to secure a general law, that shall be applicable to all parts of the State, for regulating the location of quartz claims, and keeping up the title to the same. The Bill, as introduced, is founded mainly upon the local laws which have been in force for many years in Nevada county, and which have been generally adopted as the basis of local mining laws throughout the State. Long experience has proven that the provisions of this law work well, and it is especially desirable that they should become general, and receive the sanction of State legislation.

The author of the Bill, though he has given the subject much thought, and has had considerable experience in its practical working in the district where he resides, does not claim that it is perfect, and has expressed a wish to receive suggestions upon the subject, with a view to its modification and improvement, before any further action shall be had upon it.

We understand that it is not his intention to put the Bill upon its passage before the 20th instant. By this delay the miners of the State will be enabled to thoroughly canvass its merits, and perhaps embody their matured and practical judgment at the approaching Quartz Miners' Convention, which will be held at Sacramento on the 17th instant. In the meantime, the Mining Committee, in whose hands it now rests, will report it back to the House, and ask its reference to the Judiciary Committee, to be examined as to points of law.

The suggestions of the Nevada *Gazette* appear to be well put, and are the only ones that occur to us at present. Those suggestions are to the effect that the locators of a claim should be required to describe its situation more accurately than is provided for in this bill, and that all sales of claims, whether the consideration is under or over twenty-five dollars, should be acknowledged before a proper officer. In order to entitle a bill of sale to record, it must be acknowledged, and in this respect we think quartz claims should be put upon the same footing as real estate. Holders of claims would then always be able to trace the title from the first locator, and this will become a matter of great importance in the future. We trust the quartz men of the state will carefully examine the bill, and suggest such improvements as they deem advisable.

INTERESTING INCIDENTS.—An interesting ceremony took place on Saturday evening of last week—the last working day of the old year in the large erecting shop of the Vulcan Iron Works, on Tremont street. The mechanics employed in the various departments of this extensive establishment met on that occasion for the purpose of presenting the superintendent, Mr. Joseph Moore, a magnificent gold watch, of California manufacture, as a token of their esteem and affection. On the cover of the watch was engraved: "To Joseph Moore, from the Mechanics of the Vulcan Iron Works, San Francisco, January 1st, 1866." Mr. Birch, the estimable foreman of the works presented the gift in a neat and appropriate speech, to which Mr. Moore replied as follows:

"Boys, I receive with hearty thanks this token of your good will towards me. It is most gratifying to me to know that every workman in this establishment regards me as his friend. The workmen of the Vulcan Iron Works, I am proud to say, have always been noted for their skill, intelligence, and gentlemanly conduct. A kindly feeling and good understanding has always existed between you and your employers, and I trust these mutual good feelings will be perpetuated through many years of prosperity to both. In conclusion, I assure you I shall always try to merit a continuance of your confidence and esteem. I again thank you most cordially, and wish you many happy New Years."

After the conclusion of this ceremony, the moulders and mechanics of the foundry presented to Mr. Steiger, one of the proprietors, a very handsome gold-headed cane.

The boiler makers also presented to Mr. Aiken, himself a proprietor, a magnificent gold watch-guard. Such acts of courtesy displayed by proprietors and employees alike, are refreshing to chronicle. These social reunions tend to cement that friendship and good feeling which should ever exist between employers and employees.

COPPER ORE SHIPMENTS.—The shipments of copper ore from the Union mine, at Copperopolis, for the week ending Dec. 21st, were 532 tons. The shipments for five days ending Dec. 28th, were 394 tons.

Ten sacks of sample ore, from the Keystone mine, were shipped to this city from Stockton on Tuesday last.

The Stockton *Independent* of Dec. 28th, says that a few days previously the Taunton copper smelting company shipped from that city to San Francisco, 61 tons of regulus, or copper matte. The Campo Seco mining company shipped on the same day 86 tons of ore. On Tuesday, 24 tons of copper ore arrived at Stockton from the Campo Seco mine.

SQUARZA, THE INCOMPARABLE.—The genial spirit who presides over the mysterious precincts at No. 44 Leidesdorff street, remembered his friends, as usual, on Monday last, with an abundance of the tangible evidence of his inimitable skill as a compounder of beverages, suitable for New Year's festivities. The reception of a houutiful supply at this office is gratefully acknowledged.

THE STOCKTON AND COPPEROPOLIS RAILROAD. Richard Ivers, Esq., one of the proprietors of the Vulcan Iron Works, in this city, has, in connection with G. D. Nagle, taken the contract to build the Stockton and Copperopolis Railroad. The contract price is $1,250,000. The road will be completed within three years; the cars will probably be running on a portion of the track by next September.

IMPORTANT DECISION.—In the Nevada Supreme Court, in the case of Milliken et al vs. Sloat, Judges Brosnan and Beatty have filed their opinion reversing the order for payment in coin, and, in effect, completely upsetting the Specific Contract Act—as, in express terms they declare it in conflict with the law of Congress making the national issues legal tenders, and consequently void. Chief Justice Lewis dissents.

DIVIDEND.—The Gould & Curry Silver Mining Company have declared a dividend of $50 per foot.

ONLY A MILLION.—The bond of the Collector of Customs at San Francisco is one million dollars.

NEW QUARTZ MINING BILL.

The following bill has been introduced in the California Legislature by Assemblyman Pattison of Nevada:

AN ACT

For Acquiring and Maintaining Titles to Quartz Mining Claims.

The People of the State of California, represented in the Senate and Assembly, do enact as follows:

SECTION 1. The provisions of this act shall extend over all quartz mining claims in the State of California.

SEC. 2. Each locator of a quartz claim shall hereafter be entitled to two hundred feet on a quartz ledge or vein, and the discoverer shall be allowed one hundred feet additional. Each claim shall include all the dips, angles, and variations of the vein.

SEC. 3. On the discovery of a vein of quartz, three days shall be allowed to mark and stake off the same, in such manner, by name of the owner or owners, and the number of the claims, or otherwise, as shall properly and fully identify such claim. Parties having claims may cause a map or plan to be made, and a copy filed with the County Recorder of the county in which the claims are situated, to more particularly fix the locality; but a map or plan shall not be obligatory.

SEC. 4. Any person, a citizen of the United States, or any person having taken the necessary steps to become a citizen of the United States, shall hereafter be entitled to hold one quartz claim on any distinct and separate lead as provided in section two, and as many more as may be purchased in good faith for a valuable consideration.

SEC. 5. When the consideration does not exceed the sum of twenty-five dollars, the said claims may be transferred by a bill of sale, in the presence of one witness, without the acknowledgement of any officer; but when the consideration for such transfer shall exceed the sum of twenty-five dollars, the bill of sale or deed shall be acknowledged before some competent officer, as in real estate.

SEC. 6. A notice shall be posted on the claims, containing the number of feet claimed, name or names of the person or persons making the claim, and the initial or starting point of such claim; and within fifteen days after the discovery of the claim a copy of the aforenamed notice shall be filed for record with the County Recorder of the county in which the claim is situated. On filing the notice with the Recorder, the person presenting the notice shall make affidavit before the said Recorder that such notice has been posted on said claim prior to the filing of the notice, or the affidavit may be made before any other competent officer and sent to the Recorder with the notice. The affidavit shall be placed on record with and as a part of said notice.

SEC. 7. Within thirty days after the filing of the notice, as above provided for, an owner or an agent for the owner or owners of such claim shall file in the County Recorder's office an affidavit that work has been done on such claim to the amount as follows: If the claim be less than five hundred feet, to the amount of twenty-five dollars; if the claim contains between five hundred and one thousand feet, to the amount of fifty dollars; if the claim contains between one thousand feet and fifteen hundred feet, to the amount of seventy-five dollars; if the claim contains between fifteen hundred and two thousand feet, to the amount of one hundred dollars; if the claim contains between two thousand and twenty five hundred feet, to the amount of one hundred and twenty-five dollars; if the claim contains between twenty-five hundred and three thousand feet, to the amount of one hundred and fifty dollars; if the claim contains between three thousand and thirty-five hundred feet, to the amount of one hundred and seventy-five dollars; if the claim contains between thirty-five hundred and four thousand feet, to the amount of two hundred dollars; if the claim contains between four thousand and five thousand feet, to the amount of two hundred and fifty dollars; if the claim contains between five thousand and six thousand feet, to the amount of three hundred dollars. No claim exceeding six thousand feet shall be admitted upon the same affidavit. Upon the expiration of the aforementioned thirty days, if the affidavit as above provided for be not filed, as herein provided, then the claim becomes null and void, and open to relocation by other parties.

SEC. 8. Within one year, and each and every succeeding year, after the filing of affidavit, as provided for in section seven, an owner or agent of the owner or owners of such claim shall file with the Recorder an additional affidavit, to the effect that since the filing of the last previous affidavit, the owner or owners, through themselves or by their agent, have done work on such claims as follows: Five hundred feet or less, to the amount of twenty dollars; five hundred to one thousand feet, to the amount of forty dollars; one thousand to fifteen hundred feet, to the amount of sixty dollars; fifteen hundred to two thousand feet, to the amount of eighty dollars; two thousand to two thousand five hundred feet, to the amount of one hundred dollars; two thousand five hundred to three thousand feet, to the amount of one hundred and twenty dollars; three thousand to three thousand five hundred feet, to the amount of one hundred and forty dollars; three thousand five hundred to four thousand feet, to the amount of one hundred and sixty dollars; four thousand to five thousand feet, to the amount of two hundred dollars; five thousand to six thousand feet, to the amount of two hundred and forty dollars. Or the owner or owners, by themselves, or through their agent, may procure a license to hold such claim (after complying with the provisions of section seven) for the term of one year, at the rate and terms as follows: For a claim of five hundred feet or less, for the sum of ten dollars; five hundred to one thousand feet, for the sum of twenty dollars; one thousand to fifteen hundred feet, for the sum of twenty-eight dollars; fifteen hundred to two thousand feet, for the sum of thirty-five dollars; two thousand to two thousand five hundred feet, for the sum of forty two dollars; two thousand five hundred to three thousand feet, for the sum of forty-nine dollars; three thousand to three thousand five hundred feet, for the sum of fifty six dollars; three thousand five hundred to four thousand feet, for the sum of sixty-three dollars; four thousand to five thousand feet, for the sum of seventy-five dollars; five thousand to six thousand feet, for the sum of eighty seven dollars. In case the owner or owners of such claim fail to file the affidavit, as in this section [provided,] or, in lieu thereof, take out a license, as in this section provided, within one year after the filing of the affidavit provided for in section seven, then the same becomes null and void, and liable to relocation by other parties.

SEC. 9. The Controller of State is hereby authorized and required to prepare and furnish to the County Auditors of such counties as may require them, licenses, classed and of a value as follows: Class one, ten dollars; class two, twenty dollars; class three, twenty-eight dollars; class four, thirty-five dollars; class six, forty-nine dollars; class seven, fifty-six dollars; class eight, sixty-three dollars; class nine, seventy-five dollars; class ten, eighty-seven dollars. The Controller shall keep accounts with each Auditor in the same manner as made and provided for other licenses. The Controller may add the sum of twenty-five cents to the specified price of the above license as his fees, and the County Auditor shall collect the same in addition thereto, and account to the Controller for the same.

SEC. 10. The funds derived from the sale of the above "Quartz Mining Liscense" shall be devided as follows: One-third to the County School Fund of the county in which the license be sold, one-third to the State School Fund, and one-third to the General State and County Fund, to be divided and apportioned the same as funds derived from State and county taxes; providing, that the Auditor of the county shall be entitled to deduct from the amount five per cent. as his fees.

SEC. 11. County Recorders are hereby empowered to administer the oath, and may make out affidavits provided for in this Act.

SEC. 12. County Recorders are hereby entitled to charge and collect as their fees the same amount per folio as they are by law entitled in other matters of record, and shall be entitled to charge and collect the sum of fifty cents for each affidavit taken, and fifty cents for the filing of each affidavit.

SEC. 13. The provisions of this Act in regard to the location of claims does not include such claims as have been located previous to the passage of this Act, but such claims are required to keep up their title after the passage of this Act under the same provisions and in the same manner as claims located under and after the passage of this Act.

SEC. 14. Claims located previous to the passage of this Act, shall by their owner or owners, or agent of the owner or owners, comply with section eight of this Act within one year from the passage of this Act, or such claim shall be null and void and liable to relocation by other parties.

SEC. 15. When a time exceeding one year shall have elapsed without the filing of affidavit or procurement of license, as provided in section eight, it shall be deemed bona fide intention of abandonment, and shall be so ruled in any Court of justice in this State.

SEC. 16. The form of license as herein provided to be furnished by the Controller, shall be as follows:

QUARTZ MINING LICENSE.

Class..... From..... to..... feet.
$.....

This is to certify that ..... has this ..... day of ..... A.D. 18.., paid into the County Treasury the sum of ....., thereby declaring his bona fide intention to have and hold, for the term of one year, a certain Quartz Mining Claim, known and described as follows:
.....
....., Controller.
....., County Auditor
for and in the county of .....

In addition to the above amount I have received the the sum of twenty-five cents, the same being placed to the credit of the Controller of State.
....., Auditor.

SEC. 17. The County Auditor shall keep a register, in which he shall record each license granted, the name of the person or persons to whom granted, the name of the claim, if it be designated by a name, and the district or neighborhood in which the claim is located, and file the same montly in the office of the County Recorder.

SEC. 18. This Act shall take effect on and after its passage.

BROCKWAY'S

PERPETUAL CALENDAR

Shows without hesitation

The Date or Day of the Week

—OF—

Any Day or Date in the 19th Century,

Rendering it a prompt and accurate

ASSISTANT RECKONER,

Besides answering fully
And Conveniently
All the Purposes of the
Ordinary Counting-House Calendar
During the Nineteenth Century.

The Calendar for each month is arranged in a single column, as in the regularly published (book) Almanacs, rendering it more easy for reckoning, in most instances, than the customary Counting-House form of Calendars.

It is simply understood.
It affords the same reference from year to year.
It avoids errors.
It occupies a convenient space.
Its usefulness increases by use.
Once used it becomes indispensable,
It is worth one hundred times its cost.

Its cost is trifling, but its value is constant and perpetual. For a single reference it is often worth ten times its cost. In FINANCIAL, LEGAL and BUSINESS transactions, it saves many grave and important mistakes.

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales of mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, January 6th, 1866.

During the past year the receipts of uncoined gold and silver in this city through regular channels were as follows:—From California, $25,957,750; Nevada, including Reese River, $15,800,000; Idaho, Cariboo, Fraser River, etc., $6,948,511—in all $48,705,511. To arrive at the probable bullion product of the coast, it is proper to add at least 20 per cent. to these figures for California, to allow for receipts in private hands. From the North coast fully 40 per cent. should be added, for the reason that a much larger amount of treasure in private hands is received from Portland and Victoria than from any other mining region tributary to this city. All the bullion sent hither from Nevada arrives by public carriers. In making the additions alluded to, it will be found that the total product the past year amounted to $56,678,410, and that California produced $31,149,300, as against $28,400,000 in 1864. The yield of Nevada last year was just about the same as in 1864; and that of the North coast say $9,700,000 in 1865, as against about $10,000,000 in the preceding year.

In glancing briefly at a review of the share market for the past twelve months, it may be noted that until about the close of April last nearly all leading stocks had been well maintained at higher quotations than were ruling at the beginning of the year, but at the former date, owing to the diminished productiveness of nearly every claim on the Comstock, and the unfavorable financial condition of certain companies, a serious depression took place throughout the months of May and June. A rather better feeling was inaugurated in July, and during the ensuing months of August and September, no very violent fluctuations were witnessed, and confidence seemed to be measurably restored. Early in October symptoms of a decline were again apparent, and the market soon became under the influence of a panic, which continued without much abatement until the middle of December, every share on the list touching the lowest point reached for a long time. Since then the Comstock lode has given evidence of more permanency, and a number of mines have materially improved. The yield of bullion has increased, and there is now a fair prospect that the debts of several companies will soon be materially reduced without the aid of any further assessments. During the past week the market has exhibited less strength, and some fluctuations have occurred in the more prominent shares.

Gould & Curry opened in January last at $1,590, advanced to $2,015 in April, fell to $1,480 in May, rose to $1,750 July 1st, dropping to $1,000 in October, rallying to $1,300 in September, receding December 13th to $700, selling this week at $910@880, and closing at $900. From January to May last inclusive, regular monthly dividends of $75 per foot were paid; in June and July $50, and August $40 per foot were disbursed. For the month of December a dividend of $50 per foot has been declared.

Savage fell from $1,640 last January to $1,560 in February, rose to $2,025 in April, declined to $1,150 in June, then rallied to $1,425, receded to $1,175 July 30th, rose to $1,300 September 1st, steadily declined to $625 in November, rallied to $800, fell to $500 (assessment of $100 per foot delinquent), rose to $1,025 December 19th, and selling this week at $830@$750, closing at $760. From January to May last inclusive, regular monthly dividends of $75 per foot were declared. None have been made since then.

Yellow Jacket opened last January at $765, advancing throughout the month, and in February and March to $2,750, steadily declining the months of April, May, June, and July, to $1,090, advancing to $1,350 and $1,460 in August and September, dropping to $200, December 16th, rallying to $580 at the close of that month (assessment of $100 per foot delinquent), selling this week at $542@410, and closing at $440. In March last a first dividend of $75 per foot was declared, and in April and May dividends of $100 per month were paid.

Potosi was steadily maintained throughout January and February at $700@750, advancing in April to $1,360, buyer 30, dropping in May and June from $750 to $150, rallying at the close of the latter month to $467, and in July to $480, declining to $410 in September, and dropping to $328 November 3d, since which time this company has had no incorporate existence, being merged into the Chollar. In May, June, and August, three assessments of $50 each were levied, and in October one of $19 per foot was levied.

Chollar declined from $1,050 in January to $810 in February, and $585 in March, advancing to $1,000 in April, receding to $160 in June, rallying to $473 at the close of that month, and to $500 in July, receding to $480 in September, and to $340 November 3d. This company paid two dividends of $40 per foot each in January and February last, and during the past year three assessments were levied, two of $50 each and one of $34.

Chollar-Potosi declined from $310 to $250 in November, rose to $270 at the close of that month, fell to $110 in December, then rose to $177½, and sold this week at $176@135, closing at $145. This company levied no assessment of $100 per share in December 16th.

Crown Point rose from $650 in January, to $1,450 in March, declining from $1,360 in April to $725 June 1st, advancing throughout July and August to $1,250, receding in September, October, and November to $675, and in December to $380, then rallying to $510, and selling this week at $510@590, closing at $560 bid. An assessment of $100 was levied August 31st.

Belcher rose from $975 in January to $1,650 in March, and to $1,800 in April, declining to $620 in June, rising to $850 in July, and to $910 in September, steadily dropping throughout October, November, and December to $125, selling this week at $175@159, and closing at $150. During the past year dividends amounting in all to $336 per foot were declared, and an assessment of $100 per foot was levied December 14th.

Alpha rose from $950 to $1,425 in April, then fell to $700, advanced to $1,000 in June, to $1,470 in July, and to $2,200 in October; then steadily receding in November and December to $130, and selling since January 1st at $250@190, and closing at $203. During the past year, three assessments, amounting in all to $660 per foot, have been levied.

Ophir fell from $375 in January last to $300, rose to $590 in April, fluctuating between $550 and $480 in May and June, rising to $530 in July, dropping to $275 September 1st, rallying to $515 October 10th, declining throughout November and December to $200, seller 30, selling this week at $360@295, and closing at $305. An assessment of $100 per foot was levied August 31st.

Hale & Norcross declined from $260 to $210 in January last, rose in March to $350, and in April to $625, dropped to $400 in May, and to $650 in June, receding to $480 September 1st, rallying to $60 October 1st, falling throughout November and December to $95, then rallying to $400, selling this week at $290@265, and closing at $240. bid. Six assessments, of $50 each per foot, have been levied during the past year.

Imperial rose from $120 in January, to $192 in March, and to $285 May 10th, falling to $235 May 20th, and to $139 June 1st, then advancing in June and July to $218@245, receding to $218 July 20th, rallying to $225 August 20th, steadily receding throughout October, November, and December to $77, seller 30, rising to $130, and selling this week at $133@108, closing at $110. During the past year dividends have been declared amounting in all to $68 per share.

Overman opened January 1st at $120, fell to $90, rose to $245 February 20th, and to $350 March 10th, steadily declining throughout April, May, and June to $100, rallying to $342 July 10th, receding in August and September to $135, rising to $175 October 1st, and receding in November to $40, and on the 16th December to $7, then rising to $80, and selling this week at $67½@45, closing at $47. Two assessments, amounting to $75 per share, have been levied during the past year.

Bullion declined in January and February from $115 to $60, advanced in May to $155, dropping to $130 in June, rising to $180 July 20th, receding in September to $125, in October to $70, in November to $38, and to $5 December 16th, rallying at the close of that month to $80, and selling this week at $35@27½. Six assessments have been levied the past year, amounting in the aggregate to $126 per share.

LIST OF OFFICERS OF MINING COMPANIES AND INCORPORATIONS.

[PUBLISHED IN THE FIRST ISSUE OF EACH MONTH.]

[Below we give the date of recent meetings held in this city and the names of officers chosen or appointed. Every bona-fide company is invited to send us the result of their election, to be thus put on record, gratuitously, with any other facts of general interest.]

DANEY G. & S. M. Co.—March 6th, 1865. Trustees, Edward Martin, W. W. Palmer, W. B. Johnston, I. C. Vandervoort, H. A. Fox, C. Collischonn, E. J. Pringle; President, W. W. Pulmer; Secretary, A. Noel; Treasurer, Abel Guy.

HANSCOM C. M. Co.—December 21st. Trustees, W. W. Hanscom, Thoraton Thompson, Martin White, Jas. Biddolph, James Pendergast; President, W. W. Hanscom; Secretary, W. L. Gitchell.

JEFFREY O. M. Co., Mattole, Humboldt Co., Cal.—Trustees, Wm. M. Rider, Geo. W. Grant, Henry O. Howard, Joseph Frazier, V. Squarza; President, Charles W. Newman; Secretary, A. S. Gould; Treasurer, V. Squarza; Superintendent, Harris B. Wentworth.

SIERRA VALLEY G. & S. M. Co., Summit Township, Plumas Co., Cal.—Trustees, Earl Bartlett, C. B. Land, Lucius A. Booth, A. Noel, A. Dolet; President, C. B. Land; Secretary and Treasurer, A. Noel; Superintendent, S. R. Palmer.

RECENT INCORPORATION.

MOUNTAIN PETROLEUM Co.—November 24th. Trustees, Thomas Coles, G. C. Clark, James Walsh.

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEE and SHAREHOLDES, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harper's Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

*Those marked with an asterisk (*) are advertised in this ournal.

It is said that miners, after working a while under ground, greatly prefer it to laboriog on the surface of the earth. Such is the power of habit.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,
23v11qy 423 Washington street.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

At a late Teacher's Convention in Tennessee, the Superintendent of Schools stated that over 80,000 white people in that State could neither read nor write.

The New York *Tribune* on the 1st of November divided among its stockholders $50,000 as the profits of four months' business. As the entire original stock of the institution was only $100,000, the dividend is somewhat remarkable.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at, the office of the Mining and Scientific Press. 2v11tf

Important to Californians.—Many Inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Machinery, Mining Pumps, Amalgamators,

Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities, will be afforded ample facilities, FREE OF COST.

All parties desiring accurate and highly finished drawings and superior Machinery, at most reasonable rates, are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

LEWIS COFFEY. J. S. RISDON

LEWIS COFFEY & RISDON,

Steam Boiler & Sheet Iron Works.

THE only exclusively Boiler Making establishment on the Pacific Coast owned and conducted by Practical Boiler Makers. All orders for New Work and the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner of Bush and Market streets, opposite Oriental Hotel, San Francisco.

H. J. BOOTH. GEO. W. PRESCOTT. I. M. SCOTT.

UNION IRON WORKS!

Corner First and Mission streets,

SAN FRANCISCO.

ESTABLISHED IN 1849.

HAVING INCREASED OUR FACILITIES IN EVERY Department, we are now prepared at the shortest notice and at the most reasonable rates, to furnish all kinds and description of Machinery, including Steam Engines, Quartz Mills, Mining Pumps of all kinds, Hoisting Gear, Gas Work, Laundry Machinery, Architectural and Ornamental Castings, Sugar Mills, Saw and Flour Mills, Water Wheels of all kinds, Hydraulic, Hay, Rag, Screw and Drop Presses, Coining Machinery, Pile Drivers, Bark and Malt Mills, and all kinds of Castings.

Engines.

Marine Engines, Oscillating and Beam; Stern and Side Wheel Boats, Locomotives, Stationary Engines, Horizontal, Upright, Oscillating and Beam, from six to fifty inches diameter. Also, Scott and Eckart's Adjustable Cut-off Regulator—best in use; W. R. Eckart's Balance Valve for Stationary Engines; Woodward's Patent Steam Pump and Fire Engine.

Boilers.

Locomotive, Flue, Tubular, Upright, Cylinder and Cornish, and every variety of Boiler Work. All sizes of tubes and pipes for pumps.

Amalgamating Machinery.

Wheeler & Randall's Improved Tractory Curve Pan, Zenas Wheeler's improved flat bottom pan, Beldin's pan, Veatch's tubs, Prater's concentrators, Wakiee's pans, Beers' pan, German Barrels, Arastra Gearing, Chile Mills, Settlers of all descriptions, Retorts of all sizes and shapes, for Silver and Gold, Portable Stamp Mills, Straight Batteries, for wood or iron frames, Dry Crushing Batteries, or machines with the latest improvements, every variety of Stamps, Mortars, Cams, Pans and Tubs.

BLAKE'S PATENT QUARTZ CRUSHERS, of all sizes.

Oil Boring Tools and Machinery,

Of the latest and most approved construction, made from drawings lately made by Prof. Blake at the oil wells in Pennsylvania.

We have the facilities for working gold and silver quartz and other ores, to test their value, by the hundred weight or ton.

Russia Iron Screens, of all degrees of fineness and of all qualities of iron.

All work done in the best manner at the lowest cash prices.

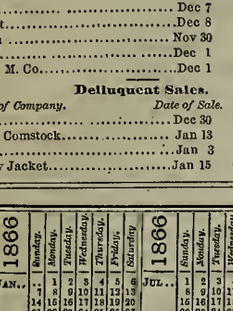
Utah	Jan 3	Virginia
Yellow Jacket	Jan 15	Gold Hill,



POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

MINING PROPERTIES.

PARTIES WISHING MINING PROPERTIES CAN BE accommodated by applying to the Pacific Mineral Co., 434 California Street, next door east of the Pacific Insurance office, up stairs. W. F. BRYANT, Agent.

N. B.—Parties forwarding Mining Interests for disposal, are reminded that it is important to state such facts only as can be fully substantiated, upon a careful examination of said properties, thereby greatly enhancing the chances of success, and avoiding the useless loss of time and trouble. 1v12

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition this day presented and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate, to pay the debts, expenses and cha ges of administration that have already occurred, and the debts, expenses and charges of administration that will or may occur during said administration.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the eleventh day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County of San Francisco, to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County

M. C. BLAKE, Probate Judge.

Dated January 4th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this fourth day of January, A. D. 1866.

[Stamp and Seal.] WM. LOEWY, Clerk.
1v12-4w. By A. J. JEGHERS, Deputy Clerk.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by C. E. McNear and Patrick Scully, the creditors of the Estate of Samuel L. Dennison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate, to pay the debts outstanding against the deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased appear before the said Probate Court on Wednesday, the 11th day of February, A. D. 1866, at 11 o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County of San Francisco, to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to said Administratrix, and be served upon her at least four weeks before said day of hearing.

M. C. BLAKE, Probate Judge.

Dated January 4th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this fourth day of January, A. D. 1866.

[Stamp and Seal.] WM. LOEWY, Clerk.
1v12 By A. J. JEGHERS, Deputy Clerk.

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in town. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of several months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantages of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that its followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, Intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons often used to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malarial fogs and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the dedication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of this institution. We have treated (mostly for cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheertully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.

OUR NEW YORK AGENCY.

James, D B	28	37½ hal	39 38

And in accordance with law, and an order of the Board of Trustees, made on the 23d day of November, 1865, se many shares of each parcel of said stock as may he necseeary, will he sold at public auction, at Maurice Dore & Co.'s Salesroom, No. 327 Montgomery street, San Francisco, on Monday, the 15th day of Jaaaary, 1866, at the heur of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

T. L. BIBBINS, Secretary.
Office, 618 Merchant street, San Francisco. dec20

Yankee Blade Mining Company, Reese River Mining District, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 6th day of December, 1865, an assessment of fifteen (15) dollars per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company.

Any stock upon which said assessment shall remain unpaid on Saturday, the 13th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 29th day of January, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. T. ATWOOD, Secretary.
Office, No. 329 Montgomery street (Stevenson House), San Francisco. dec9

Yosemite Silver Mining Company, Oro Fina District, Humboldt county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of one dollar and a quarter ($1.25) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco, or to J. T. MACLEAN, Superintendent, Star City.

Any stock upon which said assessment shall remain unpaid on Saturday, the 20th day of January, 1866, will be advertised en that day as delinquent, and unless payment shall be made before, will he sold en Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary.
Office, 402 Front street. dec23

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business throu Eastern agencies.

The James steam mill of Newburyport, which has just declared a semi-annual dividend of 25 per cent., has earned more than twice that in the last six months. The mill has a capital of $250,000, has paid its stockholders $412,000 in the past four years, and is worth more than enough more than it was then to make its earnings half a million.

Returned.—Doctor W. M. Ryer, brother of George Ryer, a well known California actor, has returned to his old home in Stockton, after an absence of two years. In those two years the Doctor has visited nearly every country in Europe, and all the civilized Mediterranean Coast of Africa, including the Pyramids.

There is a strong pressure in Congress in favor of intervention in Mexican affairs. Wade in the Senate and Schenck and Van Horn in the House have introduced resolutions denouncing the occupation of Mexico by the French, and calling for measures to effect their removal.

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive Job Printing Office.

San Francisco, April 10th, 1865.

Economy in Advertising.—The Mining and Scientific Press is the best and most economical mining advertising medium in this city. Our terms are less than one half the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on the coast.

Deserved Testimonial.

Grizzly Flat, Oct. 18, 1865.

Messrs. Hungerford & Henry—*Gentlemen:* We have run your Concentrator for several days past, in our 5 stamp Mills, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
S. F. DAVIS.

MINERS

Who wish to erect Quartz Mills, Concentrating or Smelting Works, will find it to their interest to consult the undersigned, as to the best and cheapest mode of Reducing Ores. Being acquainted with all the modern improvements of Europe and America, in Mining, Machinery and Metallurgy, I undertake the erection of any kind of Works, and warrant their successful operation.

Gold, Silver and Copper Ores bought in any quantity.

Assay of Ores made by a new Fire Process in half the usual time, and at half price.

Apply to **J. MOSHEIMER,**
23v11qy 423 Washington street, San Francisco.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers,
Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

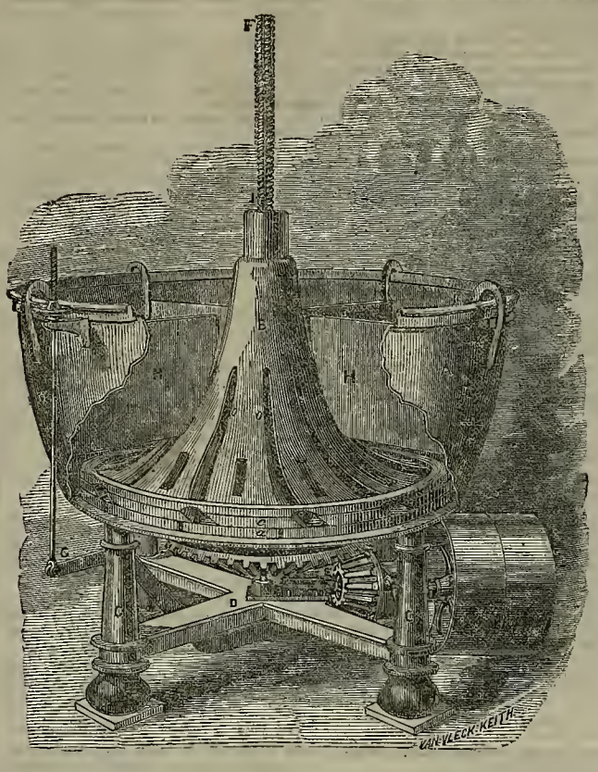
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs. W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

The Table of Contents of this book will be found on page 416 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,
WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

San Francisco, June 13, 1865.

LICK HOUSE,

Corner of Montgomery and Satter streets, SAN FRANCISCO.

S. ALSTROM AND G. S. JOHNSON, Prop'rs.

This elegant and commodious Hotel is situated on the principal promenade street of San Francisco. The Lick House is finished and furnished with a degree of beauty and excellence unsurpassed, combining all the modern applications and arrangements of a FIRST CLASS HOTEL, thus offering superior inducements to the traveling public. The proprietors assure their patrons that the Lick House shall not be excelled in any of its appointments, or in polite attendance or attention to all the comforts of its guests.

Machinery.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day.

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

FOR SALE!
A STEAM ENGINE!

18-INCH CYLINDER, FOUR-FOOT STROKE, IN PERfect Order. Can be seen running at the San Francisco Pioneer Woolen Factory, Black Point. Inquire at VULCAN IRON WORKS, 137 and 139 First street, or to

HEYNEMANN & CO.,
26v11tf 311 and 313 California street.

HENDY'S
IMPROVED BLOW-PIPE.

This Convenient Helpmeet

— TO THE —

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator

Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find in their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6dt

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

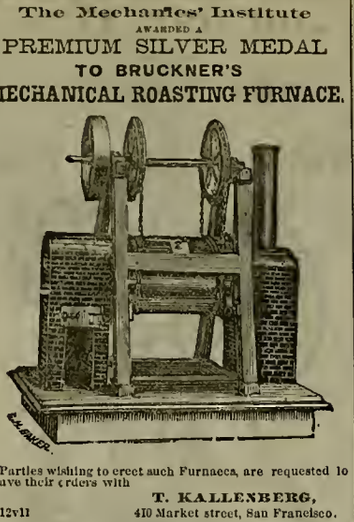
HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces are requested to leave their orders with

T. KALLENBERG,
12v11 410 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

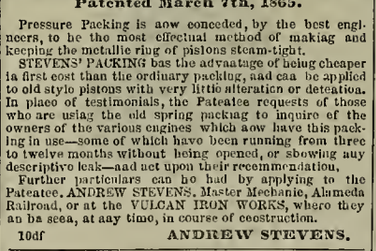
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S
PROPELLOR AMALGAMATOR
— AND —
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

STOW'S
PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill in shafts, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 1½ hole two inches deep. Regarding the tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Lincoln's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill;
3d. For strength of drill.

The above Drills will be sent to any part of the State for $130, with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. 9 Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ¾ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 50½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Men of the Pacific Coast, which cannot be derived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechaoism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now brighter than at any former period. Our facilities for furnishing a valuable journal are constantly increasing.

Following are some of the many opinions generously expressed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining noticee may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics.—[Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Nn.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will no second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the GOLDEN ERA.
"Professor Clearquill," in the Golden Era.
"Dogberry," in the Golden Era.
"Alice Mason," in the Golden Era.
"Hugh Humphrey," in the Golden Era.
"Bill Dadd," in the Golden Era.

Five copies, one year.....$15 00
Ten copies, one year.....$25 00

Now is the Time to Subscribe.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

Patera's Process on Silver Ores in Lower California.

EDITORS MINING AND SCIENTIFIC PRESS:—In the vicinity of San Antonio, Lower California, there are many silver mines producing ores, much of which is shipped to Europe, and a portion treated on the spot, by the barrel process. The general character of the ores is marked by a considerable amount of antimony. Mr. Ernst, with some others, concluded to try the Patera process, and made an experiment on nine hundred pounds of ore, containing somewhat above one hundred dollars per ton. They claim to have obtained ninety-one per cent of the silver assay, and therefore commenced to put up the necessary tubs without delay. Mr. Beseler, who came back upon the last steamer, informs me that the company is already in possession of four stamps, steam power, and two large roasting furnaces; and that they calculate to work four tons of custom ore per day, charging thirty-five dollars per ton, and agreeing to extract the silver within ten per cent. of the fire assay. According to those charges they can treat profitably all ores yielding forty dollars and upward.

The choice between the precipitation processes was doubtless very reasonable; as the use of hypo-sulphits of soda is far preferable to the salt solution, as a solvent agent; for while there are required sixty-eight parts of salt to dissolve one part of chloride of silver, only two parts of hypo sulphite of soda will be required to dissolve the like amount. Another advantage is the cold and diluted condition in which the hypo-sulphite solvent can be used; also, the continual re-production of the solvent during the process; so that a full supply of the hypo-sulphite is required only for the start.

The very richest ore may be treated by this process without difficulty; requiring, however, a proper roasting. Lead, to the amount of twelve or fifteen per cent., is not injurious. Patera's process is extensively used in Hungary, Germany, etc. An establishment employing that process is also in operation in Australia. Dr. Lanszweert, in an article lately published in the MINING AND SCIENTIFIC PRESS, very properly calls the attention of those concerned in the reduction of silver on the Pacific coast to that process; especially where the roasting is a *conditio sine qua non*; for instance, at Reese River, Humboldt, etc. By all means, this process deserves more attention than the use of sodium amalgam, which, as I showed by experiments some time ago, and described in the columns of the MINING AND SCIENTIFIC PRESS of November 18, 1865, is decomposed by the iron of the pan in a very short time—a fact easily ascertained by any one who wishes to discover for himself whether sodium amalgam is of any use in iron pans. Statements as to obtaining eighty-five per cent. by application of sodium, if the ore be of a nature that only fifty-five per cent. can be extracted without sodium, in iron pans, are simply "untrue," unless a sufficient amount of sodium is used to render the cost of the extraction of the silver much more than its value.

G. KUSTEL.

Miners in Excelsior Moving---State Miners' Convention.

Preamble and resolution submitted by a committee appointed at a "primary miners' meeting," held at Denton's Saloon, A street, Summit City, January 5, 1866:

WHEREAS, it has been definitely determined that a State Miners' Convention has been called, and is to meet at Sacramento, Cal., on the 17th inst.; and, whereas, Excelsior Mining District is entitled to a representation, and should be represented in said State Miners' Convention; and, whereas, two irregular miners' meetings, without general notice, have been held in said Excelsior Mining District to appoint delegates to said State Miners' Convention, and two sets of delegates have already been appointed.

Now, therefore, to prevent confusion and wrong; and that the miners generally of said Excelsior District may exercise a choice in the selection of said delegates, this committee recommend that the miners of the following precincts, viz.—1st. Wightman's Camp; 2d. Enterprise Camp; 3d. Summit City; 4th. Old Man Mountain; 5th. Bloody Run; and, 6th. Excelsior Camp—be requested to meet together on Sunday evening next, at two o'clock, at Denton's Saloon, in Summit City, on A street, to select and elect delegates to represent Excelsior District in said State Miners' Convention; and it is hereby further recommended and resolved by the committee, that the Chairman of this meeting cause notice of such proposed meeting to be given in the various mining precincts as soon as practicable, so that a general attendance may be secured,

TOM COX, Chairman.

Preamble and resolutions were adopted, and the Chairman of the primary meeting, J. E. Brokaw, caused notice to issue to the miners of the several Camps.

Pursuant to previous call and notice, the miners of Excelsior Mining District, on the 7th day of January, 1866, at the saloon of A. Denton, on A street, in Summit City, Nevada county, Cal., at two o'clock P. M., met in Mass Convention and elected the following named delegates to represent Excelsior Mining District in the State Miners' Convention aforesaid, viz: J. A. Brumsey, Tom Cox, —— Fitzgerald, A. K. Stewart and J. H. Tennant.

The election having been made unanimous, it was declared as the sense of the meeting that the miners of Excelsior Mining District were opposed to governmental interference with the mines, and believed that their control should be left, as heretofore, to the custome, usages and regulations of the mining district in which they are situated.

After a vote that the proceedings herein be forwarded to the Sacramento *Union* and MINING AND SCIENTIFIC PRESS, with a request that the same be published, the miners present came forward and signed their names, endorsing all action taken, and the meeting adjourned *sine die*.

J. E. BROKAW, Chairman.
G. ZACHARIAH, Secretary.

BANK PROFITS.—It is said that there are unclaimed deposits, to the amount of $40,000,000, in the Savings Banks of New York. These millions have been accumulating for upwards of a century, and are now regarded as part of the capital stock of the banks. A pretty handsome profit over and above the ordinary profits of business.

SOUTHERN TRADE.—Twenty-three ocean steamships recently cleared at New York in one day, of which only one was for Europe, nineteen were for various Southern ports, and the remaining three for various Eastern ports.

Miners' Convention---Election of Delegates from San Francisco.

Pursuant to notice, a meeting of miners was called to order at No. 240 Montgomery street, on the 12th of January, 1866, at 7½ o'clock P. M., by J. W. Pierson, Esq., and upon motion, Hon. W. B. May was chosen Chairman, and J. B. Whitcomb, Esq., and M. G. Elmore were chosen Secretaries.

Upon motion of D. S. Cutter, the following order of business was adopted:

1st. Permanent Organization; 2d. Election of Delegates to the State Convention; 3d. Resolutions and general remarks; 4th. Appointing Committees, etc., etc.

Upon motion of C. F. Wood, the Chairman was authorized to appoint a committee of three to nominate delegates to the Convention, whereupon the Chairman appointed Messrs. C. F. Wood, D. S. Cutter and J. W. Pierson.

The Committee, upon consultation, reported the following names, which were adopted and duly elected:

LIST OF DELEGATES.

A. J. Snyder,	Jos. W. Low,
J. M. Pierson,	John Hemsley,
Geo. Hearst,	D. S. Cutter,
J. W. Gushwaller,	Col. H. S. Fitch,
Wm. T. Foye,	Wm. Hollis,
Harvey S. Brown,	W. B. Ewer,
Daniel H. Mitchell,	William B. May,
C. F. Wood,	A. T. Dewey,
G. Kustel,	John S. Henning,
G. Owens,	E. T. Stein,
E. D. Waters,	Leigh Hurnet,
Wm. M. Lent,	A. Hemme,
W. P. Pool,	B. F. Sherwood,
Lloyd Tevis,	J. B. Owens,
Wm. Thompson, Jr.,	A. Hayward,
J. A. Mars.	

Col. H. S. Fitch offered the following resolution, which was adopted:

Resolved, That the committee already appointed for the selection of names for delegates to the Miners' Convention be authorized severally to report additional names, such as may be fit and proper, at any time between this date and Tuesday next.

The following resolution was offered by D. S. Cutter, which was adopted:

Resolved, That this meeting indorse the California Mining Bureau Association, now organized in San Francisco, and recommend it to the favorable consideration of the State Convention to be held at Sacramento on the 17th inst.

Upon motion of Harvey S. Brown, the delegates elect were requested to hold a meeting at room 7, No. 240 Montgomery street, on Saturday, the 13th, at 3 o'clock P. M., and at 7 P. M., on Monday, the 15th.

The Chairman then notified the delegation that upon calling on J. B. Whitcomb, Esq., they would be supplied with credentials.

There being no further business, the meeting adjourned *sine die*.

J. B. WHITCOMB, Secretary.

DEEP ARTESIAN WELL.—Wm. M. Lent is sinking, at Santa Clara, an artesian well, which is now down more than seven hundred feet, and has not struck water yet. At San Jose, only three miles distant, water is abundant three hundred feet from the surface.

IT has been calculated that iron wire conducted electricity 400,000,000 times better than fresh water, and 4,000,000 times better than sea water.

A NEVADA MINING BILL.

The following Bill was introduced into the Nevada Legislature on the 8th instant, by Hon. Mr. Glover, of Storey county:

An Act relating to Incorporated Mining Companies and for the Protection of Stockholders in the same.

The People of the State of Nevada, represented in Senate and Assembly, do enact as follows:

SECTION 1. It shall be the duty of the Superintendent, Secretary, or managing agent having charge and control of the books and business of any company, incorporated for the purpose of working a mine located within this State, to publish quarterly or cause to be published in one daily newspaper of the county in which such mine is located, and if there be none in that county, then in one published in the county nearest to the location of the mine, a statement of the affairs of the company, including its liabilities and assets, the proceeds and disbursements of the preceding quarter, for what such disbursements were made and liabilities contracted, and the present condition of the mine. Such statement to be subscribed and sworn to before some officer empowered by law to administer oaths in the said county,

SEC. 2. Any Superintendent, Secretary or managing agent whose duty it shall be to make, subscribe, swear to and publish the statement as provided in the foregoing section, who shall willfully and designedly make oath to and publish a false statement of the affairs of the company for which such statement is made, shall be deemed guilty of perjury and liable to the pains and penalties prescribed by law for the same.

SEC. 3. Any stockholder upon presentation to the Superintendent or other person having charge and control of the mine of any incorporated mining company, of a certificate of the stock of said company issued in his own name, may demand admittance to the mine and works of the company, and the Superintendent or other person having charge and control thereof shall admit such stockholder to any and all parts of the same.

PLUMBAGO, which has heretofore ruled quite high in the markets of the world, for the reason that a good quality of that mineral has heretofore been found in only a few localities on the globe, is now being found in large quantities in various parts of the earth. Large discoveries of this valuable mineral are stated to have been made in the inland districts of the Cape of Good Hope. A sample of eight bags has already been shipped to England, in order to test its value in the home market. It is found in various parts of the Eastern States; and a new and extensive deposit is said to have been recently discovered in the town of Richmond, Maine. Reports pronounce the mine one of the best in the United States. It is found in quite a number of localities in California. Large quantities, and of a very good quality, are found within eight miles of a good shipping point in Los Angeles county. It occurs in great abundance in Mariposa county where a new process has recently been adopted for its purification, which it is believed will prove a valuable discovery, and still further reduce its commercial value.

AN OIL WELL was recently opened on the Terry Farm, in West Virginia, which threw out large quantities of water and gas, mixed with a small quantity of oil, to a hight of *seventy feet!* The discharge was accompanied with a roaring like the exhaust pipe of a steamboat.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

THE AGE OF GOLD-BEARING ROCKS.

BY PROFESSOR ROWLANDSON, F. G. S. L.

NO. X.

[CONTINUED FROM PAGE 2.]

A POINT ON WHICH THE WRITER AND SIR RODERICK MURCHISON AGREE.

The first thing which led me to consider it possible or probable that gold might be hereafter found in veins inclosed by secondary or even tertiary strata, was a conviction with which I became impressed at an early period of my investigations, that metallic veins, and auriferous ores in particular, were, geologically speaking, of very recent date. Writing of the Ural Mountains, Sir Roderick Murchison corroborates this view, respecting which he states:

"Before we quit the consideration of the Ural Mountains, the reader may be reminded that, throughout the length of 500 miles, the rocks contain the precious metal at wide intervals, and in limited patches only. Having indicated the geological period of the superficial gold drift, let me also here advert to a suggestion of my own concerning the era at which the rocks are impregnated. It has been already stated, that no secondary formation contains veinstones charged with any notable quantity of gold, and that when the metal is found *in situ*, it is chiefly in metamorphosed strata of Silurian age, occasionally in Devonian, and rarely Carboniferous, or in the associated eruptive rocks. Now, it would seem that in the Ural Mountains the gold must have been segregated in separate masses in these formations at a comparatively modern geological period. In the first place, the western flank of the Ural chain offers strong evidence that the process had not been effected when the Permian deposits were completed. During that period, vast heaps of pebbles and sand, all derived from a pre-existing Ural chain (the older stratified rocks of which had even then undergone much change), were spread out over the lower country on the west. Together with fragments of all the rocks, sedimentary or igneous, which are known in the chain, specimens of magnetic iron and copper ore, large quantities of which abound in the range, are not uncommon in this Permian deposit, but nowhere does it contain visible traces of gold or platinum. Had those noble metals then existed in the Ural Mountains, in the segregated lumps and strings which now prevail, many remnants of them must have been washed down together with the other rocks and minerals, and being indestructible, must have formed part of the old Permian conglomerates. On the contrary, when the much more modern debacles that destroyed the great animals, and heaped up the piles of gravel just described, proceeded from this chain, then the debris became largely auriferous. It is manifest, therefore, that the rocks are chiefly charged with gold—*i. e.* the chief lumps and strings of it were run together—during the intervening time.

What then was probably the geological period when these rich auriferous accumulations in the Uralian rocks took place? We cannot believe that it occurred shortly after the Permian era, nor even when any of the secondary rocks were forming, since no golden debris is found even in any of the older tertiary grits and sands which occur on the Siberian flank of the chain. If, then, the mammoth drift be the oldest mass of detritus in which the gold of this region occurs abundantly, not only in the Ural, but in other parts of the world, we are led to believe that this noble metal, though for the most part originally deposited in, or diffused through, the mass of the ancient Silurian sedimentary deposits, was only brought together into rich veins and separate lumps and strings at a comparatively recent period,—*i. e.* a short time (in geological language) before the epoch during which powerful and widely-extended denudations took place, and during which the large extinct mammalia perished.*

The association of the remains of extinct quadrupeds in the auriferous drift of the Urals is paralleled in California by the existence of similar remains being found in her gold placers, and under circumstances that indicate a similar period and origin for the accumulation of the auriferous drift on the Pacific coast.

In other places Sir Roderick alludes to a suggestion made by Dr. Percy, that gold might have been deposited in veins from solution, and also to the theory of himself and others respecting the meridional direction of auriferous ranges and veins. With regard to these points, I have only space to make a very few brief remarks, viz., that occasionally there may be found in gold mines evidences where there can scarcely be a doubt admitted, that gold has been deposited sometimes as crystals, sometimes as flakes, occasionally as moss-gold from solution; but in all such cases evidences of the most indisputable character accompany these instances, that the solution was formed through the agency of decomposing minerals—usually sulphides, selenides, tellurides, etc., etc., of iron, which originally accompanied and inclosed the gold.*

With regard to the meridional direction of auriferous ranges or veins, though frequently occurring, such is not invariably the case; for instance in California, from Mariposa to Plumas and Shasta counties, covering at least ten thousand square miles of central California, in which the largest auriferous quartz veins are found in this State, as also the richest and most extensive placers, the chief gold quartz veins usually have a direction slightly north of west and south of east.

A SECOND POINT OF AGREEMENT.

Without laying any particular stress upon the subject, Sir Roderick Murchison does not fail to remark the constant association of igneous rocks with gold veins. The same association of plutonic rocks may also be traced in connection with silver, copper, and lead veins, though not probably so close a one. I only allude to the facts last described, in order to draw attention to them—to explain the reason would fill a volume. Sir Roderick remarks: "Few chains offer more contrasting outlines than are seen upon the European and Asiatic flanks of the Ural. On the former the limestones and other stratified rocks are indeed contorted, fractured, and partially changed, whilst in the center, as on the eastern slope, the masses consist everywhere either of highly altered and crystalline silurian strata, or of the *eruptive rocks* which pierce *them*. *There* only, and *particularly* where the schists are traversed by vein-stones of quartz or cut by dykes of igneous rocks, has gold been imparted in any quantity to the slaty, talcose, and chloritic strata." In Russia and the Ural Mountains, vol. 1, page 473, Sir Roderick observes: "Whether, therefore, we judge from the total absence of auriferous matter in the ancient (Permian) conglomerates on the west, and in the tertiary grits on the east, or from the absolute materials in the whole series of regenerated deposits, we conclude that the chain became chiefly auriferous during the most recent disturbances by which it was effected, and that this took place when its highest peaks were thrown up, when the present water-shed was established, and *when the syenitic granite* and other comparatively *recent igneous rocks* were erupted along its eastern edges." Again, in his third edition of "Siluria," it is stated: "No country furnishes a clearer example than Russia of the dependence of gold on certain geological and mineral relations. Her European territories are, as has been stated, chiefly occupied by slightly solidified primeval deposits. Under those conditions, and with a total absence of any crystalline rocks, whether intrusive or of sedimentary and metamorphic character, not a particle of gold has been discovered in them, over an area larger than the rest of Europe. But when the same formations have been thrown up into inclined and broken positions in the Ural chain, and have then been pierced by porphyry, greenstone, syenite, and granite, in association with huge masses of serpentine,† the very same deposits, so soft in European Russia, have been hardened, crystallized, veined, and rendered highly metalliferous; some even of the igneous mass being also occasionally metalliferous."

PLUTONIC ROCKS USUALLY ACCOMPANIED BY METALLIFEROUS VEINS.

So general is the opinion held in Cornwall of the truth embodied in the above sub-heading, that it has passed into a proverb that no mine can be found worth working that is twenty miles distant from granite, a fact that will hold good in more parts of the world than Cornwall and Devonshire.

There are other igneous rocks, however, besides granite, such as hornblend, and the varieties of trap, known as greenstone, etc., whose proximity to mineral veins also indicate a common cause of origin and association, which source of causation the writer ventures to assert, and to predict, that future inquiries and facts will establish the assertion that such origin and association will be found to arise chiefly from the presence of and disturbances occurring in connection with a molten center. In no other manner can so many of the primary and secondary phenomena, observed in ordinary mineral veins, as found associated with gold, silver, copper, lead, antimony, the blendiferous form of zinc, etc., be accounted for in the present condition of science. A molten center being admitted, an explanation of ordinary mining phenomena becomes by no means difficult.‡ Tin and cinnibar, as ordinarily found, are the only metallic compounds wrought in any quantity which, perhaps, could be adduced as opposed to this theory. It may, however, possibly be established hereafter that the Almaden cinnabar mines, in the Spanish Peninsula, are situated in a later formation than the Palæzoic; in such an event they would only assimilate with the position of other quicksilver mines in different parts of the world,§ which are all, with the possible exception alluded to, found in rocks of modern geological age. In the event of this not being found to be the case, it would not form an inseparable bar to the theory of a molten center.

With regard to tin, Dr. C. T. Jackson, on the occasion of a conversation which I held with him, while on his recent visit to San Francisco, referred me to the theory of Dobree—namely, that it was originally erupted in combination with fluorine. Perhaps this may be the case either wholly or in part. I had, however, been led to infer, from the association of Schorlaceous minerals ‖ in rocks producing tin ore, that boracic acid had a considerable influence in the dissemination of this metal. Future discoveries may, probably, reconcile all discrepancies as respects the laws which regulated the distribution of tin and also that of mercury.

---

*In many instances gold is, I know, associated in the same veinstone with other ores—such as silver, or argentiferous galena; and with various ores of copper and iron—magnetic iron being, indeed, a very frequent accompaniment; whilst the association with tin stone has before been alluded to. Such occurrences do not invalidate, but strengthen, the view derived from the phenomena in the Ural Mountains; for, as copper and iron ores are frequently found in old conglomerates or pebble beds of secondary age, and lumps of gold have never been detected in them, I see no means (explain the phenomena as we may) of evading the inference, that no great quantity of gold ore was formed (certainly not in the Ural Mountains) until the comparatively recent epoch indicated in the text. In the work "Russia and the Ural Mountains," vol. 1, p. 473, the inference is thus stated:—"Whether, therefore, we judge from the total absence of auriferous matter in the ancient (Permian) conglomerates on the west, and in the tertiary grits on the east, or from the absolute materials in the whole series of regenerated deposits, we conclude that the chain became (chiefly) auriferous during the most recent disturbances by which it was affected, and that this took place when its highest peaks were thrown up, when the present watershed was established, and when the syenitic granite and other comparatively recent igneous rocks were erupted along its eastern edges."

The reader who wishes to have fuller information on the subject of Uralian and Siberian gold, must consult Humboldt's "Asie Centrale;" "Reise nach dem Ural," etc., by Humboldt, Rose, and Ehrenberg, with the valuable mineral description of M. Gustaf Rose; various memoirs by Helmersen and Hoffman in the "Annuaire des Mines de Russie;" and Adolf Erman (Reise um die Erde), as well as an account of the general diffusion of gold and a valuable gold map of the world by that author.

*I have frequently referred to the auriferous veins found in limestone in Tuolumne and Calaveras counties, as instances in proof that the gold in such cases could not be derived by infiltration from the inclosing rocks. Sir Roderick Murchison, on report, however, alludes to gold being found disseminated in limestone rocks in Australia. In the Ural, however, he states that the inclosing slate rock does not contain gold, consequently that metal could not have been derived therefrom.

†This part of the description of the Urals might have been written for the purpose of describing the lithology of both flanks of the Sierra Nevada wherever that range is metalliferous. Respecting the serpentine rocks, I am inclined to suspect that in all cases these are the result of the metamorphism of augitic and hornblendic rocks by aqueous agencies.

‡The reader will readily comprehend that the above remark applies only to certain metals, and metallic compounds, such as those commonly found in the form of sulphides, or associated therewith. Clay, iron ore, oxide of zinc, manganese, etc., etc., frequently have had an aqueous origin, though in many cases, as instances whereof, oxide and carbonate of zinc may be instanced, as also malachite, the primary source of the metal, was most probably a sulphide.

§The quicksilver mines of New Almaden, California, are situate in rocks probably not older than the eocene.

‖Schorl, in Cornwall, is termed "The Mother of Tin."

New Method of Making Shoes.—A new style of shoes is now in this city. The invention is simple. The upper part of the boot is cut out in almost ordinary fashion by a regular shoemaker. The sole and heel are made of hard maple wood, and are joined by a shank of sole leather, which gives all needed elasticity. The uppers are fastened to the sole by a thin band of iron, which encircles the rim of the sole, and fastens sole and upper together in a manner more effectual than any sewing can do. When put together the shoe presents a handsome appearance, and is as light as a leather shoe of corresponding size. The heels are comfortably hollowed out on the upper side, and the soles have the proper curve to insure easy walking. The invention (made by a Canadian, named Lefanier, of Canada,) is the property of Mr. Wm. Robinson, (patentee,) of this city. The boots and shoes, under the patent are made by an incorporated company, having a working capital of $260,000, and a manufactory in Court street, Brooklyn, capable of turning out 100 pairs per day at present. *N. Y. Business Mirror.*

James Linen, a California poet, has been treated with "distinguished consideration" by the poets of New York. They gave him a grand dinner at the Astor House, at which the venerable Wm. Cullen Bryant presided.

[Written for the Mining and Scientific Press.]

Age and Formation of Metal-Bearing Rock.

In a lecture delivered by Dr. C. T. Jackson, at the Lincoln School-house, San Francisco, he is reported, in the Mining and Scientific Press of September 23, 1865, to have expressed an opinion that the molten interior of the earth must be of a metallic nature. This assertion, coming from one who has such a reputation as a geologist, tends to confirm the impression, in my mind at least, that the geology of the metal-bearing lode has never been written. Every intelligent miner in California knows that the exponents of the science of geology have done very little to advance the interests of mining for the precious metals, and they have looked to the geologist in vain to answer difficult questions. Perhaps, however, the learned Doctor will inform us what kinds of metal compose the molten interior of the earth. The rocks, though, indicate that all the metals known to men are, probably, within thirty-five or forty miles of the surface, and that many miles in depth of the earth's crust has solidified, since the intrusive and eruptive action ceased to bring them to the surface.

We will now pass on to the consideration of the order of the formation of the metal-bearing rocks. When the heat of the earth was so great as to render it molten at the surface, potassium, with a specific gravity of 865, and sodium with a specific gravity of 972, would, undoubtedly, have been in combination with the surface rock; and other things being equal, the other alkaline metals must also have been associated with the molten rock at and near the surface. We find gold, specific gravity 19.3; associated with quartz, specific gravity 2.65. How could bodies, differing so greatly in density, float together in a molten condition? By a wise provision of Nature in the formation of the earth for the habitation of man, the metals were kept near the surface; for metals and rocks do not expand equally with an increase of temperature. It is good philosophy to assume that when the whole earth was in a molten condition, rocks and metals would be arranged according to their specific gravity, subject, however, to such modifications as an increased temperature will produce.

Now, let us take the testimony of the rocks. The primary rocks are believed to rest upon granite, for two reasons: Firstly, they were evidently formed by the degradation, solution, and deposition of the debris of granite; and, second, all intrusive and volcanic rocks are granitic, up to the silurian or mountain limestone period.

Before water rested upon the superheated earth, the elements that are gaseous at an elevated temperature, such as chlorine, fluorine, carbon, etc., existed in the atmosphere as acids. Fancy the effect of a shower-bath of water, strongly impregnated with carbonic, hydrochloric, and hydrofluoric acids, upon red-hot rock, into the compositions of which the oxides of sodium, calcium, and other alkaline metals entered largely.

Granite is the natural matrix of the alkaline metals, and, owing to its friable condition, the elevated temperature and the powerful affinity of carbonic and hydrochloric acids for the alkalies, the formation of the primary rocks must have proceeded with comparatively great rapidity. When quartz is fused with an excess of soda it becomes soluble in water. It is probable that the beds of quartz in the gneiss system were formed by the solidification of dissolved silica; and the presence of so large an amount in solution would also tend to render the earlier stratified rocks highly crystalline in texture. (It is fashionable with geologists to prefix the adjective metamorphic to this class of rocks, assuming that the primary rocks were rendered crystalline by the action of heat.) Limestone occurs in the gneiss system, and was probably formed by the carbonic acid gas of the atmosphere, combining with oxide of calcium in solution; the product being precipitated as an insoluble compound.

Now, it is quite certain that the primary rocks never could have been subjected to a degree of heat sufficient to fuse, and thus ren-

der thom crystullino; otherwise, the carbonic acid uf the limestone would have heen driven off or volatilized.

The volume of water must have greatly increased during the period of the formation of the primary rocks, by the combination of hydrochloric acid with soda; thus, Na O+H Cl=Na Cl+H O., the latter elements uniting to form water. Chlorine, during this period, entered into the formation of chloritic slate.

Before water rested upon the earth, the surface-rock was the matrix of the alkaline metals, and the period of the formation of the primary rocks may truly be said to be the alkaline age.

We will now pass on to that period in the earth's history when the nohler metals, those having less affinity for oxygen, formed a distinctive feature of the intrusive and eruptive rocks. The crust of the earth now seems to have cooled down to the stratum from which the useful metals were derived. The period in which the intrusive and eruptive rocks brought the useful metals to the surface seems to have begun with the old red Sandstone period, and to have ended with the Liassic. Metal-hearing veins will he found intersecting such portions of tho earth's crust as were upheaved during this period.

Iron enters into the stratified rocks, in giving color to the old red sandstone, and it occurs in extensive beds of ore in the coal formation, from which the iron of commerce is mostly obtained—the carboniferous era being also the iron age. The iron which enters so largely into the formations of this era must have arrived at the surface as sulphuret of iron, which, decomposing, produced sulphate of iron. This soluble compound being subject to further decomposition, the sulphuric acid united with the alkalies, forming gypsum, heavy spar, celestine, etc., leaving the iron as an oxide, or free to enter into combination with carbon.

As the crust of the earth cooled to a greater depth, the stratum containing these metals that combine with the largest proportion of sulphur, seems to have been reached first. Thus, iron combines with 53.3 parts of sulphur in 100, and is found abundantly in the carboniferous sulphur as a carbonate. Silver combines with only 12.96 parts of sulphur in 100, and the silver-bearing stratum was evidently not reached until a period more recent than the saliferous system. Now, if silver and copper-hearing veins are found intersecting formations as recent as the saliferous period or liassic group, it is evident that they must intersect all earlier formations. The following quotations will show that metallic veins are found intersecting all formations from gneiss up to the liassic group:

"In California gold ores are found in veins intersecting gneiss, mica, and clay slates. In Cumberland, England, galena and other lead ores, blende, copper ores, calamine, affording largely zinc and three-fifths of the lead of Great Britain, occur in carboniferous or mountain limestone. There is also a rich vein of calamine, blende, and galena in Somersetshire, occurring in magnesian limestone. At Landsburg, in the Bavarian or upper Rhine (Palatinate), there occurs cinnabar, native mercury, horn quicksilver, gray copper ore, and copper pyrites, in the coal formation. Northwest of Saxony, at Eisliben, there occurs gray copper ore, somewhat argentiferous, and variegated copper ore, affording copper, in a nearly bituminous shist, more recent than the coal formation. In Connecticut and New Jersey copper ore is found in red sandstone, which is shown by Redfield, Rogers, and Hall, to be as recent as the Liassic period. Prof. Dana says the formation of gold-bearing quartz along our Eastern coasts appear to have been after the coal period."

The eruptive and volcanic rocks of this era must also have been metal-bearing, as the immense leads of iron ore in the carboniferous system, and the numerous quantities of gold-bearing quartz, gravel, and free gold in the placers of California indicate. An immense body of eruptive gold-hearing quartz still remains at Boulder Hill, Monitor District, California. The hill is about three-fourths of a mile long, and averages half a mile in width. It is completely covered with gold-bearing quartz in the shape of boulders, two of which are estimated to weigh seven hundred tons. Another example is found in Plumas county, the side of a mountain being covered with gold-hearing quartz. Blow-outs (as miners term them) of gold-bearing quartz are frequently to be met with on the western slope of the Sierra Nevada—some of them acres in extent, and some covering hut a few square rods.

From the period of the Liassic group up to the latest tertiary accumulations, the intrusive and eruptive rocks seem to be non-metallic, if we except alluminum, which is a metal of the earth proper. Trap-dykes intersect the latest tertiary formation, and of course they must intersect all underlying formations. Immense beds of hasaltic rock are found overlying tertiary accumulations of gravel, clay, etc., and in some instances gold-hearing sands. These later igneous rocks are unlike the rocks of earlier periods, in that they appear to he more nearly indestructible. The trapean and basaltic rock, unlike the metal-bearing rocks, appear to resist the action of heat and moisture, and preserve their sharp outlines through ages of exposure, and only yield to mechanical action.

If the molten interior of the earth were of a metallic nature, what marvelous mineral wealth ought the more recent intrusive and eruptive rocks to disclose. Yet, it is a notorious fact that they are destitute of metals, and are the most refractory of all rocks. The presence of metal in rocks tends to render it fusible, friable, and soluble. The earlier granitic rocks, containing the alkaline metals, were possessed of this character in the most remarkable degree, and gold-bearing quartz, free from sulphurets, is probably the least destructible of all the metal-bearing rocks.

The earlier granitic rocks were soluble to such an extent as to afford the cement, by which the debris of subsequent ages has been converted into solid rock. It is by this means that the story of the invertebrate life of the silurian, the ichthyic life of the old red sandstone, the wonderfully gigantic and abundant vegetation of the carboniferous, the monstrous reptile of the oolitic and cretaceous, and the gigantic mammals of the eocene and miocene periods, is traced on pages of stone in the great volume of Nature.

The foregoing facts seem to warrant the conclusion that the intrusive and eruptive rock ceased to be metal-bearing during the Liassic period; the crust of the earth having become solid by loss of heat to a greater depth than the lowest metal-bearing stratum.

There are two methods by which the order of the formation of all igneous rocks may be determined. First, it is a well-known fact that rocks and metals do not expand equally with an increase of temperature. When the earth was in a molten condition, from center to circumference, matter must have been arranged, stratum above stratum, according to its specific gravity, subject, however, to such modification as an increased temperature will produce. The mechanical force arising from the crust of the earth adapting itself to the over-shrinking mass it contains, produced fissures that filled with molten matter—the matter in each fissure being identical in composition with the stratum of which it is a part or chimney. As the earth continued to cool, at each successive upheaval, the molten matter to fill such fissures, would come from a greater depth. By carefully ascertaining the exact composition, specific gravity, and ratio of expansion at an increased temperature of such intrusive matter, the age of all intrusive rocks may be determined, and by the same means the order of the formation of the igneous rocks may also he determined to the entire thickness of the earth's crust. Second, ascertain in how late a formation gold-bearing quartz (for instance) can be found. If it cannot be found intersecting the rocks of a later period than the Liassic group, it would be fair to infer that the crust of the earth had solidified to a greater depth than the gold-hearing stratum. And so of all other intrusive rocks, the latest stratified formation in which any given ore or rock can be found, indicating the depth of the stratum from which it was derived.

Trap-dykes are found intersecting all stratified formations up to the tertiary period; hence, we must infer that they are of later formation than the metal-bearing veins, and that they indicate the character of the earth's crust below the metal-bearing stratum. The later intrusive and eruptive rocks being non-metallic, indicate that the molten interior of the earth is also non-metallic. F. A. H.

Shipments of Copper Ore from the Union Mine During the Year 1865.—From March 7th to April 30th, 1,786,815 pounds; May, 4,034,370; June, 7,287,820; July, 6,974,485; August, 7,165,355; September, 6,752,885; October, 6,477,420; November, 3,355,370; December, 3,250,245. Total shipments for the year 1865, 47,084,765 pounds, equal to 23,542 tons 765 pounds. The freight on the above from Copperopolis to Stockton, paid at the rate of eight dollars per ton, amounts to $188,339.

Rates of fare to New York on the Golden City, which sailed on the 10th, were as follows: First cabin, outside and ladies' rooms, $210; do. do. inside rooms, $157 25; second cabin, $84 50; steerage, $52 25.

The amount of bullion shipped from Austin by the National Bank during the month of December was $15,800. This sum, added to that shipped by Wells, Fargo & Co., makes the total shipment for that month $50,784 17.

Of Shakspeare, it is said by Richard Grant White, that he never re-touched or amended one line of all his works; he wrote for money, and having got his pay, he left his words to take care of themselves. He never wrote anybody a letter, and when he died, left but four signatures behind.

[Written for the Mining and Scientific Press.]

Letter from Grass Valley.

Editors Mining and Scientific Press:—After an absence of four days, enjoying New Year's, I again return to this place, and as I saw much during the few days spent here last week that might interest your readers, I proceed to give the following rough notes of the scenes and incidents of that visit:

The weather throughout was clear and cool, just the kind for pleasant traveling, except that the alternate freezing and thawing kept the roads in an unpleasantly muddy state. The scenery around Grass Valley has been so often described, that it would be a waste of time and ink to say anything about it here, except that it is very much like every other town of like altitude on the western slope of the Sierra Nevada, differing only in the circumstance that for several miles around the city the hills have been denuded of their heavy growth of pine and oak timber, and in its place a thick forest of young pine trees, from ten to thirty feet in height, has sprung up, giving to the hills in the immediate vicinity of the town a fresh greenness of appearance, which is noticeable nowhere else in the State.

THE MINES.

I had heard much of the number and importance of the quartz mines of Grass Valley; but I had no just conception of them until I had seen, as I did last week, the extent of that interest. The citizen of Grass Valley is awakened in the morning by the whistles of a hundred steam-engines, employed in hoisting and crushing quartz, reads his morning paper to see if there have been any new quartz discoveries, spends the day speculating and trading in quartz mines and the machinery for their development, and goes to sleep at night only to dream of the fortunes he is going to make in "quartz." But while the people here have "quartz on the brain" to the extent described, it must be recorded to their credit that they are free from the swindling spirit which has so disgraced the mining (?) operations of Washoe. The people of Grass Valley ask no outsider to invest in anything on which they are unwilling to risk their own funds, when they have any. Neither does every mine have a horde of idle and useless hangers-on, who do nothing but spend the shareholders' money, and embarrass the operations of the miners who are willing to work.

THE EUREKA MINE.

On Wednesday morning I rode out with the Watt Brothers to visit their mine, the Eureka, formerly owned by Mons. Julius Fricot, familiarly known in Grass Valley as "the Emperor," and for which they are said to have paid the nice little sum of $400,000. This mine is situated one and a half miles northeast from town. Mr. W. went with me through the mill, which is a very good one, consisting of four batteries, of five stamps each, each stamp weighing 860 pounds, with three and one-fourth inch stem. No amalgamating is done in the batteries, but the pulp is passed over blankets that retain all the heavier portion, which is passed through amalgamators, of a form common in this neighborhood, but which I have seen nowhere else in the State. They consist of a box, in the bottom of which are set two troughs, of a semi-cylindrical form, filled with quicksilver, over which the pulp is slowly washed by a stream of water, and is stirred in its passage by spikes of iron on a roller revolving at such distance above them that the ends of the spikes touch but slightly the surface of the quicksilver. [The machine here described by our correspondent is a Grass Valley invention, made some years since by Mr. M. Attwood, a well-known mining expert of this city, but for many years extensively engaged in quartz mining in Grass Valley. Mr. Attwood, we believe, never took out a patent for the invention, but has given it freely to the public. It appears to answer a most useful purpose.—Eds. Mining Press.] The tailings after being concentrated are now ground in arastras, but the owner contemplates replacing these with Hepburn & Peterson's pans. The sulphurets are concentrated by means of rockers, and are sold for working at the chemical works situated near by, or for shipment to Swansea. A lot of several tons was sold lately for exportation at $220 per ton. As the mill produces about one-half ton of these sulphurets per day, we may judge of the importance of this department of their gold-saving operations. After looking at the mill I went through the mine. The strike of the ledge is east and west, the dip nearly vertical. The breadth varies from four feet near the surface to six feet, at a depth of 317 feet, the greatest depth yet attained. The quartz is of quite uniform character, paying on an average about $40 per ton, though that they were working at the time of my visit was much richer. The walls of the vein are of greenstone, very smooth and regular, the general formation of the neighborhood being slate. Everything about the mine and mill is being made in the most thorough and practical manner, and all the modern improvements are being introduced as fast as possible.

THE UNION HILL MINE.

Leaving the Eureka about noon, I visited the Union Hill company's mine, situated two miles east of Grass Valley, of which Mr. Thos. Findley is superintendent. This company have an incline down about 150 feet, following the dip of the ledge, which is fifty feet to the south, the strike of the ledge being east and west. This company are simply prospecting, having crushed no rock except a little for the purpose of testing it, the returns from which were said to be quite favorable.

THE ALLISON RANCH MINES.

On Thursday I accepted the invitation of Dr. J. P. Blanks to go with him in his buggy to visit the celebrated Allison Ranch mine, of which Mr. M. Colbert is resident proprietor, the other owners living either at Grass Valley or at other places away from the mine. This mine, said to be the richest in Nevada county, is situated some three miles south of Grass Valley, and has been worked for eleven years. The present workings extend to a depth, measuring along the dip of the ledge, of 500 feet. The working of this mine is very expensive, on account of the excess of water—that from the new shaft requiring a ten-inch pipe for its discharge. On our return from the Allison Ranch we visited several other mines, of which I shall speak more fully hereafter.

THE OPHIR HILL COMPANY.

On Friday morning, just before leaving, I was invited by Capt. S. W. Lee to visit the Ophir Hill mine, of which he is superintendent and one-third owner. This mine is situated one mile southeast of Grass Valley, and is incorporated under the name of the Empire Co., the stock being nearly all held by Messrs. Lee, Houston, Morrison, and Pierre, owners of the celebrated blue-gravel diggings of Smartville. The strike of the ledge is north and south, with a dip to the westward of 35 degrees. The walls of the vein are of greenstone, in a slate formation. In width the vein varies from one to six feet, while the rock is the richest that I have ever seen. Capt. Lee showed me specimens valued at $15,000, which had been collected in four days' time, while $21,000 had been cleaned up from a week's run of five wooden stamps. The proprietors are erecting a new mill and hoisting works, which Capt. Lee says are the finest in the State, and which, when completed, will cost about $80,000. The hoisting engine is now at work. It was built by Goss & Lambard, of Sacramento, and is a Corliss engine of 50-horse power. Capt. Lee asserts that it saves 30 per cent. of fuel over any slide valve engine in use. The mill is being built at the Vulcan Iron Works in San Francisco, and is to have thirty stamps. It is to be furnished with all the modern improvements, including Hunter's Concentrators, one of which is now in use in the old mill, and gives very satisfactory results. Baux & Guiod's pans have been tried, both in this and in the mill of the Allieon Ranch company, and have given good satisfaction in both places.

To Mr. Poyzer, your local agent at this place, to Mr. Spencer and Mr. Dixon, stationers and newsmen, and to Dr. J. P. Blanks, I am under obligations for personal favors, while the pleasure of my visit was not a little enhanced by the polite attentions of mine host of the Exchange Hotel.

Yours, wanderingly, D.

Grass Valley, Jan, 3. 1866.

Yield of the Mines.—The yield of the Gould & Curry mine for the quarter ending November 27th, 1865, was 12,948 tons, valued at $38 14 per ton, and amounting to $493,836 72. The yield of the Chollar-Potosi mine for the same period was 12,509½ tons of ore, valued at $30 75 3-5 per ton, amounting to $384,742 10. The Savage yielded 8,036 tons, valued at $39 per ton, and amounting to $313,404. The Ophir yielded 3,000 tons, valued at $18 33⅓ per ton, and amounting to $55,000. The Mexican yielded 1,792 tons, valued at $17 92 2-5 per ton, amounting to $32,119 81. Total number of tons extracted, 38,285½, amounting to $1,279,101 63, from those five mines. That's not so bad; but just wait till they get to taking out ore from the big shafts now sinking, and then we can talk about a yield.

SALES OF THE WEEK

BY THE S. F. STOCK & EXCHANGE BOARD.

Monday, January 8.

36 shs Ophir at 230@340 per foot.
12 shs Savage at 760@745 per foot.
2 shs Savage at 755 per foot, s 5.
6 shs Savage at 740 per foot, s 30.
2 shs Savage at 750 per foot, s 3.
4 shs Chollar-Potosi at 150 per foot.
1 sh Belcher at 169 per foot.
9 shs Yellow Jacket at 440@452½ per ft, s 3.
8 shs Yellow Jacket at 445@455 per ft, s 6.
12 shs Yellow Jacket at 450@460 per foot.
12 shs Yellow Jacket at 420@410 per ft, s 30.
6 shs Yellow Jacket at 455@450 per ft, b 30.
4 shs Gould & Curry at 900 per foot.
2 shs Halo & Norcross at 249 per foot.
10 shs Empire M & M Co. at 270@276.
2 shs Bullion at 30 per share
45 shs Imperial at 107@108 per share.
5 shs Imperial at 107 per share, s 3.
15 shs Imperial at 106@105 per share, s 15.
5 shs Overman at 41 per share, s 10.
18 shs Overman at 41@40 per foot
10 shs Overman at 41 per foot, s 3.
60 shs Lady Bryan at 2½@2¼ per share.
$1,000 San Jose R R 7 ₱ cent Bonds at 72¾
$6,500 Legal Tender Notes at 69¾@69½, s 3
$ 6,000 Legal Tender Notes at 69¾ per cent.

Tuesday, January 9.

96 shs Ophir at 310@325 per share.
12 shs Ophir at 310 per foot, s 30.
4 shs Gould & Curry at 930 per foot, b 30.
8 shs Gould & Curry at 900@890 per foot.
23 shs Chollar-Potosi at 139½@140 per foot.
2 shs Chollar-Potosi at 140 per foot, b 3.
6 shs Chollar-Potosi at 140 per foot, s 3.
15 shs Chollar-Potosi at 137½ per foot, 30.
16 shs Hale & Norcross at 240@235 per ft.
22 shs Savage at 720@700 per foot.

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Now in Press—Mining and Scientific Press Book and Job Office.]

[*Continued from Page* 5.]

ON ARCHITECTURAL & MECHANICAL DRAWING.

Committee:

M. F. BUTLER, IRVING M. SCOTT,
D. FARQUHARSON, P. J. O'CONNOR.

The Committee appointed on awards for the best architectural and mechanical drawings, report—

That they have examined the different drawings exhibited, and take pleasure in awarding the first premium to the very beautifully-executed designs submitted by Messrs. England & Turnbull, architects. They make this award most cheerfully, as it has rarely been their fortune to meet with such elaborateness and artistic finish, united with such boldness of execution.

The drawing of a steam-engine, by C. W. Boynton, the Committee consider the best mechanical drawing on exhibition, it showing great care in detail and fine workman-like finish, for which they award a first premium.

To Master S. C. Higgins, for drawings of locomotives, the Committee award honorable mention. These drawings showed decided genius, and, with proper study and practice, ignoring the bad habit of indiscriminate coloring, the exhibitor will certainly excel.

ON PENMANSHIP.

Committee:

W. L. D. BARDE, E. KNOWLTON, JAMES DENMAN.

The committee after careful examination of the penmanship of different exhibitors, award to E. P. Heald the first premium for best specimens of penmanship and business writing.

The committee award to F. S. Butler, for excellent "Caligraphy," a special premium of a silver medal.

ON HYDRAULICS.

Committee:

F. G. HESSE. S. DINSMORE. IRVING M. SCOTT.

Leffel's American Double Turbine Water Wheel.—This wheel may be considered as a combination of the Jonval and the inward-flow turbine, known under the name of central-discharge wheel. The lower wheel acts on the principle of the Jonval turbine, but, instead of receiving its supply from the top, the guide-plates are placed outside the wheel, so that the water flows from the outer circumference inwards on the wheel, to be discharged, like Jonval's, at the bottom. The upper wheel receives the water in the same manner, but discharges towards the center, at the inner circumference of the wheel. The form of the lower wheel has a tendency to give the water a downward motion, so as to balance part of the weight, to relieve the step. It is the opinion of the committee that such a combination cannot increase the average efficiency of both wheels combined above that of either wheel, provided both wheels separately yield the same effect; but, if there is a difference, it follows that the average efficiency of both wheels combined must be less than that of the superior wheel. The adjustable guide plates are well adapted to prevent loss through the contraction and expansion of the stream. It is the opinion of the committee that such a combination of wheels might be turned to great advantage by furnishing simple means of closing the inlet or outlet openings of the upper wheel entirely, whereby the same wheel could be used with the same advantage and efficiency for very small and large quantities of water. The committee recommend the workmanship and general adaptation of the turbine, and give their opinion, in the absence of practical tests made under their own supervision, that its efficiency will compare favorably with some of the best wheels

Tyler's Improved Water Wheel, entered by Smith & Hanscom, Agents for California.—This wheel recommended itself at once, on account of its simplicity, consistent with the true principle of its action. It is an inward flow turbine (central discharge vortex) wheel. The guide-plates are all united in one, forming a spiral passage for the distribution of the water. In the opinion of the committee, the disadvantage of such an arrangement, in producing more friction, deserves little consideration if compared with the great benefit resulting therefrom, viz., simplicity of construction, cheapness, and durability.

Both of the above described wheels, being of Eastern invention, they cannot compete for premium.

Excelsior Pump, W. D. Hooker's Patent; and Hansbrow's Pump.—Both of these pumps are California inventions, and enter into competition as to their superiority. Both contain different points of merit, which, as a whole, are so evenly balanced that the committee were unable to discriminate between their claims, but awarded to each, for their respective excellent qualities, a silver medal.

ON MINERALS, COLORS, ETC.

Committee:

H. C. BENNETT, W. BAUSMAN.

The mineral resources of California and the adjoining States and Territories are so varied in character, spread over so large an extent of country, and so wonderful in richness of ore as to excite surprise and elicit the admiration of the nations of the world. Though a comparatively barren and desolate country, whose vast area was considered almost valueless, and promising but few attractions to the emigrant, the excitement produced by the discovery of the precious metals in California, caused a flow of travel and of population to settle in the land, unparalleled in the history of nations. The epochs of the discoveries of minerals on the Pacific slope of the United States have been so near together and continuous as, scarcely, to be entitled to separation. Commencing with the discovery by Casterillo of the quicksilver mines of New Almaden in 1845, but twenty years have sufficed to bring to the knowledge of the world a richness of varied mineral resources in California and the adjacent country, hitherto unequalled. In 1848, Marshall discovered gold deposits at Coloma, which led to further researches and discoveries, the attractions of which has developed, as it were, a new nation on the Pacific coast, and stimulated the building of a trans-continental railroad, unequalled in magnitude, the completion of which promises to be witnessed by the present generation. Following the discovery of gold, in 1848, came that of coal, which was found at Bellingham Bay, Washington Territory, in 1855, at Coose Bay, Oregon, in the year following, and in the vicinity of Mount Diablo, in this State, in 1858. Besides these, other well-defined evidences of coal deposits have since been found in various places throughout the State, and appearances now justify the assertion that, before many years have passed, California will export largely of this mineral, which plays so important a part in the prosperity of all civilized nations.

In 1856, immense deposits of rich copper ore were discovered in Calaveras county, and, from present indications, other portions of the State promise to prove equally valuable in deposits of this mineral, which promise, if realized, will make this the greatest copper producing country of the world.

In the autumn of 1859, the discovery of silver ore in Washoe, then a portion of Utah Territory, and now the State of Nevada, created an excitement which resulted in the development of mines that now produce annually more silver than is needed to meet the entire wants of our nation for coin and other purposes. With the development of this mineral wealth in Nevada has come the permanent settlement of that State and a knowledge of agricultural resources in that comparatively barren country, not before supposed to exist. Besides the above-named valuable minerals, there have been found in California indisputable evidences of the existence of many others, well known to commerce and manufactures, the requirement for which will doubtless stimulate their practical development at an early day. Among these may be mentioned iron, lead, tin, sulphur, borax, arsenic and antimony, the production of which will open new fields of labor and enrich the State. While, in one sense, the mineral resources of the Pacific coast can scarcely be termed "mechanics," still, the production of the precious and other metals opens a wide field for mechanical invention and labor, and has already done more to cause the production of manufactures and machinery among us than all the other interests of the State combined. With these immensely valuable products, but with no practical mining knowledge among our people except that acquired by actual experience and hard labor, we have as yet scarcely prospected our mineral wealth. Could the mining population of our State acquire but a smattering even of scientific knowledge of the various forms in which minerals are found, there is no doubt but that much, now passed by as valueless, would be found to pay well to work, either for home use or for export. To remedy this great want we need a mineralogical school or college, with a museum or cabinet attached, for a display of the different forms of ore and the furnishing of reliable information as to their value for profitable working. This should be a State enterprise, and its cost, if located in a proper place, would be a thousand-fold repaid by its results. With a better knowledge of minerals, the misrepresentations of interested and designing persons would, in a great part be checked and parties disposed to invest in mining enterprises have a safeguard against the many mining swindles such as have been perpetrated heretofore.

The collection of minerals in this department was much larger and more valuable than was ever before exhibited in this city, and gave some idea of the almost limitless list of the mineral products of this coast. The most prominent object in this department was the exhibition of samples of

COAL.

The exhibitors of coal were not numerous, but the specimens presented were of large size and excellent quality.

The Black Diamond Company sent a very fine specimen, weighing upwards of 3,000 pounds, from their mine at Mount Diablo.

The Eureka Company sent an enormous mass, weighing nearly 6,000 pounds, from their mine at Mount Diablo, but it arrived too late for exhibition.

The Fuca Straits Coal Company sent a specimen from their mine, located in Washington Territory. This very fine sample, which weighs 150 pounds, was accompanied by a very interesting case of fossils, obtained by their exhibitor, V. M. Faucoult, from the rocks overlying the deposit of coal, which fossils are of great value to men of science as aids in fixing the geological position of the coal measures on the Pacific coast.

There was also on exhibition a specimen of coal, of good quality, reported to have been taken from a vein near Mayfield, Santa Clara county.

All the samples of coal were of better quality than those exhibited last year, thus clearly showing that with the increased depth of mines the coal improves in quality, and giving good reason to hope that in time coal suitable for smelting purposes may be obtained. The product of the coal mines near Mount Diablo is over 4,000 tons per month.

GOLD.

The displays of gold specimens on exhibition were very numerous and interesting. Aside from their intrinsic value, the arrangement of the specimens was excellent, affording the public a good opportunity of comparing a great number of samples.

Captain J. M. Aiken exhibited a beautifully arranged collection of specimens of gold from all parts of this State, and from Oregon, Nevada and British Columbia, which displayed more difference in appearance than was by many supposed to exist. This collection was one of the most popular features of the Fair. In it was exhibited the largest mass of crystalized gold, probably, ever found in the State. Also, a very large number of specimens of quartz and placer gold, and upwards of 400 vials containing auriferous sulphurets from various mines.

Timothy Hinckley exhibited a fine mass of native gold, weighing eight pounds, and valued at $2,000, taken from his claim near Jackson, Amador county.

Besides the above, there were a great number of smaller collections of gold quartz from mines in all sections of the State, which the Committee have to omit mention of for want of space in the report.

SILVER.

The display of silver ores in the Exhibition was both valuable and varied. Many of the specimens exhibited from the mines of Lower California, Arizona and Mexico, were of large proportions and great intrinsic value.

The "Consolidated Company of Eureka District," Arizona, exhibited a mass of argentiferous galena, which weighed 650 pounds.

The Emilia mine, at Guerrero, Mexico, exhibited some very fine specimens of silver ore, as did the Neustra Señora del Carmen mine, of Mexico, which were very rich in native silver. There was a good display of silver ore from the Comstock Ledge, Reese River and other districts in Nevada, as also from Silver Mountain and other districts in Alpine county, and from Placer county, in this State.

COPPER AND COPPER ORES.

The display of copper and copper ores on exhibition afforded a pleasing proof of the rapid progress made in the development of this important branch of the State's resources.

The Union mine, at Copperopolis, furnished the largest mass of sulphurets and the most beautiful cabinet specimens of native copper and copper ores. One mass of sulphurets sent by this company weighed 1,205 pounds, and another weighed upwards of 1,000 pounds, both being free from gangue rock. This company also exhibited two fine specimens of filliform native copper.

The La Victoire mine, Mariposa county, exhibited some fine samples of sulphurets and oxides, and a peculiar talcoso ore, containing large plates and masses as well as fine grains of metallic copper.

The Sauce mine, in Lower California, exhibited a very fine assortment of ores, similar to those from the La Victoiro mine, and known to contain a large percentage of both gold and silver.

There were several other fine collections of copper ores exhibited from mines in different portions of the State, which were of much interest. Of metallic copper there were several exhibitors.

Haskell & Co. exhibited twelve bars of very fine copper, the same being a sample of five tons obtained by operating on the ore of the Lone Treo and Dozier mines, in Mariposa county—chiefly oxides and carbonates. These parties deserve great credit for their enterprise in endeavoring to smelt the ores of copper in our State. These, in many cases, containing but a low percentage of metal, which the cost of transportation precludes shipping, would, therefore, in the absence of smeltiug or concentrating at the mines, practically prove valueless.

Mr. Meader, of the Union mine, Copperopolis, exhibited specimens of copper "matte" or "regulus," obtained by concentrating the poorer ores of that mine, which, otherwise, would have been worthless, owing to the high cost of transportation and other expenses necessary to bring it to market.

TIN AND ITS ORES.

There was a very fine collection of tin ores on exhibition from several localities in Mexico.

The North American Tin Mining Company exhibited a large and beautiful collection of ores from their mine at Durango, and five large ingots of the metal obtained from the ores.

The Durango Company, who have a mine in the same locality, also exhibited a fine collection of ores.

LEAD.

There were a number of very fine specimens of the ores of this metal on exhibition, chiefly carbonates and sulphurets.

BLACK LEAD, OR GRAPHITE.

The Eureka Plumbago Mining Company exhibited a number of large specimens of the product of their mine, of which large quantities are shipped to the Atlantic States and Europe.

There were quite a number of exhibitors of what appeared to be graphite, from a number of places in the State, but which was, really, an ore of manganese, and of little value at the present time. The opportunity to compare the two ores, as afforded by the Fair, will, probably, be the means of saving future expense and annoyance to those who had previously confounded the ores with each other.

PRECIOUS STONES.

Captain Aiken exhibited a very fine collection of precious stones, found in this State, which, in number and variety, exceeded any previous display. Among them

were a diamond of good lustro, n topnz, n nnmber of rubies, n handsome clnster of garnets, a number of rongh emeralds, nnd a very large collection of opals, polished and in the rough, and imbedded in the matrix in which they nre found.

A very interesting collection of opals, jaspers, agates nnd carnelians wns on exhibition by a lndy, who had collected the same on the sea beach, a few miles distant from Sau Francisco.

RARE METALS.

Captain Aiken exhibited specimens of rare minerals, among which were sodiam, alumiuum, magnesium and platinum.

MISCELLANEOUS COLLECTIONS.

L. Leland & Co., of the Occidental Hotel, exhibited a very valuable and interesting collectiou of specimens of gold, silver and other ores, from the States and Territories on the Pacific coast. Also, fossils, curiosities, etc., which attracted a great deal of nttention.

Dewey & Co., of the "Mining and Scientific Press," also exhibited a very interesting collectiou of similar articles.

COLORS AND CEMENTS.

The Pacific Color Company made a very handsome exhibit of crude and prepared colors, made by them from the earthy and other mineral substances which nbound in this State. This enterprise is of recent origin, but promises to become a very important brunch in the manufactures of the State.

There were nlso several samples of ochres, fuller's earth, pipe clay, and other vulnable earthy substances, on exhibition from various portions of the Stato.

BORAX.

Samples were exhibited of borax, both crudo nnd refined, the samo having been collected nnd manufactured in this State. This article has been found in such abundance and purity that exports of considerable quantities are being made to the Atlantic States. Not only can the large requirements of the Pacific coast for borax be supplied from California, but the testimony of scientific men, who have examined the deposits, or rather springs of this acid, near Clear Lake, is that it can be produced in such quantity and cheapness as to lower the price of the article throughout the markets of the world.

CALIFORNIA COLORS.

By G. J. W. Gibb & Co., San Francisco, one case Californin colors. Theso colors were manufactured by the Pacific Color Works, in San Francisco, from minerals obtained on this coast. In the collection is yellow ochre, raw sienna, rose lake, besides dry colors and furniture polish; awarded n diploma.

RECAPITULATION OF MINERALS, ETC.

Capt. J. M. Aiken, for cabinet of minerals, a silver medal; California Borax Co. San Francisco, for borax, a silver medal; Black Diamond Coal Co., B. H. Ramsdell, agent, San Francisco, for best specimen of coal, a diploma; G. J. W., Gibb & Co., San Francisco, California colors, a diploma.

ON LEAD WORKS.

Committee:

JOHN C. AYRES. A. E. PHELPS. C. H. ROBBINS.

This was the first exhibition of a new and important branch of manufacture, just inaugurated on this coast. Owing to the mining and other requirements of, virtually, a newly settled country, the demand for the various articles of lead manufacture have, with us, been largely in excess of that of older States of the same population. Being far removed from the sources of supply, there have been periods in which various branches of manufacture and labor were unfavorable affected by the scarcity, and consequent high prices, of the required articles of lead manufacture. With the establishment of home manufacture, the injurious fluctuations in the valuo of these articles will, doubtless, be avoided; nnd, besides giving employment to many in the manufactory itself, the use of the raw material may stimulate mining for lead in the island of Santa Catalina and other places of deposit on our coast, and, in time, cause other branches of metal refining and manufacturing to be established among us.

Lead Pipe, Sheet Lead, and Shot, exhibited by the San Francisco and Pacific Lead Pipe, Sheet Lead, nnd Shot Works; T. H. Selby, & Co., Agents.—There being no competition in this department, does not detract from the merit due to Messrs. T. H. Selby & Co. for their enterprise in creeting the only lead works now in California. The articles exhibited were of most excellent quality, fully equal to any imported, and showed conclusively that California is now in a position to be independent of all, and equal to any of the older countries in the manufacture of these articles. For this exhibition of these articles the committee award a silver medal.

ON STOVES, IRON PIPES, CHIMNEY TOPS, MILK CANS, ETC.

Committee:

M. De La MONTANYA. T. HADLEY BRYANT.

Bullard & Battles, San Francisco, four Petroleum Stoves, with Furniture.—These stoves are designed for all kinds of cooking and general housework, with a radiator attached, that will heat apartments. They are portable, emit no smoke or smell, nnd do the work well and quickly.

J. A. Dibble, Santa Clara, exhibited two large milk cans, with planished tin.—Awarded a first premium.

W. W. Walmsley, San Francisco, had on exhibition five pieces artesian well pipe, and two pieces ventilators.

A. Brown, San Francisco, exhibited one range and fixtures, with boiler attached, one chimney top, one ventilator, and a large display of milk cans, ranging in capacity from one quart to ten gallons each, together with measures, strainers, scoops, etc.

G. Moening, San Francisco, exhibited ono stove and fixtures, with an ingenious contrivance attached to the stovo for the purposo of keeping a constant supply of warm water, which is his invention; also, a lot of tinware.

John Bohn, San Francisco, exhibited ono stove and fixtures, and six articles of tinware.

Johnston and Reay, San Francisco, had on exhibition, in this department, one range, ono stove, and one patent chimney top and ventilator. This ventilator was invented and patented hy the exhibitors. It is of the centrifugal pattern, and is warranted to cure smoky chimneys in all cases.—Awarded a silver medal, for being the best on exhibition.

Caleb M. Sickler, San Francisco, exhibited two stoves, one Putnam's wringer, nnd one lot of coal hods, &c.; also, a fine display of milk cans and tinware, for which he was awarded a second premium.

Taylor & Iredale, San Francisco, exhibited ono stove, "Fire King," of California manufacture, and ono stove, "Peacemaker," imported. The "Fire King" was invented and manufactured in San Francisco, and presents a greater variety and more perfect combination of principles than any stovo over before devised, for which it was awarded a silver medal.

H. Harrison, San Francisco, had on exhibition a model of a patent chimney top.

J E Jorgensen, San Francisco, exhibited ono air-tight stove; also, two Hendrickson's chimney tops, for which he was awarded a second premium.

Robert Gaster exhibited three "tea economizers."

John B. Owens, San Francisco, had on exhibition an assortment of coal oil lamps; also, samples of coal oil cook stoves, designed for heating and nursery purposes.

ON BRASS WORK.

Committee:

JOHN C. AYERS, A. E. PHELPS, C. H. ROBBINS.

Wm. T. Garratt was the only exhibitor in this department of mechanical skill. He exhibited a large variety of water guages, valves, cocks, globes, whistles, hydraulic pipes, couplings and fire torches of California manufacture, which, in the opiuion of the Committee, will compare favorably with, if not exceed in finish anything of the kind manufactured here or elsewhere; and they would recommend the samo to the public.

Mr. Garratt exhibited nlso n large bell, weighing 637½ lbs., being the heaviest ever cast in California. This bell, together with a small ship bell, cannot, in the estimation of the Committee, be surpassed; and they nre creditable alike to California and the muufacturer. The Committee awnrd a silver medal.

ON GARRATT'S METAL.

Wm. T. Garratt, of San Francisco, exhibited a composition of whito metal for journals nnd other friction purposes connected with machinery. This metal has been tried by many of the large foundry and machine shops in this city, nud has in all cases proved successful. In a number of cases of heavy upright shafting, where steel buttons fused from extreme heat caused by friction, Garratt's metal was substituted, nnd fully nnswered the purposes required.

Those who have used the metal for heavy anti-friction purposes report it superior to any heretofore known. This metal is an Eastern invention, discovered by the father of the exhibitor. Awarded a diploma.

Gallagher & Weed exhibited one gade brass castings; two gades brass nails; one 2-foot engine gong. For the goug nnd castings the Committee would recommend the award of a diplomn, as being a perfect result in casting and finished brass works. Awarded a diploma.

ON COMBINATION LOCK.

Committee:

C. F. JONES, SAMUEL F. BLASDELL, S. H. ROUND.

The Committee report the following: The United States Combination Lock, manufactured by the U. S. Combination Lock Co., of Springfield, Mass., exhibited by V. S. W. Parkhurst, is what its exhibitor claims it to be, *i. e.* "not liablo to be opened without the key and a knowledge of the combination by which it was locked." The Committee deem it safe nnd reliable, and well adapted for bank vaults and safes, for stores, offices, dwellings, etc.—the combination decreasing with the size of the lock; and, in the opinion of the Committee, the lock is entitled to such consideration as will testify to its merits. Awarded a certificate of merit.

ON BRASS, COPPER AND IRON WIRE, CABLES, &c.

Committee:

JOHN C. AYERS, A. E. PHELPS, C. H. ROBBINS.

The only exhibitors in this lino were A. S. Hallidio & Co., who made a very fine display of the above named articles of California manufacture, and of excellent quality. The Committee award a silver medal.

A creditablo display of California wiro work, such as fenders, scives, model-stands, screens, traps, wovo wiro, etc., etc., was made by H. T. Graves. There being no competition in this branch of the exhibitiou, the committee awarded Mr. Graves a diploma.

To N. W. Spaulding for a very creditablo display of imported saws, and for saw-teeth, patented and made hy him in San Francisco, the merits of which consist in the preservation of the saw-plate, the committeo awarded a silver medal.

Sheffield & Patterson exhibit mill, mulcy and butcher saws, manufactured in San Francisco.

Space will not admit of an extended notice of this portion of the exhibition. The superiority of these saws over all others which havo come under the notice of the committee, was so evident that they cannot refrain from giving Sheffield & Patterson credit for producing the best display of these articles in the exhibition. For beauty of finish, with every improvement and patent combined, the saws exhibited by them, in the opinion of the committee, have no superiors anywhere.

For saw-teeth in the mill and muley saws, the improvement of which consists in the prevention of the teetb from clogging, the committee would recommend tbo award of a first premium.

ON MIRRORS.

Committee:

H. G. BLOOMER, JOHN BREWSTER.

This branch of manufactures was inaugurated in California about two years since, by Messrs Cameron, Whittier & Co., who constitute tho only firm on the Pacific coast engaged in the business of plating mirrors. Although all the materials used, with the exception of quicksilver, are imported, yet the manufacturing of mirrors here has proved, as it will in the future prove, of considerable benefit to our people, as every variety of glass, or size of mirrors needed, can be plated to suit the wants of purchasers when required. It is one step towards making California dependent on her own mechanical skill, and its success, in turn, has stimulated the development of kindred enterprises.

Plated Mirrors by Cameron, Whittier & Co.—The committee have examined the large plate exhibited by this firm, the only one of California manufacture in the Fair, and, finding it equal in workmanship and appearance to any imported, award a silver medal.

Plated Mirrors imported and exhibited hy Rosenbaum & Co. The committee find that, hy a new process of fastening the silver upon the plate, it is claimed to be water-proof, and better adapted to handling and transportation than usual. The color of these plates, however, seems to have been unfavorably affected by this process. The committee recommended the award of a certificate of merit to the exhibitors, the plate showing meritorious work. Awarded a certificato of merit.

ON SHOT GUNS, RIFLES, FISHING TACKLE, Etc.

Committee:

W. H. BROWN, SAMUEL F. BLASDELL,
WARREN LOUD, JOHN K. ORR,
W. B. FARWELL.

Tho committee after carefully examining tho shot-gnns exhibited by Messrs. Villegia, R. Liddlo & Co., and A. J. Plate, decide that for superior workmanship, style of gun, and general utility, the gun exhibited by Messrs. R. Liddle & Co. is entitled to the first premium.

Tho committee examined the rifles exhibited by Messrs. Slotterbach and Liddle & Co., and decide that for superiority of workmanship, and general use as a *target and field rifle*, the rifle exhibited by Messrs. Liddlo & Co. is entitled to the first premium—Mr. Warren Loud, one of the judges, dissenting from the report, so far as connected with tho rifles. To Chas. Slotterbach, for telescopic rifle, a silver meda.l

Messrs. Wilson & Evans, and R. Liddle & Co. made fino displays of fishing tackle, and everything appertaining to that business. Certificato of merit awarded to Messrs. Wilson & Evans.

ON GRAINING, POLISHING AND SIGN PAINTING.

Committee:

G. D. WYMAN, CHARLES HOPPS, T. H. FLETCHER.

The imitations of roscwood were beautifully done.

Tho pieces exhibited as walnut imitations do not properly come under that head, being only staining and polishing on hard wood, showing tho natural grain of tho same. Tho polishing on natural wood was well done.

The glass sign painting was well done, but the Committee think the same signs were on exhibition last year.

ON GLASS SIGNS.

Committee:

H. G. BLOOMER, JOHN BREWSTER.

The Committee have examined the specimens on exhibition, and find that the two specimens by Daniel Winter are well done, and that one of them was done by an unusual process, termed "embossing on glass." Tho Committee award Daniel Winter a first premium.

Mining Summary.

CALIFORNIA.

SHASTA.—We learn from the *Courier* that Mr. Conger, at Lower Springs, is getting out and hauling to the Union mill thirty tons of rock from his lode near by. Those who have seen the rock pronounce it very rich. The *Courier* of the 6th inst., says "the Union mill has been running a little over two weeks, and cleans up to-day. The prospects are very encouraging. Nobody wants to sell yet. Figures next week. Mr. Hicks, a practical and intelligent miner, has discovered a ledge of gold-bearing quartz near Lower Springs. He commenced work on it immediately, and hauled to the mill at Spring Creek about three tons of rock that prospects by mortar process very flatteringly.

The Washington mill, has sent in to Lewin & Co., the result of a thirteen days' run—ten stamps. The run was not regular, because of the trouble in contending with ice, but netted, after melting, $2,649 10. This company have now some two hundred tons of rock at their mill, and two hundred more out and ready to be hauled. They are certainly starting off well into the new year.

The Red Bluff *Independent* of December 30th, says: "Farquharson, of the Silver City Smelting Company, Cow Creek District, Shasta county, called on us last Friday and showed us a specimen of bullion, part of the proceeds of the first smelting with a new furnace lately completed. They got forty pounds of bullion out of four tons of rock. This company was organized about one year ago, and have built a furnace three and a half feet by five feet on the inside and thirty-eight feet high; the walls are four feet thick, of an excellent quality of fire-brick, which were made on the ground. The furnace is kept to a proper heat by a water-blast of excellent construction."

PLUMAS.—The Quincy *Union* says that Kitts & Co., have taken up the vacant ground between the Cresent and the Premium Companies, and that a working capital of $100,000 has been advanced to develop and prospect the same. This, it is thought, will undoubtedly prove a remunerative investment, as the claims must be good, unless all signs fail.

A correspondent of the *Union* gives a very full account of the various mining operations in progress at Sawpit Flat, from which we shall endeavor to make liberal extracts next week.

SIERRA.—The water for mining has been shut off to a considerable extent, in Sierra county, by the freezing up of springs and ditches, and matters generally remain at a standstill. The fall of snow has been quite light so far this winter, though there has been considerable light rainy weather.

The *Messenger* learns that mining is going on quite lively at Alleghany. The Masonic Company is working and doing well, though no figuree are given. The Fac-Simile gets richer and richer as they go down on the ledge. The Uninn, from the looks of the batteries, muet be doing well. The Twenty-One is laying on its oars, waiting for spring, while the Greenback Company is under easy sail, a few men only being employed in preparations for active work as soon as winter lets go his hold.

From La Porte there is but little in the way of mining news. An immense amount of top dirt has been washed off by those owning deep diggings, which will much facilitate their work in the spring.

Gard, Tuey & Company have just repaired the damage done their flume by the late storm, and are all right again. Messrs. Goodwin & Hall, at Yankee Hill, have just completed their bed-rock tunnel and are ready for work. These men have been untiring in their labors, and it is to be hoped they will be richly rewarded for all their toil.

ALPINE.—We learn from the Silver Mountain *Bulletin* that the Buckeye, No. I, are now down seventy-two feet below their first level, and will soon be down 100 feet, at which point they propose to drift and cut the ledge, and commence hoisting pay rock.

The Wide West Company, under the superintendence of Mr. J. L. Jackson are making excellent progress with their work. It is the intention of the Superintendent to sink 100 feet before cutting into the ledge, fully fixed in the belief that at that depth, a ledge will be found in quantity sufficient to raise pay ore. The quality of the ore is undoubted, for, it is either a southern extension of Buckeye No. I, or of the I. X. L., both of which produce rich average ore.

YUBA.—The Jefferson Company, at Brown's Valley, is about to make improvements in its mill. A new and more powerful pump is to be erected, together with some modern improvements to machinery.

NEVADA.—The New York Ledge, located in Willow Valley, has been sold by William Osborn to W. C. Felton, agent of an Eastern Company, for $3,000. The New York is one of the recent discoveries, and but little has been done as yet towards its development. The purchasers will go to work immediately and open the lead. Several mines in the vicinity of Willow Valley have recently passed into the hands of capitalists, and a large number of men are employed in developing them.

A rich strike was reported in the Mohawk ledge on Monday last; some immensely rich specimens have been taken out. The ledge is reported to be two and a half feet thick, and worth, so far as can be seen, several thousand dollars per ton. Capt. Kidd reports that the pay chute in this ledge is about 300 feet in length, paying from the surface down. If the rich pocket which has been struck should prove of any considerable extent, the captain may be inclined to build another steamboat next summer.

A new mining district has been discovered on the ridge between Montezuma and Cherokee.

The *Gazette* says that a large and promising ledge has lately been discovered in the vicinity of Gregory's mill, west of Greenhorn Creek, said to be fourteen feet in thickness, and the rock very rich. The discovery has created some excitement, and a number of miners have gone out to prospect in that vicinity. A lump of dirt and decomposed rock, not larger than a man's fist, taken from the surface, yielded twenty-five cents in gold.

A letter from a correspondent in relation to the mines of Grass Valley will be found in another column.

TUOLUMNE.—The Toledo mine, says the *Courier*, which lies about 4,000 feet to the northwest of the Rawhide Ranch Mine, and upon the prospecting and opening of which there has been a large amount of capital expended, promisee to yield a rich harvest to our fellow townsman, Mr. C. Labetoure. It has been visited and thoroughly examined this week by scientific men and experienced miners, under whose directions and observation some blasts were put in, with such a satisfactory result that they pronounce it second to none in the county. The parties who made this examination were Gen. Russ, of New York, R. C. Page, of San Francisco, and our well known miners, Steve Thomas and Jos. Lewis.

AMADOR.—The correspondent of the *Dispatch* says that the mines in the neighborhood of Drytown are not very prosperous at present in consequence of the scarcity of water, and that those who have only placer diggings are forced to do without. It is rumored that the Drytown Company intend in a short time to put on a large number of hands, which may possibly brighten up this place a little. Hinkson & Co., are now employing a number of men, and their rock pays well. Brown & Co. are getting very good rock.

The proprietors of the Coney mine are using two of Prater's Concentrators, which they pronounce a valuable invention. They save at least 2,100 pounds of wet, or 1,500 pounds of dry sulphurets in the course of a twenty-four hours' run. The mill is now crushing about fifteen tons per day, and the lead is improving as they descend.

HUMBOLDT.

The reports from the Arabia district are especially encouraging. A correspondent of the Humboldt *Register* says that Webber is driving ahead with his smelting works. He has a contract with the Montezuma Co., under which his furnaces will be fully employed as soon as they are ready for operation. He will emelt and refine for $50 per ton of ore. There is much ore there which will not pay for refining, but which can be advantageously emelted and shipped abroad for refining.

The Oreana mill has succeeded in working Jersey ore up to $75 per ton by mill process.

Ore from the Dunderberg and the Ne Plus Ultra had been run through without proper chemicals, and a very small saving of silver made. With materials better results will be obtained.

The Montezuma company is running chambers east and west from the working shaft, taking out fine ore. The company has quit sinking the shaft—a bad plan in mining. Work should always be kept on to keep up the largest possible exposure of work above.

Robinson has got to work in the Savaunah—sinking shaft.

Nason and company examinod the various ledges, and took a lot of about 1,500 lbs. of ore from different claims, to experiment upon.

REESE RIVER.

In the absence of the usual "clippings" from the Reese River *Reveille*, from which we generally make up our Reese River "summary," we append the following letter from an occasional correspondent, whose views with regard to the mines about Austin may not be altogether in accordance with those of our Austin friends generally. We give the letter, however, as we receive it, in order that both sides may be heard, presuming that some of our other correspondents, or the editor of the *Reveille*, will correct whatever may be amise in the following:

RECENT DISCOVERIES.

Several prospecting parties have been out over a hundred miles to the east and southeast of Austin, and the result has been the discovery and organization of the White Pine and Morey Mining districts. The ledges in the former district are very promising, being large as well as rich, and thousands of acres of heavy white pine surround the mines. The Morey district, lying considerably further south, is said to have good mines also. In Silver Peak district, an immense ledge, all apparently of a high grade ore, was recently struck, the shrewd and fortunate Mr. Samuel Martin owning half of the location. It is said to be quite as rich as the Vanderbilt, which works over $300 a ton, and is three or four times larger.

Many valuable locations have been made in Twin River and Blue Springs districts, during the last four months. The Reese River country is now sufficiently prospected to prove one thing, which is this—that for 150 miles east, 150 miles south, 25 miles west, and 100 miles north, almost every mountain range contains silver-bearing ledges, assaying on the top from $10 to $200 per ton. It has generally been supposed that all our veins are small, like those in the Reese River district, but this is a great mistake. The mines around Austin are about the only small veins we have in the whole Reese River country—the most of our outside districts having large, well-defined lodes, in no respect inferior to the Comstock, so far as surface indications are concerned. When it is considered that we have thousands of such lodes, extending over 40,000 square miles of silver-bearing country, you can well understand how confident the best-informed amongst us are that we are yet to attain an unapproachable greatness in silver mining. Depend on it, Central Nevada, ere ten years elapse, will, in the yield of her silver mines, be the wonder of the world.

MINING MATTERS AROUND AUSTIN.

Most persons are now becoming convinced that hundreds of the so-called mines around Austin are only paper-cutter veins, most of them of no value whatever. We have, however, many good mines there, and in the Yankee Blade section of the district; but though I shall awaken the sage-brush thunder of our mighty *Reveille*, by making the fact known in your pages, I must, notwithstanding, declare that nine-tenths of the paper-cutters will never pay for opening. And our new mills, how are they to hammer out dividends for their waiting shareholders? We have over 250 stamps, either ready to work or being made ready, and I defy the editor of the *Reveille*, or "any other man," to show how it is possible at any time during the next twelve months to keep more than sixty stamps in full work from the mines of the Reese River district.

The truth is, Eastern purchasers of mines have been badly swindled—why should we attempt to conceal or deny the fact? They were led to believe, by statements appearing in the Reese River *Reveille*, that any quantity of milling ore could be taken out a few feet below the surface, and good mills alone were wanted to make the mines profitable to their owners. Well, we have got the mills, but as the mines have not been opened, and there is no surface ore to be found, the mills, as a matter of course, will have to stand idle. In the end, the mill-owners will come out all right, provided they secure good ledges and open them properly; but, in the meantime, the reputation of the Reese River mines is about to suffer by the misrepresentations of those who have had ground to sell:

GOOD-PAYING MINES.

The Savage and Whitlatch Union, in the vicinity of Austin, are yielding large amounts of bullion, and the Southern Light Mine of the Manhattan company is looking remarkably well. The Yankee Blade, Whitlatch, and Confidence Mines, in Yankee Blade Cañon, are also doing well. The St. Helena mine, in Washington District, is paying handsomely, the galena ore it yields being reduced in smelting furnaces. The Murphy, in Twin River District, has eight feet of solid ore, which works $300 per ton, and the Vanderbilt, in Silver Peak, is turning out bullion by the ton. The San Antonio mines will soon become productive, as Mr. Hunt's mill is about ready to start work.

Such are the mines we have in Central Nevada, the few named being only a tithe of the paying mines we shall be able to enumerate at the end of 1866. Moneyed men in San Francisco have lost heavily in operating in silver mines controlled by incorporated companies. If they desire to get even, why not do as Mr. Samuel Martin did—buy a mine here, and work it so as to make it pay? In three years Mr. Martin will be the richest man on the Pacific coast, and yet the Vanderbilt mine only cost him a small sum. J. H. ORMTON.

Austin, Nevada, December 30, 1865.

VIRGINIA CITY AND VICINITY.

The Gold Hill *News* speaks as follows, of the rich strike in the 445 foot level of the Yellow Jacket mine, the same to which we briefly alluded in our issue of the 30th ult: The deposit is from three to four feet in width, and is immensely rich. It seems as though the precious contents of an entire thirty-feet ledge had all concentrated, by some natural process into a four-foot belt of wealth. Twelve tons of this choice ore have been removed in sacks to the Yellow Jacket Mill, for reduction. The *News* thinks this is one of the richest, if not the very richest strike, ever made on the Comstock ledge.

In a postscript, the *News* adds: The new strike is becoming richer. Since we were down to see it last night the workmen have taken out specimens of the ore, as large as hen's eggs, and which are literally tied and woven together with bunches of wire or native silver, as bright and as pure as native silver could possible be. We never saw the like—and everybody who has had a chance to see them declares it to be the biggest strike ever made in Gold Hill.

A very rich development, according to the *Enterprise*, is reported in the Savage, by the sinking of a winze in the 445-foot or lower level. The winze is now down seventy feet, all the way in good ore. Test assays of average rock taken from the bottom of the shaft each day show a yield per ton of from $80 to over $300. The full extent of the deposit is not known, as no drifting has been done, but the full size of the winze is in ore. The winze will be sunk to the depth of 125 feet, when a working level will be opened. This will be on a level with the 200-foot station of the Gould & Curry mine, which station is 200 feet below the level of the Gould & Curry lower tunnel. Captain Curtis, Superintendent of the Savage, says the deposit of ore spoken of above, is the finest he has ever found in the mine. Being below all previous workings, it is very encouraging to all companies working upon the Comstock lead.

The Crown Point mine, at Gold Hill, is at present yielding a larger quantity of good ore than ever before in its history.

The Gold Hill *News* says that the Kentucky Company, on Crown Point Ravine, have struck a very rich ledge, at a depth of 250 feet. The same paper says that large quantities of surface rock are being taken out by the different mines at Gold Hill. This is the rock which lays between the surface and the first levels of the mines, and is found in greater abundance than was expected, and generally proves to be of a much better quality than a large portion of that taken out deeper down. The *News* is credibly informed that this surface ore will work from $30 to $60 per ton, while the expense of getting it out is much less than that of the ores at a greater depth.

The Virginia *Union* learns from a letter received from the Truckee district, that Frank Enos, Superintendent of the Collins Company, Comstock ledge, reports having found the same regular blue clay casing, such as is found in the Comstock lode in Virginia. In the Collins Company's claim, which was only discovered about five months ago, the tunnel is now in 290 feet. The Pacific Company are driving ahead on the tunnel, and expect to strike the ledge in two or three months. The Imperial Consolidated Company are sinking an incline on the ledge, which is down 166 feet. Work will be commenced on the original Northern Light and Moonlight series in a few days.

ESMERALDA.

John S. Maybugh contributes to the Virginia *Enterprise* some very interesting details of the early history and present condition of the mines in the Bodie District, which we will endeavor to find room for in a future issue.

Advices just received from the Kearsarge Mining District, in Owen's Valley, confirm the reports of the richness of Kearsarge lead. The Company are reported to have struck it rich. They have a 20-stamp mill now on the way to the mine. A small 5-stamp mill is already on the ground. Passmore's mill in the same district is already in operation.

Mr. Dorr, representing New York capital, has also located a mill site on Little Pine, and will erect a mill.

The Dayton Company are putting up a saw-mill, and will be cutting timber next week.

Mechanical.

MORE ABOUT METALLIC ALLOYS—TITANIC IRON.

The valuable and, hitherto, exceedingly rare mineral titanium, which was first discovered as a useful metal by Gregor, in 1791, in Cornwall, England, has recently been found associated with iron, in inexhaustible quantities, in the Island of New Zealand. This metal is of a deep blue color, and occurs in limited quantity in iron ores in many parts of the world. It is always, we believe, found as an oxyd, and in one of the three following conditions: As a protoxide of titanium, TiO; a sesquioxide, $Ti^2 O^3$; or as titanic acid, TiO^2.

The metal titanium has long been known to be of great service as an alloy for iron—rendering that metal exceedingly hard and steel-like. Such an alloy is peculiarly noticeable and serviceable, from the fact that while it is *harder* than ordinary steel, it is at the same time *more flexible*, and is almost as free from oxydation as the ferro-manganese, noticed in our issue of November 25th, 1865. This alloy is very similar in its properties to tungsten or manganese alloys of iron, each of which have recently been fully described in the columns of the Press. But unlike either tungsten or manganese, this alloy may be obtained direct from a natural ore at a single smelting; the result being a pig-iron of a very white and compact fine-grained character, resembling to some extent the variety produced from spathic iron ore, and which may be readily run directly into ingots of a pure alloy of titanium and iron; *five per cent. of which*, added to the material of which the Bessemer steel is made, will make steel of the best quality.

It is estimated, from the experiments made in England, in a small furnace of one ton capacity, that, with a furnace of suitable dimensions, this alloy can be delivered in the pig, in London, for $20 per ton. It is, moreover, claimed that the alloy in this condition is fully equal to the Taranaki steel which is now selling in London at $420 per ton! This claim is made in the London *Mining Journal*. If the advantages of the process and quality of manufacture is not over-stated, the company which is about to embark in the business must have exceedingly good prospects before them, and will even put Bessemer quite in the shade.

According to the reports of the proceedings of a meeting of an association at Birmingham, of persons connected with the iron interests of Great Britain, as reported in the Colliery *Guardian* and London *Mining Journal*, some of this alloy, or titaniferous iron, has been worked into various manufactured articles, specimens of which were submitted to and tested before the meeting, with a result which appears to have fully sustained all that is claimed for it. The Messrs. Mosely, the well-known cutlers of Convent Garden, have manufactured from it various articles, which, according to the report, "they tested in every possible way, and tried its temper to the utmost, and they report that the metal exceeds anything they have worked in steel before. It was formed into razors, saws, table cutlery, surgical instruments, etc., and the closeness of the grain, fineness of polish, and keenness of edge, place it in the very foremost rank." We are unable to make out, from the accounts before us, whether this iron was submitted to a puddling process or not, but we presume it must have been. The account of the manufacture of the iron from which the above articles were made, simply says: "The first practical application of the New Zealand sand was made by Mr. Robert Mushet, who converted some, by simply smelting it in crucibles, into steel, for Messrs. Mosely."

Again, we are further told that "above five tons of pig-iron was supplied to Messrs. D. Hopkins & Sons, of Westbromerich, and by them it has been converted into bars, rods, sheets, hoops, etc., which prove to be of a very superior quality. *The iron was first puddled alone in the furnace.* Some of the 1¼-inch bar-iron has been made into a chain-cable at the works of Messrs. Purkes & Tipton, and has stood a strain of fifty tons, or nearly *three times* the Government test, and then it only yielded at the weld.

The importance of the experiments above alluded to cannot be over-estimated. The result indicated is one of the great *desiderata* of the age—the cheap production of a first-class tenacious iron. This iron, from all accounts, appears to be much more tenacious, and more capable of resisting the penetrating effects of blows, as from cannon shot, than the best of steel as heretofore made from ordinary iron. If there is no mistake in the above-named reports, and if this titaniferous iron can be manufactured anything like as cheap as indicated, the discovery must surely lead to the most important results in the manufactures of the world, in the various shapes and forms of metallic structure, to which iron and steel cannot be applied in the present state of knowledge, and at the present cost of the better qualities of those metals. By the use of such an alloy as above described, iron-clad ships may be made almost or quite as light as wooden war-ships, and, at the same time, far more impervious to cannon shot than even the most unwieldy iron-clads of the present day. As we have already said, more than once, this question of metallic alloys may now be considered as one of the most important mechanical problems of the age, and one which should engage the earnest attention of every man engaged in working metals.

From what has been said, it may be interesting to the reader to learn something of the probable extent of the rare deposit of this valuable mineral. In no other part of the world has it been discovered in workable quantities. The largest deposit heretofore discovered, we believe, occurs at St. Paul's Bay, in Canada, where there is a bed 200 feet long by 90 wide. It is also found in small quantities in some places in New York, and at South Royalston, Mass. It is found in considerable quantity at one or two places in Italy. It occurs in very small quantities among the gold-sands of this State, and is very plentiful in the sand found upon the bank of the Sacramento, at Martinez. In the same locality where the "precious stones" are now being gathered. This New Zealand titanic iron-sand is found distributed, more or less, over the whole island, and in almost inexhaustible quantities. The largest tract, however, is said to extend fully sixteen miles along the sea-coast of that island, at the foot of Mount Egmont, and in the neighborhood of New Plymouth. The account of this deposit says: "It is scarcely possible to conceive a property offering greater facilities for working—a shovel and a barrow being the only investment in machinery necessary."

This sand has been carefully analyzed and pronounced to be the purest ore of the kind at present known—containing 88½ per cent. of per-oxide of iron, and 11½ of oxide of titanium with silica. The great difficulty hitherto experienced in smelting the ore has arisen from its fine state of subdivision; but by the process recently invented in England its reduction has been rendered almost as easy as that of ordinary iron ore. One hundred tons of the ore have recently been taken to England to experiment upon from which the results heretofore given have been obtained. It is proposed, we believe, to work the ores in New Zealand, where there is an abundance of fuel in close proximity to the ore. The tracts of land where it occurs belong mostly to the British Government.

Patent Obtained.—Mr. Samuel Brown, of this city, has obtained, through the Mining and Scientific Press Agency, a patent for his "Disengaging Eye." This invention was fully described in our issue of December 2d, 1865; a few days previous to which date, a practical illustration of the invention was given on board the Revenue Cutter Shubrick, in this harbor. The invention is designed to secure the instantaneous and safe disengagement of a boat from a ship or steamer, when under full headway at sea; the object being to effect a greater security to the lives of passengers in leaving a vessel in distress. The invention is pronounced a most valuable one, and measures are being taken to secure its general introduction on board of all passenger carrying vessels.

FORGING AND WELDING CAST STEEL.

George Ede, an English mechanic resident in New York, has given a large amount of practical information on the management of steel, in a little pamphlet recently published by D. Appleton & Co. Steel is one of the most valuable and useful metals, and its management is quite too little understood by most mechanics. There are tons of the very best steel condemned as bad—when, the fact is, it has been made bad by forging; that work having been entrusted to workmen who did not have a proper knowledge of its management. It is not an uncommon thing for a man to say to his fellow workmen, "make it well hot—it will work the easier"—and in so doing destroy the very best of steel, pronouncing it a bad article, unaware of the fact that their own ignorance has destroyed it. Mr. Ede, in his pamphlet, gives the following directions for

FORGING CAST STEEL.

"In forging of cast steel the fire must be regulated by the size of the work; and in heating the steel, when the flames begin to break out, beat the coals round the outside of the fire close together with the slice to prevent the heat from escaping. To save fuel, damp the coal, and throw water on the fire if it extend beyond its proper limits. To ascertain the heat of the steel, draw it out of the fire, and that often, for it requires to be well watched to heat the steel properly; and if not hot enough, thrust it quickly in again. Soft coke is even better than coal for the fire. The heat the steel receives is judged of by the eye; and care should be taken not to use a higher degree of heat than is absolutely necessary to effect the desired purpose, and to use as few heats as possible; too frequent and overheating steel abstracts the carbon, gradually reducing it to the state of forged iron again. It is an idea of many men, that so long as the steel does not fly to pieces when they strike it with the hammer, it is not too hot; but it is an erroneous idea, and easily proved when it comes to be used; still it is an idea that many men will maintain, but only for the want of knowing better, and I hope that this will have the effect of altering their opinion. I can safely say that no man will ever injure the steel by being too careful how he takes his heats.

WELDING CAST STEEL.

According to the same authority, cast steel may be welded as readily as iron, and without the use of that metal, by using a flux made after the following receipt: Take sixteen parts of borax and one of sal-ammoniac, boil them over a slow fire for an hour, and when cold grind it into a powder. The steel must then be made as hot as it will conveniently bear, and the borax used as sand."

The Use of Steel Rails.—The employment of steel instead of iron for railroad tracks is a matter that is awakening considerable interest in scientific circles, as well as among practical mechanics and engineers at the East. At the regular monthly meeting of the Franklin Institute for December, the Secretary made especial reference to it in his report. Whenever they have been introduced the wear is said to be scarcely perceptible to the closest scrutiny; while iron rails, on roads over which a large amount of heavy traffic is daily passing, require to be replaced as often as once in eight years. There are two objections, however, that still preclude their very extensive use—their liability to break under heavy pressure when subjected to severe frost, and the great expense of their first cost. The first of these objections can be remedied by additional strengthening of the supports, and the improvements now being introduced for increasing the *toughness* of steel; while the increased facilities for their manufacture is fast obviating the second difficulty.

A New Knitting Machine, for family use, and intended to relieve the ladies of the irksome and unpleasant task of knitting by the hand, such articles as are needed in every family, is now being introduced into the Eastern States. It will in the short space of one half hour, convert a ball of yarn into a pair of stockings. It is capable of knitting a great variety of articles, and can be used by every housekeeper. It is simple in construction and its operation can be easily acquired by any person of ordinary capacity and judgment; is neat and ornamental in its construction, occupies but little space, and can be fastened to a table like an ordinary sewing bird.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted, no further agency expenses ensue. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the objection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instalment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of an article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every application for a patent, for seventeen years	15
On every caveat	10
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

DEWEY & CO., Agents,

One copy, six months, in advance,..... 3 00
☞ For sale by Carriers and Newsdealers. ☜

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, Jan. 13, 1866.

A State Mining Convention.

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. B. WHITCOMB, Recording Secretary.
San Francisco, December 6, 1865.

COPPER SMELTING IN CALIFORNIA.

In an editorial article in the *Evening Bulletin* of the 10th instant, on the subject of "Copper Smelting," that paper commits several egregious errors, which come within our province to correct. The subject of copper-smelting is now pretty well understood by all who are seriously engaged in the business, and there are no good reasons why errors or mistakes need be made. Mining for copper has been carried on in California for some four years; and copper smelting has been practiced for about two years. If failures have been made, they must be attributed either to experiments in untried processes, or to a lack of information upon the subject, which is within the reach of all.

1st. The *Bulletin* says: "At present ores under 18 per cent. are not considered profitable "to mine." This is quite a mistake. The Union, Keystone, Calaveras, Empire, and Napoleon mines have shipped ores of 15 and 16 per cent.; and sometimes C. T. Meader & Co. have shipped profitably 14 per cent. ores. The fact is, it is impossible for any one to generalize what is the lowest limit of percentage which will pay; the conclusion depends altogether on the locality of the mines, and the means of transportation. According to the *Bulletin*, it would seem that all the mines are equidistant from San Francisco, and that all copper ore comes through Stockton; thus ignoring, in a manner, the mines of Amador, El Dorado, and many other counties.

2d. That paper speaks of the *uncertainty of the yield of ores*. Now, there is scarce anything which can be more exactly ascertained than the percentage of copper contained in ore, and both seller and purchaser may know what they sell and buy. There is a very plain and easy way of sampling, adopted by people engaged in that kind of business; it consists in taking one sack out of every 50, 75, or 100, which is crushed in a stamping mill; then carefully mixed—half of that taken off; then mixed again; then half of that taken off, and the balance again mixed; and so on, until the mass is reduced to a quantity of six or four pounds, or less, which is then divided into four packages—two for two separate assays, from which an average is taken; the two others are kept as reference in case a third assay should be necessary.

3d. The *Bulletin* says that the great bulk of the copper ore obtained in this state is shipped "to be smelted in Swansea, Wales, while the "balance is shipped to Boston for the same pur-"pose." If the writer in that paper will consult its own columns of January 2d, only a week previous, he will learn among the shipments from this port for 1865, the following facts with regard to copper ore:

Shipped to Boston, 170,305 sacks.....10,644 tons.
Shipped to New York, 120,451 sacks..... 7,528 "

Total.....18,172 tons.
Shipped to Great Britain, 172,197 sacks...10,762 "

Total of copper shipments for 1865,...28,934 tons.

The *Bulletin* evidently ignores the existence of New York in our copper shipments. We have reckoned each sack of ore at 125 pounds; rather under the average weight, if anything. The bulk of California copper is *not* shipped to Swansea, but to our own furnaces at the East.

4th. The *Bulletin* calculates an expense of $4.50 for sacks for each ton of ore. That amount is wrong; a buyer of ores accounts, or at least should account, for all sacks which are not worn out and destroyed during the trip from this port to Swansea or Boston. The Union mine and Keystone get one-half, and often more, of their sacks back; and sometimes a sack makes *three trips*; and sometimes sacks are only used for carrying the ore from the mine to San Francisco. This is done when several hundred tons of one-grade ore are forwarded; in which case the ores are shipped in bulk; that is, they are emptied into the hold. That system of shipping has been much used lately, and to advantage—whether to the profit of the miner or shipper we know not.

5th. The *Bulletin* says: There "cannot be such a difficulty in smelting copper ores that the cost here will exceed that of smelting in Swansea, where, to use extremely poor ores economically, they grade their ores for smelting down to 4 per cent. By the *Swansea pro-*"*cesses* at least seven smeltings have to be "gone through with before commercially pure "copper from sulphurets is produced. We "have no such low grade ores as to require "such a percentage on the score of economy, "and, consequently, a less number of smelt-"ings and handlings will counterbalance the "increase of cost in smelting at the mines."

There is not more difficulty in smelting, properly, copper ores, than in smelting iron ores and manufacturing engines, building ships, or any such like; it requires only men who understand their business—and as to the cost, the position of California can be very clearly defined. Say that, at the lowest rates, we pay $35 per ton for shipping a ton of ore to Boston and Swansea. For how much less can we afford to smelt here? The difference will constitute the profit—less the freight of the pig copper to a market (because we cannot calculate on consuming more than one-twentieth part of our production at home;) besides giving employment to many laborers.

It is a mistake which is not confined to the *Bulletin* alone to suppose that Swansea smelters *grade* their ores down to 4 per cent.—they generally bring them to an average of 6 per cent. and often to 8—grading their own ores up, and the foreign ores down.

There is not such a process known as the "Swansea Process;" we know only of the "Welsh Process" being used in Wales; nor is this process performed invariably in "seven operations." When carbonates are in the market, which is generally the case, the total operations amount to six, sometimes to eight—the number of the operations depending generally upon the character of the ores; but sometimes being determined by the custom of the smelter, with but very little reference to the characteristics of the mineral.

Nor is there anything to justify the *Bulletin* in concluding that since we have richer ores, we need not go through the same number of operations—whether the Welsh smelter works 4 or 10 per cent. ores, he goes through the usual routine. It is only in case he has to smelt a particular class ore such as carbonates and oxides, together or separate, that the number of operations can be diminished.

But what is the use of dwelling so much on the Welsh process in connection with smelting copper in California? It is of no practical use to us since that system cannot be adopted here. Up to this day there are many people who think that none but Englishmen understand how to work copper successfully—or at least that none but the Welsh system is good for smelting copper. Nothing can be more erroneous.

There are three ways of working copper ores; smelting in reverberatory furnaces, smelting in blast furnaces and treating by lixiviation. In France, Germany, Sweden, Norway, Russia etc., they use generally blast furnaces; in England, Spain and Chile they use reverberatory furnaces; in the United States, they use both; but blast furnaces much more than the others. What is the reasons of such difference? In all countries the art of smelting copper is well understood, but the work is performed according to the conditions of price, quality of fuel and labor. In England, where fuel is cheap and good; where experienced help is found in abundance and paid but little, the reverberatory furnace—Welsh process—flourishes. In California where there is no mineral coal fit for smelting purposes, where the required kind of laborers are few and wages very high, *we must* employ blast furnaces. Any attempt to copy, here, the Welsh process, will result in a failure—*vide* Antioch. Therefore what is the use of talking of Swansea smelting and calculating on that for our copper interest?

6th. In speaking of the Plumas Copper Smelting Company, the *Bulletin* seems to ignore the fact that other similar works have been established in this State.

There are the Meader Smelting Works, at Copperopolis, where nearly 3,000 tons of eight per cent. ores were smelted last year. These works will be augmented this year to a capacity of twenty furnaces, so that ten may always be running, with a capacity to smelt 100 tons of ore per day.

There is the Chowchilla River Copper Smelting Company, in Mariposa county, where they have been working for the last fourteen months.

There are the Tauntou Works, at Campo Seco, Calaveras county, which have been running actively and successfully since October last.

There are copper smelting works now in process of erection in the neighborhood of San Francisco, of which we shall probably speak more fully in future.

7th. The *Bulletin* tells us that the Plumas Copper Smelting Company shipped ten tons of commercially pure copper," "assaying 96 per cent.," and that the metal was obtained by one smelting. Now, 96 per cent. is *not* commercially pure—98 per cent. is hardly so. We have not seen these ten tons of copper, but we doubt very much that they have been obtained *by one smelting*. We are perfectly aware that metallic copper can be obtained by the first operation; all that is necessary for that is to carry the oxydation and desulphurization to a high degree, and then the product of the furnace will be about two-thirds matte, of from 33 to 45 per cent. copper, and *one-third* metallic copper, containing from 75 to 90 per cent. of copper; the proportion of 96 per cent. must be exceedingly small. That operation is what the German furnaceman calls *reichschmelzen*. But we never heard before that *all* of the roasted ore charged in the furnaces yielded its copper in the shape of 96 per cent. purity! At any rate, some matte, or *regulus*, as it is also called, must have been produced with that 96 per cent. copper!

8th. The process of roasting or calcining to which the *Bulletin* alludes, is nothing new—it having been practiced for the last 800 years, and has been repeatedly described in the columns of the MINING AND SCIENTIFIC PRESS. What is certainly new, though, is the statement made that *the base metals are all destroyed*. What! sulphur, nickel, cobalt, manganese, arsenic, antimony, etc., have all these been expelled? What has become of the iron, lead, phosphorous, etc.? Truly, this is the greatest achievement ever accomplished in metallurgy! Just see, we are accomplishing in California, by one operation, what requires in England six, seven and sometimes eight operations.

9th. The *Bulletin* then adds, "What loss of copper, if any, occurred during the process, we have not learned." Let us inform the scientific editor of the *Bulletin* that there is *never* any furnace operation without *some loss*. In Germany the slags assay from one-half of one per cent. to seven-eighths. The poor slags of the Meader Smelting Works, at Copperopolis, assayed for a long time only one per cent.

10th. The *Bulletin* says: "The process was discovered by John C. Chapman, a farmer in Genesee Valley, who had no practical knowledge of copper mining or smelting."

Now, let us inform the lucky farmer of Genesee Valley, or any other man, that if he can treat nine per cent. copper pyrites in such a manner, he can command a million of dollars for his process in England, and as much in the United States; for, if the *Bulletin* is correct, Mr. John C. Chapman has found what metallurgists and chemists have been seeking for, in vain, for a century.

In another passage, the *Bulletin* says, in speaking of the roasting process: "The wood being ignited, the heat causes the sulphur in the ore to burn and consume itself," etc.

Now, that is not exactly the case; if the roasting operation is well conducted, only a small proportion of the sulphur is *burnt*, and such a degree of heat only is generated as to cause the lumps to dilate and to allow the sulphurous fumes to escape along with *some* of those base metals, such *as can* be evaporated.

THE GOLD-BEARING ROCKS.—Owing to circumstances which it is not necessary to explain, Prof. Rowlandson's series of articles on the Age of Gold-Bearing Rocks will be continued a few weeks more. In the course of the papers which will issue in future, a brief *resume* will be given of the geological circumstances accompanying the most celebrated ancient and modern gold fields. Those who have followed the Professor in his articles up to the present time, must have observed that, on exclusively chemico-metallurgic grounds, he has for many years been disposed to deem it probable that auriferous and argentiferous veins would be found enclosed among *other* rocks than those of palaozoic age; among which rocks *only* it has heretofore been ably and successfully contended by Sir Roderick Murchison, and admitted as an axiom by geologists generally, that such veins could be found. From the manuscript already in our possession, we venture to predict that the future papers will not flag, but will increase in interest. Should the Professor fairly establish, as a fact, that gold and silver veins exist in rocks of more recent date than those only which have previously been accepted as the matrices of the noble metals—not only on the American continent, but also in other parts of the world—the fact will form a memorable era in the history of mining; and challenges especial attention, when it is remembered that the inferences arrived at have been drawn, by purely scientific deduction; quite as much so as the predictions of Le Verier and Adams as to the existence of the planet Neptune, prior to its becoming visible through the aid of the astronomer's telescope.

TO CORRESPONDENTS.—The following communications have been received, and are on file for publication:

Continuation of "The Age of Gold-Bearing Rocks," by Prof. Rowlandson.

A letter from Capt. Samuel Adams, on the "Successful Navigation of the Colorado River by Capt. Thos. E. Truworthy, of the Pacific and Colorado Steam Navigation Company."

A communication from Lower California, by "Aviador."

A letter from Partzwick, Mono county, Cal., by "X."

Markleeville correspondence, from "Sirrom."

"Hotel Telegraph," by J. Mosheimer.

"Table Mountain," by J. A. Jennings.

Letter from Nevada City, by "Nevada."

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

San Francisco, Saturday Morning, January 13th, 1866.

There is an ample supply of capital offering for loan purposes, and the prevailing rate in bank is now 1¼ ₱ cent. per month. The late decision of the Supreme Court of Nevada, declaring the Specific Contract Law of that State to be in conflict with the Legal Tender Act of Congress, has created the greatest disappointment here, in both mining and commercial circles. We have no space in these columns to review this decision at any length; but must call attention simply to one or two prominent considerations. It is a well known axiom of jurisprudence, and lies at the very foundation of it, that *law is in order to equity.* No construction of law, therefore, which contravenes the great principles of equity can be right. That such was not the intention of Congress is evident from the practice of Government itself under the Legal Tender Act, in all its dealings with the people. It has invariably recognized the difference between its coin issues and paper issues, has made and faithfully performed its contracts in both. The significance of this course is unmistakable, and it is a libel upon the Government to invoke its authority in justification of villainy. It is a distortion of the law, and not a correct interpretation. It is wrong, and subversive of all law.

The Supreme Court of Nevada dwell much upon matters of public emergency and public policy, as justifying the Act of Congress to which they have attached so odious a meaning. The Act itself was doubtless warranted by the emergency; but what emergency could warrant the sacrifice of public honesty—of good faith among men—sanction the most flagrant and universal infraction of justice and honor. It is unnecessary to say that no law of the Congress of this Nation could have any such intent, nor can it be justly liable to any such interpretation.

We learn that the case which has called forth these remarks is to be reopened next week, and another hearing granted, with argument of counsel, which had been supposed unnecessary before. And it is confidently believed that the decision will be reversed, and the vital interests of the State thus shielded from its paralizing influence. We are happy to believe that public sentiment in Nevada is not with its judiciary in this matter; that there is a broad substratum of honor and integrity which will speedily reveal itself, and scatter to the winds this feeble emanation of ignorance and prejudice. From the recently published Report of the Hon. Secretary of the Treasury, it is evident that the whole power of Government is now directed to the establishment of a sound currency—the restoration of a specie basis. We are greatly mistaken if the loyal people of Nevada are not on the side of Government.

The Mining Share Market has been comparatively steady this week, with a fair degree of activity in most stocks.

Gould & Curry has met with small sales within a range of $850, seller 30, ex-dividend, and $900 cash, closing at $865. Operations at the mine and mill present no new feature, and receipts of bullion thus far the current month are about up to the usual average. The various drifts from the lower stations are progressing rapidly. We are informed that no dividend is likely to be declared for the present month, but that one is contemplated within two months from the date of the last.

Savage has been actively dealt in, and some 175 feet were sold, advancing from $745 to $765, receding to $690, rallying to $712½, and selling yesterday at $710@$712½. The winze sunk from the fifth or lower level is now down some 75 feet. The deposit of ore through which this has passed is said to be a little irregular and uncertain in some places, but its general features indicate the presence of a promising body of valuable ore in this part of the mine. The entire product has averaged some 100 tons per day recently.

Yellow Jacket rose from $440 to $460, declined to $435, rallied to $450, dropped to $430, seller 10, was then dealt in at $445, and sold yesterday within a range of $450@$465. The aggregate yield of bullion for the month of December amounted to $80,672.92 from 2,722 tons of ore—an average of $29.63 per ton. The indebtedness of the the company January 1st, amounted to $191,503, crediting the recent assessment in full. The ordinary expenses of the mine and mill, last month, were less than $65,000, but some $20,000 additional were expended upon improvements to the south shaft, new machinery for the mill, supplies, etc. During the present month 100 tons of first class ore, worth $250 per ton net, will, it is said, be taken from the mine, and better results are anticipated from the second-class ore.

Crown Point has been rather inactive, declining from $585 to $550, rallying to $555, and selling yesterday at $570@$575. During the week ending January 5th, 243 tons of ore were taken from this claim. The west stratum of ore in the lower level is looking well, and promises to be fully as wide as at the bottom of the incline from the 230-foot level, some 15 feet.

Ophir rose from $317½ to $340, receded to $310, rallied to $345, and sold yesterday at $345@$350. During the last half of December, 177 tons of ore were sent to the Reduction Works, averaging $155 per ton, and in the entire month 708 tons were hauled to the River Mill, yielding an average of $47.67. A small body of very rich ore was found recently in the 4th gallery, and operations in the 9th are, it is said, progressing satisfactorily. Receipts of bullion since January 1st, have amounted to $21,500.

Empire Mill and Mining company has been sold within a range of $200, seller 90, and $270 cash, closing at about $250. The product of ore for the month of December exceeded 2,000 tons, and the receipts of bullion amounted to some $42,000. The average daily yield of the mine is now about 70 tons, and the company are accumulating a surplus.

Alpha rose from $205 to $217½, fell to $190, and sold yesterday at $190@185. Hale & Norcross has been dealt in within a range of $220@290, closing at $270 asked. Belcher fell from $150 to $140, and closed yesterday at $130.

Chollar-Potosi has been dealt in to the extent of some 500 feet, steadily declining from $150 to $136, and selling yesterday at $137@$147. During the seven months ending November 30th last, 12,192¼ tons of ore were sent to custom mills, producing, in the aggregate, $397,664, or an average of $32.61 per ton, and 12,028 tons were sold at an average of $7.67 per ton. The amount paid to mills for crushing was $224,195, an average of $18.38 per ton. The actual cost of mining the ore has been $171,596.13—an average of $7.08 per ton. The two small bodies of ore on the fourth station of the Chollar and the 485 feet level in the Potosi have been entirely worked out, and at present the ore is being taken from the untouched bodies of low-grade ores, and the old workings in the Bajazet ground, Grass Valley level, Grass Roots station, and the station between the third and fourth Chollar. During the week ending January 5th, 403 tons of ore were sent to custom mills, 306 tons were sold at $8 and 35 tons at $5. The new shaft is now timbered to a depth of 538 feet, and the drift to the ledge in 110 feet. The total expense incurred in the progress of this work to November 30th, exceeded $110,000. The cost of crushing ore is now about $16 per ton to this company.

Imperial is in rather better favor, advancing from $105 to $113, and selling yesterday at $116@117. Receipts of bullion last month exceeded $74,000 from some 3,000 tons of ore. Out of the net earnings since November 30th, $31,264 have been applied to the liabilities of the company, which now in the aggregate amount to $37,500, and will mature at the close of January, February and March.

Bullion rose from $30 to $36, and then sold at $37@36½. Overman was dealt in at $39@41½, closing at $42. Sierra Nevada rose from $7½ to $13, and sold yesterday at $11½@9½. Lady Bryan rose from $1¾ to $4⅞, fell to $2½, and closed at about $3.

The aggregate sales of stocks since Saturday last amounted to $755,506.

Blind Springs District, Mono County.—We learn from Mr. J. S. Jameson that this district is located forty-five miles southeast from Aurora, and promises to prove very rich. The Sierra Blanca Co., incorporated in New York, have already expended near $75,000, under the efficient superintendency of Dr. A. F. W. Partz, in exploring their numerous rich ledges and in making improvements of various kinds of a permanent character. They already have some machinery on the ground, and an agent of the company is now in this city making purchases of more. A company has been organized in Philadelphia with a working capital of $100,000 now ready, called the Cornucopia S. M. Co., for the purpose of working the ledge of the same name; it being one of the first discoveries in the district, and also one of the most valuable. This mine will also be under the superintendence of Dr. Partz.

Singular Railroad Accident.—A short time since as the evening train from Philadelphia, was going through the long tunnel at Port Clinton, a large piece of rock fell from the roof and passed through the middle of the rear car, carrying a seat and a portion of the floor through to the track. Fortunately the passengers who were in the car were seated at either end, and no person was injured, though all were considerably alarmed.

Rain in December.—The amount of rain which fell in Grass Valley during the month of December was 2.09 inches. The lowest point reached by the thermometer during the month was 24° above zero.

Copper Ore from Arizona.—The schooner Isabel, on her last upward trip from the Colorado River, brought to this city some of the finest copper ore ever received from Arizona. The ore is all from the vicinity of Williams' Fork, on the Colorado. A sample lot of "wash ore" from the Planet mine will yield, it is said, seventy per cent. of pure copper, and the ore from each of the different mines represented shows a marked improvement in quality as the work progresses deeper and the ledges become developed.

A number of citizens of Stockton are opposed to the proposed Stockton and Copperopolis Railroad terminating at the wharves in that city, on the ground that it will work injury to the draying business—a very poor reason; and one which, if allowed to prevail, will reflect very little credit upon the character of the city. The city of Erie, Penn., years ago, covered itself with disgrace, in the eyes of all honest business men, for carrying out a similar principle for a similar reason. We are persuaded the citizens of Stockton will be governed in this decision with regard to their road, by no such selfish object.

A Large Steel Ingot.—The operation of casting a cubic block of steel, of the enormous weight of one hundred tons, was successfully accomplished recently at a foundry at East Greenwich, near London.

An iron manufacturing company has been incorporated at Portland, Oregon, with a capital of $100,000.

REV. ALEX. CAMPBELL, the leader of a reform in the Baptist Church, popularly known as "Campbellism," died lately in Kentucky. He was a brilliant debater, and one of the most profound scholars on the continent.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,

23v11qy 423 Washington street.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a squad practical knowledge of the business.

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ....., 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of ....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

THE STATES.—Thirty-six States were in the Union on the Fourth of July last We ought to get in three more by the next Fourth, so as to number thirty-nine at that time. "The old thirteen" would then be trebled in ninety years. They were doubled in sixty years, and thirty years should suffice to add a third thirteen to the constellation. Nebraska and Colorado are all ready to come in, and there should be no difficulty in finding a third among so many flourishing Territories as the restored Union possesses.

LAND PATENTS SHOULD BE RECORDED.—Parties obtaining land patents from the State or United States, appear not to be aware that such patents should be placed on the county records. It is said that many are neglecting this requirement, an omission which may entail much difficulty at some future time.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the MINING AND SCIENTIFIC PRESS. 2v11tf

BROCKWAY'S

PERPETUAL CALENDAR

Shows without hesitation

The Date or Day of the Week

—OF—

Any Day or Date in the 19th Century,

Rendering it a prompt and accurate

ASSISTANT RECKONER,

Besides answering fully
And Conveniently
All the Purposes of the
Ordinary Counting-House Calendar
During the Nineteenth Century.

The Calendar for each month is arranged in a single column, as in the regularly published (book) Almanacs, rendering it more easy for reckoning, in most instances, than the customary Counting-House form of Calendars.

It is simply understood.

It affords the same reference from year to year.

It avoids errors.

It occupies a convenient space.

Its usefulness increases by use.

Once used it becomes indispensable,

It is worth one hundred times its cost.

Its cost is trifling, but its value is constant and perpetual. For a single reference it is often worth ten times its cost. In FINANCIAL, LEGAL and BUSINESS transactions, it saves many grave and important mistakes.

DEWEY & CO., Sole Agents

For the Copyright on the Pacific Coast.

FOR SALE only by Canvassing Agents, and at the Mining and Scientific Press Patent Agency, Book, News and Job Printing Office, 505 Clay Street, San Francisco.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes above-mentioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

THOS. B. BISHOP, Attorney. 2v12-4w

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by O. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Dennison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes above-mentioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

And in accordance with law, and an order of the Board of Trustees, made on the 12th day of December, 1865, so many shares of each parcel of said stock as may be necessary, will be sold by Messrs. Olney & Co., at No. 626 Montgomery street, San Francisco, Cal., on the 27th day of January, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. M. BUFFINGTON, Secretary.

Office, No. 10 Government House, corner Sansome and Washington streets, San Francisco. jan13

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Consolidated Silver Hill Mining Company—Location of Works: Esmeralda District, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 5th day of January, A. D. 1866, an assessment of two dollars ($2) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, Room No. 15 Government House, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 21st day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

jan13 JOHN J. MACKENZIE, Secretary.

Nevada Gold and Silver Mining Company, Lander County, Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 14th day of December, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

N. C. FASSETT, Secretary.

Office, 402 Front street, San Francisco, Cal. dec30

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

VOLUME TWELFTH.—The MINING AND SCIENTIFIC PRESS, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons" its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

SUBSCRIBE FOR IT.—The large, illustrated sixty-four column weekly newspaper—the San Francisco MINING AND SCIENTIFIC PRESS—should be taken by every miner, prospector, and intelligent citizen throughout Colorado, as it gives a mint of most useful information to be gained no other way, on mining matters generally.—[Rocky Mountain News.

Dinna Gold and Silver Mining Company, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of ten dollars ($10) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco.

Any stock upon which said assessment shall remain unpaid before Saturday, the 20th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. The said assessment being levied to pay off balances of indebtedness for improvements recently made at the mine. By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street, San Francisco. dec23

Great Western Tunnel and Mining Company, Aurora, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 28th day of December, 1865, an assessment of ten (10) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 27th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 10th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

JOS. C. FORD, Secretary.

Office, No. 21 Exchange Building, corner Washington and Montgomery streets, San Francisco. dec30

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpine County, Cal.

Assessment No. 9.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 26th day of December, 1865, an assessment of one dollar ($1) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, only.

Any stock upon which said assessment shall remain unpaid on Saturday, the 27th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 13th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. For account of assessment levied 23th July, 1865, advertised as delinquent 29th August, 1865, and offered at auction 9th September, 1865, but no bidder—

And in accordance with law, and an order of the Board of Trustees, made on the 21 day of Decomber, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the salesroom of John Middleton & Son, on the 20th day of January, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

jan6 JOHN F. LOHSE, Secretary.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Calendars for 1866.—The MINING AND SCIENTIFIC PRESS JOB PRINTING OFFICE is prepared to execute every manner of Counting-house Calendars and advertisements for various business men, on short notice and moderate terms.

Salamander Gold and Silver Mining Company, Hill Valley District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 28th day of December, 1865, an assessment of twenty (20) cents per share was levied upon each and every share of the capital stock of said company, payable on Friday, the 29th day of December, 1865, in United States gold or silver coin, to the Secretary, 121 Front street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 27th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 10th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

F. D. GALLAGHER, Secretary.

Office, No. 35 Metropolitan Block, San Francisco, California. dec30

Union Mattole Oil Company, Humboldt County, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of December, 1865, an assessment of five ($5) dollars per share was levied upon the capital stock of said Company, payable on the 16th day of January, 1866, to the Treasurer of said Company, at his office, 517 Jackson street, San Francisco, State of California.

Any stock upon which said assessment shall remain unpaid on the 19th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

C. WINTER, Secretary.

Office, 517 Jackson street. dec23

United States Gold and Silver Mining Company, Ravenswood and Santa Fe Districts, Lander County, Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 23d day of November, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 23d day of November, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at Maurice Dore & Co.'s Salesroom, No. 327 Montgomery street, San Francisco, on Monday, the 15th day of January, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

T. L. BIBBINS, Secretary.

Office, 618 Merchant street, San Francisco. dec20

Wide West Gold and Silver Mining Company. Location: Silver Mountain District, Alpine County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 4th day of January, 1866, an assessment of three ($3) dollars per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at his office, 330 Davis street, San Francisco, or to F. L. JACKSON, Superintendent, at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 21st day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

JOSEPH GREEN, Secretary.

Office, 330 Davis street, corner of Washington street, San Francisco. jan6-4w

Yuba Gold and Silver Mining Company, Brown's Valley, Yuba County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 1st day of January, 1866, an assessment of three dollars ($3) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, No. 210 Pine street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

P. R. RINGSTROM, Secretary.

Office, 210 Pine street, up stairs, San Francisco.

N. B.—The above assessment is for the payment of balance due on machinery, and its erection at the mine. ja6

Yosemite Silver Mining Company, Oro Fino District, Humboldt county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of December, 1865, an assessment of one dollar and a quarter ($1.25) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco, or to J. T. MACLEAN, Superintendent, Star City.

Any stock upon which said assessment shall remain unpaid on Saturday, the 20th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 6th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary.

Office, 402 Front street. dec23

PRINTING FOR THE HOLIDAYS promptly executed in any style to suit tradesmen, at our JOB OFFICE, 505 Clay street.

Nothing makes the earth seem so spacious as to have friends at a distance; they make the latitudes and longitudes.

Wit in Fast Colors.—It is said that the author of the "Petroleum V. Nashy" letters is a negro by the name of D. R. Locke.

A Chinese Decision.—The Chief of the Bureau of Arts and Sciences at Pekin has made a favorable report on the question of railroads, and decides that the use of steam is not dangerous to the people!

Chinese Voting in Australia.—At a recent election in Australia, the naturalized Chinamen voted for the first time, being allowed to do so by the proper authorities.

A movement so general as to indicate concert has been developed for the emigration of old and infirm persons from Ireland. Evidently, the Fenians do not desire to have their parents subjected to the dangers of the rebellion they propose to inaugurate.

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive Job Printing Office.

San Francisco, April 10th, 1865.

Economy in Advertising.—The Mining and Scientific Press is the best and most economical mining advertising medium in this city. Our terms are less than one half the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on the coast.

Deserved Testimonial.

Grizzly Flat, Oct. 18, 1865.

Messrs. Hungerford & Hendy—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
S. F. DAVIS.

MINERS

Who wish to erect Quartz Mills, Concentrating or Smelting Works, will find it to their interest to consult the undersigned, as to the best and cheapest mode of Reducing Ores. Being acquainted with all the modern improvements of Europe and America, in Mining, Machinery and Metallurgy, I undertake the erection of any kind of Works, and warrant their successful operation.

Gold, Silver and Copper Ores bought in any quantity.

Assay of Ores made by a new Fire Process in half the usual time, and at half price.

Apply to **J. MOSHEIMER,**
23v11qy 423 Washington street, San Francisco.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers.
Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

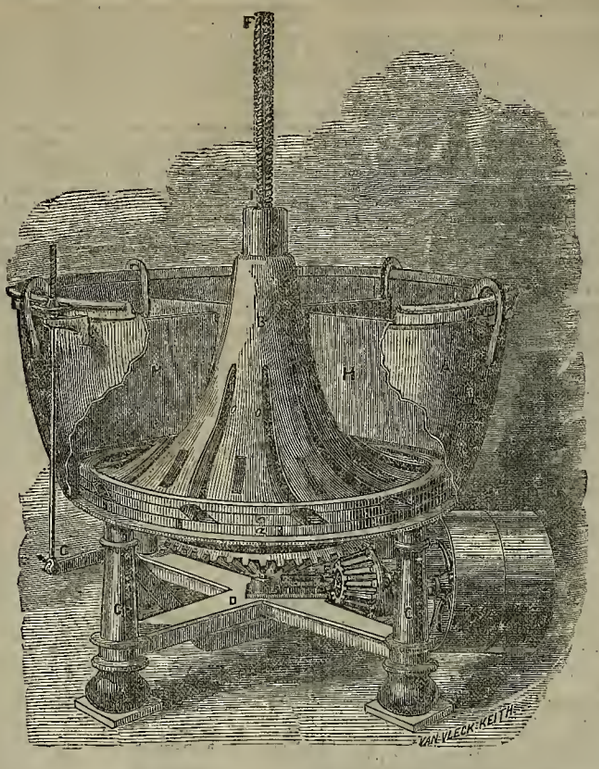
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hedgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

The Table of Contents of this book will be found on pa 415 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and o, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,
WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st

THE CANDLE FISH is one of the most curious members of the finny tribe. It is caught on the coast of British Columbia, where it is extremely common, and proves very useful to the natives. Some idea of its character and value may be gleaned from the fact that they use it as a lamp, the light given being very considerable. The fish, when dried, has a piece of rush pith, or strip from the inner bark of the cypress tree, drawn through it to serve as a *wick*, a long needle, made of hard wood, being used for the purpose; it is then lighted, and burns steadily until consumed. It is said that one can read comfortably by its light.

MINING INCORPORATIONS FOR 1865.—Eighty new gold, silver and copper mining companies were incorporated during the past year, representing a capital of at least thirty millions of dollars. Of petroleum oil companies, eighty-seven were incorporated, representing a capital of sixty-five millions—in all, not less than ninety-five millions of dollars contributed to the capital of the State during the year 1865—provided said capital is genuine. Three cotton companies were also organized.

How long Eve, the first woman, lived, we do not know. It is a curious fact that, in sacred history, the age, death, and burial of only one woman, Sarah, the wife of Abraham, is distinctly noted. Woman's age, ever since, appears not to have been a subject for history or discussion.

WHENEVER you find a great deal of gratitude in a poor man, take it for granted that there would be as much generosity if he were a rich one.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, MR. TURNER HAMILTON, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where samp copies of our publications can always be found.

Travelling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1861, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5

Machinery.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day.

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

FOR SALE!
A STEAM ENGINE!

18-INCH CYLINDER, FOUR-FOOT STROKE, IN PERfect Order. Can be seen running at the San Francisco Pioneer Woolen Factory, Black Point. Inquire at VULCAN IRON WORKS, 137 and 139 First street, or to

HEYNEMANN & CO.,
26v11tf 311 and 313 California street.

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet

—TO THE—

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5,00.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,
Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of gold nor mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

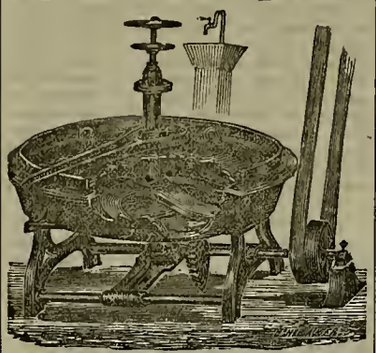
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
—AND—
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 9th, 1864.]

HEPBURN & PETERSON.

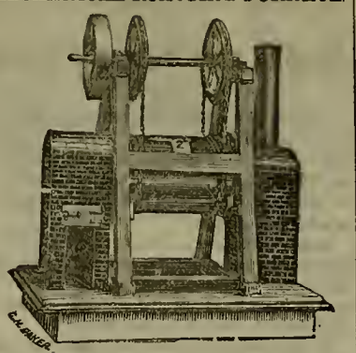
HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 416 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person, and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

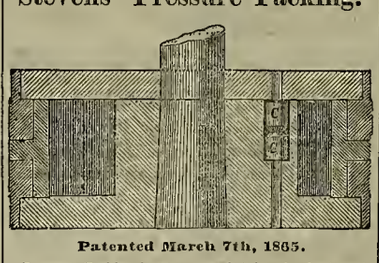
Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df **ANDREW STEVENS.**

SALMON'S
PROPELLOR AMALGAMATOR
—AND—
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

9v11 **J. & W. C. SALMON.**

McCOMB'S
CUMULATIVE POWER PRESS

No. 1 Government House, cor. Sansome and Washington sts. 23v10 3m

STOW'S
PATENT CHAMBER DRILL.

The greatest Labor-saving Machine ever invented for Quartz Mining. By using this Drill in shafts, tunnels, and all other rock blasting, three-fourths of the labor and over one-half of the powder will be saved. The Drill makes a chamber directly at the bottom of the hole, at any depth you wish, six times the area of the original hole, in all kinds of rock, in less time than a man can drill a 1½ hole two inches deep. Requiring no tamping, it will be impossible to have a premature blast.

AT THE STATE FAIR held in Sacramento, September, 1865, a Committee, after examining both the Lincott's and Stow's Chamber Drills, reported as follows:

We, the undersigned, Committee on Mining Tools, do award to Henry M. Stow, of San Francisco, the FIRST PREMIUM for the best Chamber Drill for blasting rock, for the following reasons:

1st. For simplicity of construction.
2d. For durability of drill.
3d. For strength of drill.

The above Drills will be sent to any part of the State for $30, with one set of Cutters or Chisels that will chamber from 75 to 150 holes. Extra Chisels furnished at $2 50 per set.

The Drill may be seen at Mr. BUFFINGTON'S Office, No. Government Block, corner Sansome and Washington streets, and at No. 511 Market street.

Drills will be delivered to any part of this State free of expense to the purchaser. Any information desired, or orders for Drills, address

STOW & COLLINS,
San Francisco

Oil Wells! Oil Wells!!

I received at the last STATE FAIR a special Premium for the best Expanding Drill for boring oil wells. The above Drill will bore the hole from ½ inch to 2 inches larger than the inside of the pipe or tubing of the well, if desired, making the bore perfectly straight and round. The Drill can be attached to and work with any common drill at an expense of from $25 to $50. I will furnish all machinery for boring, or will take contracts for boring wells, and furnish steam engines and all tools required. Address,

HENRY M. STOW,
14v11 San Francisco.

WATER WHEELS!

Equal to the Best Overshot Whee

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30¼. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.
These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The carved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the **PACIFIC FOUNDRY,**
1v1 San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLACHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 820 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.
San Francisco, Aug. 22d, 1865. 10v11-3m

QUARTZ MINING NEAR AUBURN.—We have been shown, hy Mr. George A. Treadwell, a rough diagram of a mineral district situated at Ophirville, three miles helow Auhurn, Placer county, which presents eome very interestiog features, and is indicative of a valuahle tract of mineral country. The diagram exhihits a eeries of fourteen east and west lodes, crossed at right angles hy six north and south lodes. Theee lodes vary from two to four feet in thickness, and are from one hundred to five hundred feet apart. Two of the east and west veios carry considerahle silver, and two others a notahle quantity of copper. All the balance containing of the precious metals, gold only. These veins are found to he much the richest at the points of crossing. The sulphurets are said to assay from $1,000 to $3,000 to the ton, wben properly concentrated. A company has been formed which proposes to cut all of these veins hy a tunnel, running diagooally through hoth series; all that have heen discovered, twenty in numher, will he cut hy running this tunnel 4,500 feet, draining the lodes from eeventy to seven huodred feet in deptb. Thie project can scarcely fail to he a most profitahle one for hoth the projectors and the vein bolders. There are three quartz mills already at work upon rock which ie heing takeu from these veins, as follows:

A steam mill running ten stamps, owned hy Mr. Welty, and employs for amalgamatiug four of Varney's pane—recently started with flatter-ing proepecte.

A 5-stamp mill owned by Mr. Snohle, uses blankets, but no pans. This mill nets about $500 per week, saving the free gold only, and runniog away a large amount of valuahle sulphurets.

A 7-stamp mill, driven by a 30-foot overshot water-wheel, is run hy Mr. Pugh. He uses an arastra for grinding his sulphurets; but the yield is emall, as he does not roast them. He has no pans.

No value whatever has been placed upon the sulphurets ohtained from these ledges. Recent experiments, however, having sbown that they are very rich in gold, arrangements will soon he made for roasting them. Our informant, Mr. Treadwell, bas just organized a company, which consists of Messrs. Daniel and Moses Choate, of Ophirville, and eeveral parties in this city, who will proceed at once to erect a fourth mill on two of the ahove veine, known as the North Star and Lady Lincoln. The company will put up a 10-stamp mill at the start, to he increaeed in capacity as circumstances may warrant. They will also put up a roasting furnace for desulphurizing the sulphurets. The mill will he run hy water-power, which can be obtained from the Bear River Ditch, at a cost of $30 per week, running night and day.

THE FIRST BRICK ever made from bullion taken out of the Gould & Curry mine, is still preserved in the office of tbe company in Virginia City. It was taken out in 1860, is principally of silver, and worth ahout $100. It is about five inches long, three inches wide aud three-fourths of an inch thick, aud its value, as heing the first hrick from that noted mine, is far more than its intrinsic worth as mere hullion.

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property aud Business Places of every description, in the city and throughout the State; procures partners with largo and small amounts of money; negotiates sales o mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mecbanics and Professional Men of the Pacific Coast, which cannot he dcrived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public hencfit to every local community in which it circulates.

The prospects of our journal are now hrighter than at any former period. Our facilities for furnishing a valuable journal are constantly increasing.

Following are some of the many opinions generously expressed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information on the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Na.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the GOLDEN ERA.
" Professor Clearquill," in the Golden Era.
" Dogberry," in the Golden Era.
" Alice Mason," in the Golden Era.
" Hugh Humphrey," in the Golden Era.
" Bill Dadd," in the Golden Era.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

CALIFORNIA MINERS' STATE CONVENTION.

The Convention assembled at Dr. M. C, Briggs' M. E. Church, Sixth street, Sacramento, Wednesday, January 17th, and was called to order by A. J. Snyder, President of the Mining Bureau, at 2 o'clock. Mr. Snyder proceeded to read the Call for the Convention as follows:

Pursuant to the request of several mining journals and representative mining individuals, the association known as the "California Mining Bureau," of San Francisco, through their Board of Trustees, have issued the following call for a Mass Convention of the miners of California:

RESOLVED, That a Mass Convention of the miners of the State of California, be and is hereby called to assemble in the city of Sacramento, on WEDNESDAY, the 17th of January, A.D. 1866, at 12 o'clock, and that any person engaged in actual mining operations shall be eligible to a seat in said Convention.

JOSEPH W. LOW, Vice-President.
J. A. WARREOMB, Recording Secretary.
San Francisco, December 6, 1865.

On motion of Mr. Foulke, Hon. A. A Sargent, of Nevada, was elected temporary chairman, and took his seat amidst hearty applause. Mr. Sargent said:

Gentlemen of the Convention: Although the clouds are lowering and the rain falling fast, I congratulate you upon this auspicious day. Congratulate you upon this excellent weather, dear to all miner's hearts [applause]; and I regard this weather as the appropriate herald of our appearance here. For three years past, miners of California, we have had dry seasons. The heavens, even during our winters have, for the most part, been as brass, and everything has been parched and dry. While there has been some compensation for that to the quartz miners, because it has led to larger investments of capital, labor and energy in the development of that branch of mining, yet in respect to the interests of our placer mines, it has been almost disastrous. And at the same time we have sympathized with every portion of our State which has suffered from the same cause. We felt sorry that our agricultural friends, upon whom we depend for the staff of life, should have had the springs of their prosperity dried up. We meet here to-day in no spirit of exclusiveness. If the mining interest prospers, if we are enabled to take out large amounts of the precious metals from our mines, if they are fostered and developed as they should be, then we in the mining districts shall furnish fine markets for the manufactures of San Francisco, for the farmers' throughout the State, and all the interests of the State will prosper. We are all contributors to a common end, all portions of the grand machinery, and we prosper or suffer together. Nothing can be truer than that agriculture is one limb of the State, or of the business interests of the State, mining another, and manufacturing another, and it is necessary that decay shall be kept from each in order that the whole body may be sound. [applause.] There are peculiar reasons why this Convention should be assembled here to-day. A pregnant fact was that which a few days ago was telegraphed across the continent to us, that when that bill prepared by Senator Sherman, of Ohio, and which I may properly characterize as a bill to create confusion in the mining districts of the country, was introduced in Congress, and when a resolution was telegraphed back in response, stating that the people of California were opposed to the sale of the mineral lands, that response was received by Mr. Sherman and others with astonishment. Why, gentlemen, if they knew barely the A B C of the mining interests of this State and the adjacent States and Territories, they must have known that such a law would inevitably work most irretrievable confusion, not only to the mining but to all the business interests of our communities. Here are mining interests and business interests which have been going on and intertwined for the last fifteen or sixteen years, and it is proposed now to dissever them at a blow without drawing blood. It is impossible.

The speaker proceeded to refer to some of the most absurd and impracticable features of Mr. Sherman's bill, his remarks being received with emphatic approval, and his closing sentence as follows:

It is, take it altogether, a bill of abomination, as I have no doubt every miner will regard it. I am sorry that the impression should have prevailed at Washington that we in California favor anything of the kind, and I think it is time that an emphatic voice should go forth from us, announcing that we are unqualifiedly opposed to it. I have no doubt that it will be the tone, as I conceive it to be the principal business, of this Convention.

M. D. Boruck, Warren B. Ewer, and Charles Westmoreland, were elected Secretaries.

A Committee on Credentials was appointed by the Chair, consisting of one member from each county, viz.:—Alameda, E. D. Waters; Alpine, W. A. Johnson; Amador, L. McLean; Butte, Charles Waldeyer; Calaveras, Robert Briggs; El Dorado, J. J. Williams; Humboldt, J. F. Heustis; Klamath, L. H. Murch; Mono, Bryant; Nevada, Wm. Watt; Placer, C. J. Garland; Sacramento, John Bigler; San Francisco, A. J. Snyder; San Joaquin, P. J. Merwin; Sierra, J. W. Moyle; Siskiyou, A. J. Luttrell; Sonoma, J. L. Downing; Tulare, J. W. Freeman; Tuolumne, Allen Oliver; Yuba, A. F. Williams; Yolo, C. F. Reed.

It was voted that persons actually interested in the ownership or working of mines, who are present from counties not represented, be admitted without credentials.

After a session of about three hours, the meeting adjourned until 7 o'clock P. M., for the purpose of giving the Committee on Credentials time to prepare their report.

The Convention is a large and animated body. The church was crowded. Some of the prominent mining counties are represented with quite large delegations, while all are commendable for the intelligence and earnestness of their representatives.

It is a matter of congratulation that the actual miners of our State have come out in sufficient force to assert and maintain their right to be heard and to act for themselves.

We rejoiced in seeing the wide-awake and alert spirit manifested by mountain members, and to observe the premeditated schemes of the "light mining brigade" collapse most beautifully at the first touch by the hands of the miners.

EVENING SESSION.

The Committee's report on credentials was adopted, with a resolution disallowing the reception of proxies by any one, but reporting in favor of the admission of substitutes.

The roll of members, as hastily furnished us by the Secretary on Thursday, is as follows:

ALAMEDA.

THE AGE OF GOLD-BEARING ROCKS.

BY PROFESSOR ROWLANDSON, F. G. S. L.

NUMBER XI.

AN ATTEMPTED RECONCILEMENT OF OPINION.

The attentive reader, who has followed me throughout, will have inferred that, so far as causation is concerned, the writer makes no difference between ordinary mineral veins containing copper or lead only, or where such are associated more or less with argentiferous and auriferous minerals. I consider it highly probable that the two last named were only very recently erupted to the earth's surface, as compared with many copper and lead veins found in the olden Paleozoic rocks; also that where veins are found to contain gold and silver in notable quantities in the more ancient strata, a careful investigation will generally establish the fact that such argentiferous and auriferous minerals were injected during a very recent geological era. If subsequent inquiries establish, as a fact, the opinion just set forth, it may easily be conceived that the theory which assigns the formation of the most productive gold and silver veins, to a recent date, is intimately related to, and in some measure explains why it is probable that many such may exist in rocks of secondary or even more recent age.

In illustration of the above views, as well as another to be afterwards alluded to, I will respectfully call Sir Roderick Murchison's attention to the lesson exhibited, as respects mineral veins by a portion of Siluria, which, so long as geology remains a science, will ever form its most classic ground—the vicinity of the Longmynddand the Stiper Stones which divides the unmetalliferous district of the Longmynddfrom the highly metalliferous (galena) ores of Corndon and Shelve, accompanied, as the later is, by the protrusion of igneous rocks, whilst the Longmynddis devoid of such.

The Longmynddforms the lowest strata of the Silurian series, being, in fact, the base line of the entire system. This district, unmetalliferous and non-erupted, is divided by a sharply-defined and almost right line, at the Stiper Stones, from the eruptive and metalliferous rocks composing the Corndon and Shelve; yet, the latter, in the order of position, is superior to the former, of which fact there does not exist the slightest doubt. It follows, therefore, as a necessary consequence, that the igneous rocks of the Corndon and Shelve must have first penetrated the underlying Longmynddrocks before they could have protruded through the Lingula and Llandeilo flags, which are superposed on the Longmyodd rocks; unless, as might occur according to a theory held by many, viz., that the action of a central heat has been sufficiently intense to render fluid the underlying Longmynddrocks, which afterwards were ejected in the form of the Plutonic rocks now seen* in the district. The entire absence of igneous rocks in the Longmynddand their abundance in the Corndon and Shelve district, lends considerable aid to the view that igneous rocks are frequently, if not geoerally, the result of the igneous metamorphism of pre-existing alluvial strata. Additional corroboratioo of the soundness of this theory is afforded by what is found to occur in a nearly identical manner in Merionethshire, the western part of which county, forming a considerable district to the eastward of Harlech, consists of rocks identical in age with the Longmynddistrict. Here, also, there are no erupted rocks and no mines; but the traveler no sooner passes into the district coosisting of the Llandeilo flags than he meets with igneous rocks accompanied with copper, lead, silver, and gold ores.* I suspect, however, the date of the irruption of the rocks in this part of Wales is much later than those found in the Corndon and Shelve. Although Sir R. Murchison has seeo fit to color in his map a large part of the Isle of Anglesea as crystalline metamorphic rock, I make very little douht hut a closer examination will establish the fact that this effect has heeo caused in consequence of the internal heat being locally more powerful, or by its more continued actiou in Anglesea than in the Shelve, has occasioned a more perfect metamorphosis. The celebrated Parys copper mine, the most prodoctive copper mioe ever known, is situated in thie district, accompanied also by a vein of sulphide of lead, copper, zinc, silver, and gold. The vein last alluded to was ejected most probably after the main mass of copper ore had heen deposited.

We have only to admit the theory above set forth, to render it probahle that any of the ordinary metallic veins may he found peuetrating the more recently-formed rocks. In this manner the long series of Laurentian, Silurian, Devoninn, and even carboniferous rocks, which possibly formed Paleozoic Califoroia, may have become fluid and partially erupted in their metamorphic form, near their previous place of deposition; hut a far larger portion probably rolled in earthquake waves to distant points, in order to compose the bases of future Alps, Andes, Rocky Mountains, Himelahs, etc., or portions of lutore Sandwich Islands or Australins.

Allusion may again be briefly made to the vicinity of the Longmynddin order to illustrate the possibility, under a given set of circumstances, of auriferous veins penetrating the more recently-formed strata of the earth's surface. It has already heen noticed how free from plutonic eruption are the lowest rocks of the Silurinn series, forming the Longmynddwhilst the adjoining and superior metalliferous strata of Llandeillo flags, known as the Corndon and Shelve districts, are intersected throughout by igneous rocks bearing a general course from northeast to southwest. At the extreme oortheast point of the Longmynddhowever, igneous rocks exist, to a limited extent, and similar bosses are to be seen at various points to the eastward, extending in length several miles. The rocks last referred to, if synchronous with similar rocks of the Corndon and Shelve districts, the surface indications would lead to the inference that the igneous agency which caused the outflow of plutonic rocks in the Corndon and Shelve, in place of pursuing the northeast and southwest course, as found in the metalliferous region, became deflected from the north towards the east, in consequence of the presence of the Liassic† outher, which is seen about seven miles to the northeast of the Longmynddand about fifteen miles from the extreme northeast point of the Corndon and Shelve. It would not he unreasonable to infer that had the course of igneous agency continuously followed a northeast direction in place of being deflected therefrom, plutonic rocks might possibly have heen protruded through the Jurassic outline alluded to, and accordiug to circumstances accompanied also by metalliferous veins‡. Such effects might have been produced by more ways than one—first, in consequence of more intense or longer-continued igneous action occurring beneath the parts occupied by the Lias formatiou; or secondly, as previously remarked, by the older and lower formations being liquified and metamorphosed in consequence of the effects of intense internal heat. It is possible, also, that the line of igneous activity was deflected from the northwest and northeast towards the east, owing to greater resistance which other things being equal may he assumed to have been opposed to an outflow of igneous rocks through modern accumulations, in consequence of the greater weight and thickness of the latter. Mineral matter in a molten state would follow ordinary hydrostatic laws, and, accordingly would penetrate the lines and points of least resistance with an intensity corresponding to the originating dynamic force.

It is probnble, that to the circumstance just noticed, may be ascribed the fact that so many gold districts in various parts of the world are found in the Salurian zone, notwithstandiog the most positive evidence exists in many cases that the auriferous veins inclosed in the Paleozoic strata were filled at a much more recent period than that of the deposition of the rocks through which they protrude. Another circumstance may occur having a tendency to occasion similar appearances, to illustrate which the reader's attention is requested to observe what might be fairly assumed to occur, if intense igneous forces, actiog from below, had pushed up the Silurian beds lying below the Liassic strata, so as to protrude through the latter. In such a case, the soperior Liassic would be pushed outwards on the flanks of the former, at a greater or less angle, according to circumstances; and if the elevation originated subaqueously, the fact would be calculated to conspire towards a more speedy abrasion of the ruptured overlying rocks, and also facilitate the subsequent diffusion of the comminuted particles, in which case the prior, sub-lying, silurian rocks, so denuded, would occupy a large part of the surface previously covered by the Liassic formation. Assume a step more—namely, that a metalliferous vein, which, for this occasion, let us conceive to he auriferous, and we have the parallel of many gold fields. The reason why I have drawn my illustration both of actual and hypothetic comparison from the portions of Siluria above described, is because I know of no part of the earth's surface where not only has the geology been so well worked out, but also that it would, perhaps, he difficult to find, as around the Stiper Stones, another place, where within a radius of fifteen miles so wide a range in superposition of strata can be found as is exhibited in the small compass named, extending, as it does, from the base of the Silurinn system to the Jurassic, and accompanied by a variety of igneous and metalliferous phenomena, allied in general character to the present investigation; for it must he borne in mind that the writer makes no distinction with respect to metallic veins, so far as causation is concerned, whether such ore is composed principally or in part of gold, silver, copper, lead, etc., notwithstanding which, I may state that I deem it probable that future researches will show that their formation took place in time in the inverse order set forth—lead being the oldest and gold the youngest—and that possibly the lead-producing districts of Corndon and Shelve, and those of Wisconsin, Iowa, etc., will be found to form the base line of the metalliferous system.

* It is noteworthy that the galena of the Corndon and Shelve districts is of a very superior character, and much sought, for the purpose of making white lead, but almost devoid of the precious metals, not containing more than 2 oz. of silver to 2,240 lbs of lead.

* It is in this district that the gold mines are found which have recently attracted attention. In 1846, whilst collecting information for an essay which obtained a prize of $250 from the Royal Agricultural Society of England, I was shown by a miner some fine gold mixed with galena.

† Called Jurassic by French and many other geologists.

‡ The writer is quite aware that many objections can be raised to such an assumption, and not without good reasons; to rebut such, would, however, require an entire treatise on metalliferous veins. On other points the reader is requested not to be hypercritical—for instance, igneous action may possibly have commenced at the east and proceeded westerly, or the two sets of igneous rocks may, on subsequent inquiry, be found not to be synchronous.

Miners' Meeting at Grass Valley.—We learn from the *Gazette* that a meeting of miners was held at Grass Valley on Saturday evening, 13th inst., and the following persons were elected delegates to attend the Miners' State Convention, which met at Sacramento on Wednesday: William Watt, Thomas Findley, Capt. Lee, Wm. Daniels, G. D. Roberts, S. D. Bosworth, W. H. V. Cronise, James Powning, E. Northey, L. R. Walker, A. B. Brady, J. S. Coleman, A. B. Dibble, P. Roberts, R. Leech. R. A. Fisher, W. Clift, J. S. Bayliss, Con. Reilly, and J. I. Sikes. The meeting adopted a series of resolutions declaring that the miners of Grass Valley are opposed to any legislation concerning the mines, by the Legislature of California or by Congress; that they are opposed to any monopoly of timber or timber lands by railroad or other companies; that they regret the reported action of the Government in issuing patents to the railroad company to an immense domain of mineral and timber lands; that they are opposed to the main features of Pattison's bill in regard to mining claims; and indorse the action of the Legislature in requesting delay in the issuing of patents to the railroad company.

Mining about Monte Diablo.—Several companies are working cinnabar mines at Monte Diablo. The Contra Costa *Gazette* says the prospects of the Welch Quicksilver company are flattering. The stock has suddenly risen from nothing to ten and twelve dollars per foot. The Keokuk company are working on a vein of rich ore eight inches thick, and rapidly widening. The Open Sesame company are driving in a four hundred-foot tunnel, with encouraging prospects.

A Hint for California Swamp Land Owners.—Johnsoo Watson, of Scipio, Laporte county, Ind., raised this year, saye the Stockton *Herald*, 1,100 bushels of cranberries on a 10-acre marsh. Cost of gathering and marketing, $100; net profit, $4.500.

Gen. Meade expresses the opinion that 25,000 men belonging to the Army of the Potomac are living, who have been disabled by wounds and are incapable of self-support.

[Written for the Mining and Scientific Press.]

The Navigation of the Colorado River.

Editors Mining and Scientific Press:—I take the present opportunity to give you a few facts in relation to the successful navigation of the Colorado river by Capt. Thomas E. Truworthy, of the New Pacific and Colorado Steam Navigation Company, for a distance of of 600 miles from its mouth to a point within 360 miles of Salt Lake City. Why the great advantages of this important hut hitherto misrepresented stream has not been known until within the last twelve months, is a question which is daily propounded by those who are unacquainted with the influences which have been brought into requisition by those who have, from the commencement, opposed the object of the late successful enterprise of navigating the same. It would hardly appear probable that a movement of so much interest to this State, the Territories, and the general Goverument, would have met with so much violent and continued hostility, from all combination navigation companies, which are indebted to the patronage of the people for all that they are, and more especially at a time when it is of the utmost importance to California that all the avenues of trade should be open up to counteract the effects of the departure of business and population from this State, which has been and still continues to be kept up to an alarming extent.

Over two years ago, at the wishes of the miners and others of Arizona, I came to San Francisco to secure, if possible, additional steamers to meet the increasing demands of business on the Colorado. I was opposed in carrying out my mission by causes, the true nature of which I could not at that early day understand. Capt. Truworthy conseuted to come to the relief of those who had so long been compelled to submit to the imposition of those who controlled for years the old line of steamers on the Colorado. Previous to his departure, he made an arrangement to have his steamer, schooner and barge, insured in San Francisco, upon the same terms as policies were given to other vessels going to the same destination. You can imagine what was the surprise of Capt. Truworthy, when informed that the policy would not be granted *unless he paid seventy per cent. more* than was previously agreed upon. I mention this fact to show that the system of injustice inaugurated against the enterprise at that early day, has been adhered to up to the present time, and that, too, by persons controlling a wealthy corporation, who were insensible to the demands of the State, and the duty they owe to the National Government.

Upon the arrival of Capt. Truworthy at the mooth of the Colorado, *without insurance*, he at once became the center of the most violent hostility of those controlling the old line (who have since adopted his mode of navigating the river), assisted by others connected with the combination navigation company of California. Under these circumstances, he started his enterprise to prove the capability of the navigation of the river a distance of 600 miles from its mouth, and to show, by as practical demonstration, that he was able, by individual enterprise, to accomplish more than the old line had done in ten years, or than Lieut. Ives had been able to accomplish at an expense of over one hundred thousand dollars.

At Fort Yuma all accommodatioo was refused Capt. Truworthy, with the exception of a single isolated car, whilst the old line could have favors frequently granted them by those in charge of the fort, when they had done nothing for the Government except to carry freight at exorbitant prices. The Captain made several trips with his steamers and barges, with three times the amount of freight which had originally been carried by steamer to La Paz and Fort Mojave at the highest and lowest stage of water.

The manner of carrying freight by barges was pronounced at the time as a "humbug;" but you can see by the notices in the *Alta* that the old company's ships now coooect with "their steamers and barges," and have given,

hy this, their fullest approbation of the "humbug" or manner of navigating the river, as introduced hy Capt. Truworthy. The successful accomplishment of this end is of immense value to those depending on the navigation of the Colorado for their supplies, as they can thus be taken at all seasons of the year. It has produced a complete revolution in the navigation of this hitherto misrepresented river. At La Paz, 300 miles from the mouth of the river, a delegation from the Mormon settlement at Callville, came to secure a steamer to take a load of freight to that point. They had built a large warehouse at the head of navigation. The request was at first made to those having charge of the steamer of the old line. This was refused, on the ground that it was impossible to ascend the river. Capt. Truworthy then consented to make the trip with his steamer and barge, containing over one hundred tons of freight.

"A bill was at this time before Congress to secure an appropriation of $150,000, for the benefit of the old line, to remove impassable obstructions said to be in the river, but which did not exist."

Scarcely had the steamer and barge started on her destination, when parties were sent aboard to prevent persons having wood from selling the same to Captain Truworthy, and even to cut the timber on each side of the river, which was done to the letter, and for thirty miles scarcely a tree was left standing. Having been informed of this system of vandalism, the precaution was observed to take on board the barges a sufficient quantity of wood to pass through this barren waste. It might well have been supposed that the efforts to thwart the object of the expedition from the time it was undertaken at San Francisco up to this time, would have been exhausted; but this was not the case. Additional parties were set ahead to Callville, stating that it was impossible to reach that point, and that the enterprise had been abandoned; in consequence of which the Mormons, who were expecting the goods, returned to the settlements, and to Salt Lake City, leaving two persons in charge of the warehouse. Still the steamer and barge kept on their way, and not stopping until the object of this difficult enterprise had been accomplished, thereby successfully demonstrating that the Colorado river was navigable for steamers and barges for 600 miles from its mouth, without a fraudulent appropriation of $150,000 from Congress. Here, upon the face of the rocks, which stand like giant sentinels, 1,000 feet in hight are inscribed the day and date of the arrival of the steamer in letters so broad and conspicuous that even the combination navigation company can never deface them. Our arrival fully established the fact that steamers could ascend this river at all seasons.

To show how little confidence is to be placed sometimes in the expeditions undertaken by Government, it is only necessary to say that the impassable locality, known as "Explorer's Rocks," where the diminutive steamer "Explorer," fifty-four feet long, had struck, and returned seven years before, proved to be nothing but an isolated rock, on each side of which there was a smooth surface of water, from ninety to a hundred feet in breadth, having a current of only two miles an hour, with an average depth of from six to ten feet. This river was lower than when the Explorer ascended the same. But, notwithstanding this, the steamer Esmeralda, 116 feet in depth, went far above, towing a barge 124 feet in length, and capable of taking on board two steamers of the size of the Explorer.

As we descended the river to El Dorado Canon, the most magnificent scenery burst upon our view. At each change of position, new and startling beauties were revealed, the grandeur of which is so different from that of other rivers that the mind can scarcely realize that what it sees is reality. All the colors of the rainbow can here be found, extending far over the highest peaks, or confined within the narrow compass of a few hundred yards. To these favored localities the admirer of Nature can come with the fullest assurance that he can here look upon scenery which, in grandeur and magnificence, is unequalled on the American continent.

This communication, which has by individual enterprise been opened up for the population of the center of the continent with the Pacific coast, can never be closed. Soon the vast gold, silver, and copper resources of Arizona will be fully appreciated, and hundreds of thousands of people will receive their goods by way of the Colorado river.

At the urgent solicitation of the miners and Mormons, Capt. Truworthy and myself consented to cross over the country from the head of navigation to Salt Lake City, 360 miles. We found an excellent road for the entire distance. Twenty miles from the river we came to the first settlement. From that point to Salt Lake we passed through *forty-two cities and towns*, with a population of over 60,000 people. Agriculture here is certain, as the water for irrigating purposes is conveyed from the mountains to the valleys. Cotton is also raised, and cotton mills are in operation. The farmer has an excellent market for all he can raise among the miners, who are rapidly filling up Idaho, Utah, and Montana Territories.

At Salt Lake City the news of the success of this enterprise was particularly gratifying, as all felt the assurance of being able to obtain their freight from the Pacific coast at all seasons, at from one-third to one-half less cost than by any other route. Meetings were held in the city to give expression to the feelings of the community, and it was decided to have their emigration, amounting to about 20,000, come by way of the Colorado river.

A telegraphic line has been established to the head of navigation from Salt Lake City. Should the population increase in Utah, Idaho, and Montana, for the next year as rapidly as it has for the last twelve months, three important States will soon be formed out of them.

A number of merchants recently came to San Francisco from Utah and Montana to purchase goods; but such was the course taken then respecting the currency, that they were reluctantly compelled to finally make their purchases in New York. When it is remembered that more than 16,000,000 lbs. of merchandize were last year brought into Utah territory alone, over the arid and desolate plains which separate that territory from the Atlantic States, some conception may be formed of the benefits which would accrue by the diversion of this immense trade to San Francisco. This is but the beginning of the commerce of the region penetrated by the Colorado River. If the proper enterprise is manifested by the people of San Francisco, they can have the benefit of a trade second to that of no other city. This has been fully demonstrated by Capt. Truworthy, who has from the commencement of the enterprise labored against the most bitter and continued opposition on the Colorado river, and in San Francisco.

Arriving in this city from Salt Lake, after accomplishing so much for the benefit of the State and General Government, in opening up a way by which the latter can save three millions of dollars yearly, the hostility against Capt. Truworthy was again renewed; but under a different form from that which has already been referred to. Suits were instituted against him, to the end that he might be prevented from returning to the scene of his triumph, so that the combination company of this State, acting in concert with the old line, might have the same control over the Colorado that the former has on each of the navigable waters of California. Being fully aware of the expenses Capt. Truworthy had already incurred, and was incurring on the river, and having unlimited capital, the joint corporations expected, by the system they were inaugurating, to reap the benefit of his exertions, and to drive him from the field. Over five thousand dollars were due from the combination navigation company to Capt. Truworthy. This was refused, and continues to be refused to be paid; but the captain was informed that he could have his claim, provided he *did not* return to the Colorado river.

Here is the grand secret to the opposition, as carried into effect against the enterprise of navigating that river, from the time it was first undertaken until its successful consummation. This will explain why the most prominent men connected with the combination company, and the swarms of idlers who are influenced by it, and have been so active in preventing stock being subscribed to the new Pacific and Colorado Steam Navigation Company. It was not enough that Capt. Truworthy should be deprived of his just claim. The lumber owned by him at the mouth of the river was clandestinely carried away in his absence; the pumps and machinery of his vessel lying there, were taken and brought to San Francisco for sale, by one of the schooners connecting with the old line; his private letters were broken open, and their contents examined by persons occupying prominent positions in the community, and who, at the locality of their guilt, and by their influential friends in San Francisco, availed themselves of the knowledge thus obtained, to persecute and harrass an enterprising and deserving man, whose only offense consisted in coming to the aid of a struggling community, and in successfully navigating an important river,

These, Messrs. Editors, are but *a few* of the obstacles placed in the way of an enterprise which has, notwithstanding all this, resulted in complete success. I should not refer to these things thus publicly, did I not feel that it was a duty I owe to Capt. Truworthy (whom I succeeded in inducing to go to the Colorado over eighteen months since), that the facts should be laid before an honest and discriminating community. The contest of individual capital and enterprise, against the continued and unceasing efforts of two wealthy corporations, has been long and difficult. But success has resulted in the cause of Justice. The State of California and the city of San Francisco; will feel the benefits of this movement, so important to each from the difficulties under which they labor at the present time.

Cast your eyes, Messrs. Editors, over this State, and see the melancholy result which has been produced by a dangerous centralization of capital and power, as exhibited in the combination company of California: Steamers rotting at your wharves; towns hastening to decay; a thousand public pensioners sustained by the country, and exhausting the vitality of the Commonwealth; population leaving the country; capital seeking investment in other localities; manufactures receiving no impetus; the mineral resources of the State not one half developed; agriculture, the substrata of a nation's greatness, neglected and impoverished, whilst hundreds are rising to affluence in a single night by money taken from the honest masses of the community, who are but ill prepared to meet the constant drain which has been made upon them. The day will yet come when the oppressive capital which has almost ruined the State will be compelled to recognize the claims of the community; and that a combination company will find that by resorting to a deliberate conspiracy to prevent some, and to the bullet and the knife to strike down those who will not accede to their bribes or be intimidated by their threats, is adopting an alternative which will react upon themselves.

Let the facts go before the people, regarding the actions of those who have set at defiance the laws of the country and of humanity, and who have been so far emboldened as to treat the rights of the community as if they were but the titled dignitaries of the chess board. We live under a free government, where all are guaranteed the absolute rights of personal security and private property, and the combination company of California, and that of the old line, on the Colorado, may find to their regret that it is dangerous to trifle with the feelings of an outraged community.

I must close my remarks, feeling that I have already wearied your patience. The interest which has been manifested by the miners and others to know the facts in reference to the navigation of the Colorado, is the reason I have in this instance deviated from my purpose, which was to remain silent upon the subject matter of this communication, and to leave time to do justice to our connection with the successful navigation of the most important river running into the Pacific ocean.

Thanking you for the commendable interest you have manifested in this enterprise,

I am truly yours,

SAMUEL ADAMS.

A SINGULAR CASE OF TOOTH DISEASE.—Dr. Emory L. Willard, of La Porte, submitted to our inspection, a few days since, a singular monstrosity, which consisted of a tooth which he extracted in May, 1862, from the jaw of a Chinaman, in La Porte, Sierra county. Some eight years previous to the extraction, the Chinaman in question was seized with a violent tooth-ache, which resulted in inflammation and ulceration, and a final absorption, by the system of the diseased fang or root of the tooth. After this process had ceased, a disease of rare occurrence, but known in the books as *costosis*, set in. This disease consists of an effort of Nature to restore the absorbed root; but in this case Nature seems to have overexerted herself. Instead of stopping when she had restored the root to its original dimensions, she kept on with the work until the root had attained the enormous size of 1⅜ of an inch, one inch in width, and five-eighths in thickness, independent of the tooth itself. The disease had been of fourteen years' standing when Dr. Willard was called to the patient. All this time there were regular running fistulas opening through the cheek; having in the time created seven different points of opening at as many different periods of time. The tooth was removed by the excision of the jaw-bone, one-third of which was cut away in the operation. We have a photograph of this monstrosity upon our table, which the curious can examine at their leisure. A full report of this extraordinary case will be published in the next number of the San Francisco *Medical Journal and Press*, accompanied by an engraving.

A MAN has just taken out a patent, says an exchange, for luminous hats. They will, he says, preserve the wearers from being run over at night, and to some extent will prove a saving in the lighting of streets.

Arizona.

A month or two ago the friends of the Hon. R. C. McCormick, Secretary of the Territory of Arizona, gave him a sumptuous dinner at the Astor House, in New York. On the occasion the Hon. C. D. Poston, delegate from the Territory, made an eloquent speech, wherein he said:

Arizona is the classic land of pioneers, and has a history not inferior in interest to any portion of the American continent. The first pioneers of Arizona were, in the opinion of the illustrious Humboldt, Asiatics, and reached the land of Ophir by Behring's Straits. They have left monuments of their industry in Arizona marking their era with indubitable evidences of civilization.

A lonely citadel stands near the Pima village, in the midst of a desert, as the only milestone of time left to mark the passage of this race. The house has five stones yet remaining, and was surrounded by a city covering an area of some ten miles square, watered by canals from the Gila River. Of this race little or nothing is known. No historian has recorded their rise and fall. No poet has celebrated their deeds of love or arms. The old "Casa Grande" stands in solemn majesty, the sentinel of the desert, mourning for its lost children. The next pioneers were the proud Hidalgoes of old Spain, who bore the banner and the cross from Vera Cruz to San Francisco. Indomitable in war, and zealous in religion, they marched with the torch of civilization in one hand and the crop of faith in the other. They were noble men, and nobly did their work. The monuments of their devotion are spread from Cape Horn to Oregon. The first to enter Arizona was the renowned Cabezo de Vaca, who crossed the continent from the Savannah of Florida to the mountains of Arizona in 1538.

In this remote region they found villages of stone, inhabited by an intelligent race claiming European extraction. These are now called Moquis or Mokes, and inhabit northeastern Arizona.

The next pioneers were Americans. In the year 1824 a party of about 100 hardy and adventurous frontiersmen set out on a trapping expedition to the headwaters of the Arkansas river. After many romantic adventures in New Mexico, the party dispersed and a few of the boldest spirits undertook to reach the Pacific Ocean. * * *

In the year 1853 the Gadsden Treaty was made, by which we acquired that narrow strip of land which forms the southern district of Arizona. In their eagerness to secure a southern route for a railroad to the Pacific, the politicians of that day overlooked the substantial advantages to be gained by a port on the Gulf and outwitted by Mexican diplomacy, parted with $10,000,000 in hard gold without leaving us egress to the sea. With a port on the Gulf of California, the vivifying streams of commerce would soon vitalize Arizona, and extract from her virgin bosom wealth which it would seem fabulous to predict.

LIQUIDATION OF THE NATIONAL DEBT.—According to the official figures, the national indebtedness was reduced nearly thirteen million dollars in September, or at the rate of one hundred and fifty-six millions a year. Such an energetic process of liquidation would result in the discharge of all the national pecuniary obligations in about twenty years.

UNRELIABILITY OF GOVERNMENT AGENTS.—The cotton agents dispatched to the South, by all accounts, are a very enterprising set of officials. It is now thought that out of the 120,000 bales of Confederate cotton surrendered the Government will not get 10,000. The Secretary of the Treasury is reported to have recently remarked that he found it almost impossible to get suitable men to transact that sort of business.

THE Campo Seco Copper Mining company shipped from the mine, during the year 1865, 1,902,501 pounds of copper ore. The Taunton Copper Smelting company, whose works are located at Campo Seco, and have been in operation during the past three days only, have within that time shipped 193,605 pounds of copper regulus.

HOW HISTORY IS MADE.—The English publishing house of Rutledge & Sons have just issued a volume entitled "Men of the Time," in which, among other startling facts, the reader finds that General Sherman was compelled to abandon Atlanta, and fleeing eastward escaped to the sea.

SALES OF THE WEEK

BY THE S. F. STOCK & EXCHANGE BOARD.

Monday, January 15.

AFTERNOON SESSION.

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Just Issued—Mining and Scientific Press Book and Job Office.]

[*Continued from Page* 21.]

ON WAX WORK.

Committee:

P. MEZZARA, F. A. BUTMAN.

The display of wax work comprised some most excellent specimens of the art. The committee award to Mrs. E. V. Green, San Francisco, a first premium for a beautiful basket of wax flowers.

To Miss Mattie Love, San Francisco, who exhibited a small boquet, composed of one white camelia and violets, a second premium.

To Mrs. J. B. Harmstead, for fruits and shells, a first premium.

To Mrs. E. Piper, for a vase of flowers, honorable mention.

HAIR WORK, by Mrs. L. C. Baldwin, Marysville, one case hair work of beautiful designs and finish. Awarded a certificate of merit.

HAIR WORK, by Mrs. G. Cook, San Francisco, two cases hair jewelry; two frames hair work; one case shell work. The hair work and jewelry are most beautiful, disylaying good taste in design, and cxcellent workmanship. Awarded a first premium.

ON CONFECTIONERY AND CAKE.

Committee:

MRS. G. W. CONKLING, CHASE BORCHARD.

The committee award to Messrs. Dellwig & Bro., for best confectionery, a first premium.

Also to Messrs. Swain & Brown, for the best cake on exhibition, a first premium.

ON CARRIAGES, WAGONS, ETC.

Committee:

J. L. OTTIGNON, R. S. EELLS, H. W. BYINGTON, J. W. FARREN.

The exhibition of carriages and wagons of California manufacture was a very small one, and it was a matter of surprise to the Committee that so large a branch of mechanics should he so sparingly represented.

The quality of the specimens exhibited, however, was plainly superior to those of Eastern manufacture, of which quite a large number were in the Fair.

Track Sulkey, exhibited by H. M. Bernard, of Sacramento, was of good style and workmanship, and a credit to any establishment. Awardcd a second Premium.

Track Sulkey, exhibited by Alhert Folsom, of San Francisco, was of superior style and finish, well braced, extra strong wheels and beautifully painted. Awarded a first premium.

Doctor's Phæton, exhibited by George P. Kimhall & Co., San Francisco, has a great many conveniences for a doctor, such as pockets for medicines, instruments, etc. It is made to turn very short—which is a great convenience—and is a fine carriage for the use intended.

Pic-Nic Wagon, exhibited by George P. Kimball & Co. This vehicle has three seats, is covcred with cloth, and for accommodation, strength and utility for the purpose intended cannot he surpassed. For both the above, awarded a diploma.

Milk Wagon, by Stein, Link & Scherh, of San Francisco. The wood-work of this wagon is of good design, the wheels strong and well made, and the iron-work, painting and trimming of tho hest quality. For the purposo intended, tho vehicle is excellent. Awarded a diploma.

Side-Spring Top Buggy, hy Wm. Larkins, is gotten up in good style, and is well finisbed in every particular.

Open Side-Spring Buggies, hy Wm. Larkins, who exhihits two, possessing all the good qualities of the preceding vehicle. Awarded a special premium—silver medal.

Child's Wagon, hy E. C. Brooks. This wagon is of good stylo and workmanship. The hody is hnng on four levers, attached to four spiral springs, which is a novel invention.

Pulley Evener, hy William Saunders. This article is attached to a wagon-pole. The "evener" is about six feet long, with an iron pulley in the center, around which the chain plays to which the team is hitched. Not having had a practical test exhihited to them, the Committee presume that the "evener" is intended to prevent sudden jerks on the hreasts of horses, and they recommend teamsters to use it.

Car Couplings, hy E. T. Barlow, San Francisco. The coupling links are so arranged that, on two cars coming together, they will couple themselves without the aid of man, hy which a great number of accidents can he avoided.

Car Switch, hy E. T. Barlow, which does away with all friction, and is very simple and effective. The Committee commend these last two articles to the consideration of railroad companies throughout the State.

AGRICULTURAL IMPLEMENTS AND MACHINERY.

Committee:

DANIEL L. PERKINS, J. A. HOBART.

The Committee, after examination, award as follows:

Seed Sower and Cultivator—For broadcast sowing, hy D. & H. A. Winter.—Awarded a first premium.

Roller and Grain Drill, hy L. Sikes, Santa Clara.—Awarded a second premium.

Seymour & Morgan's Combined Mower and Reaper, hy J. D. Arthur & Son.—Certificate of merit. The same firm also made a fine exhihit of different kinds of plows.

Gang Plow, by L. Holloway, Gilroy, of superior workmanship.—Awarded a silver medal.

Portable Hay Press, hy M. Doanes.—Awarded a second premium.

Hay Press, by E. F. Mock, Petaluma. This is a rotary, folding hay press. The model shows much ingenuity, but the Committee were unable to decide upon the merits of the press from an examination of the model alone.—Awarded a diploma.

Convertible Gang Plow, with its attachments, by T. Mahers, Watsonville. This is an excellent machine.—Awarded a diploma.

Gang Plow with Seed Sower and Harrow Combined, by Baker & Hamilton, Sacramento. No ono being present to explain the machine, the Committee were unable to judge of its merits. This firm also exhihited two fine steel plows.

Feed Box (self-regulating) hy Benjamin E. Harris. This arrangement for feeding horses exhibits much ingenuity, and the committee would judge it of practical utility.

Hay and Straw Cutter, hy J. L. Chase. An excellent machine. No competition.

Grain Separator, by A. Hunter. The Committee have examined and experimented with this machine, and, finding it a valuahle one for the purpose claimed award a silver medal.

Mustard Cleaning Machine, by A. Hunter. The Committee bave experimented with this machine, and find it valuahle for the purpose intended.

Tree and Corn Cultivator, hy Andrew Barton, Oak Knoll, Napa County. The Committee have made a careful examination of the manner in which the machine performs its work, and are of the opinion that it will do all that is claimed for it. Mr. Barton has applied for a patent. In view of its excellence, it is awarded a diploma.

ON CIDER AND WINE PRESSES.

Committee:

WM. GUNN, C. F. JONES, WM. H. HOOPER.

Cider Press, hy John Denn, Sacramento. For being the most effective, combined with simplicity of construction, this press was awarded a first premium.

Cider Press, by E. W. Walton, Drytown.—Awarded a second premium.

Cider Press, by Joel Halstead, worthy of honorahle mention.

ON WASHING MACHINES AND WRINGERS.

Committee:

V. S. W. PARKHURST. C. F. JONES.

Four washing machincs were entered for exhibition, viz., the "Union," "Challenge," "Economy," nnd "Rotary." The committee, after careful trials of the different machines, are of the opinion that the "Economy," hy J. M. Horner & Co., can do more work, witb less power and with less wear and tear to the clothes than the others.—Awarded a first premium.

To the "Union" washing machine, by J. L. Chase, is awarded a certificate of merit.

ON CABINET WORK.

Committee:

JOHN WIGMORE. JOHN BRYANT.

Billiard Tables, exhibited by P. Liesenfelt. For beauty of design and excellence of construction and finish, the committee award a first premium.

Secretaries and Desks.—The committee award a first premium to Easton Bros., for secretaries exhibited hy them.

Secretaries and Desks.—A. Conrad exhibited secretaries which were awarded a second premium.

Manzanita Cabinet and Cane Case, hy J. M. Aitken. This cahinet and cane case, made of California wood, and exhibited for competition, were of most excellent workmanship. In view of the decided superiority of tbese articles, the committee awarded a special premium.

Barber's Chair, by Wm. M. Butler. For completeness of design and execntion, the committee awarded a special premium.

Furniture, by Goodwin & Co. Lots 552, 583, 640, 278, and 366, of Eastern manufacture, were of excellent quality.

Furniture, hy J. Pierce. The committee make special notice of lot 672, consisting of library suite, chamher do., and cahinet, all of black walnut, as being superior to all others of Eastern manufacture.

Sea Chest, hy Capt. Edgar Wakeman. In the opinion of the committee, this chest showed considerahle merit, as being the work of an amateur.

Willow Furniture, by Neuman Bros. To this exhibit, as being very handsome, and light, and tasteful in design, the committee awarded a certificate of honorahle mention.

Inlaid Picture and Table, by Lazarus Castignio. These articles were finely designed, and the inlaid portions of the same beautifully executed.

Bed Lounge, by Jules Rolland, San Francisco. One bed loungo. This lounge is of extension make, arranged to close up in a very neat and compact manner.—Awarded a certificato of merit.

ON BILLIARD TABLES.

Committee:

R. N. VAN BRUNT. PAUL MORONEY. J. B. GUTHRIE.

The committee examined the cusbions of the two billiard tables on exhibition, and report the cusbions of the one owned by J. Strahle to be entitled to the premium.

ON DENTAL CHAIRS.

Committee:

J. B. BEERS. H. J. PAINE. J. B. JOHNSON.

The only chair exhibited was one made hy Dr. Wm. M. Butler, of this city, which the committee tbink is well adapted to supply a great want in the profession. It is not only of superior workmanship and high finish, but, owing to an ingenious combination of mechanical appliances, a great diversity of movement is obtained. The working of the machinery is so easy that it requires hut little more than an effort of the will on the part of the operator to place the patient in any position needed. Attached to the chair is a very elegant spittoon, for dental use, which, heing halanced on a universal joint, always keeps a perpendicular position, notwithstanding the altering movements of the chair. Combined with this spittoon is an ingenious device for saving the waste filings and chippings of gold, which amonnt to a considerable sum per annum, especially where there is a large practice. As n California invention of great merit, awarded n silver medal.

ON UPHOLSTERY.

Committee:

J. O. ELDRIDGE. CHARLES C. VOLBERG. SAMUEL J. FLETCHER

To Messrs. Goodwin & Co., for unique and original reception chair, upholstered in brown silk reps, as heing the best domestic invention, and snperior in all respects, awarded a silver medal.

To Messrs. J. Pierce & Co., for skill in workmanship in upholstered articles exhibited, awarded a first premium.

Upholstery Goods, hy B. L. Soloman & Sons, San Francisco. This firm exhibited one glass case of upholstery goods, four chairs, and outside drapery. This collection of goods was of most superh style and quality.—Awarded a diploma.

ON LEATHER, HOSE, ETC.

Committee:

DAVID SCANNELL. JOHN C. AYRES. W. T. GARRATT.

Your committee report that they have examined the hose exhibited by M. M. Cook & Son. Being the only hose exhibited, the committee can make no comparison, hut the material of that examined was of the best quality, and it was made in a superior manner. It was subjected to a strain of 160 pounds per square inch, and, from its appearance, it would have withstood more strain without fear of ruptnre, Its superior merit as a home manufactured article, in the opinion of the committee, entitles it to the award of a silver medal.

Horse Collars, hy Wm. Trnmbull, San Francisco. A lot of horse collnrs of California manufacture. These collars are of exeellent workmanship and good material, and represent all the various styles and qualities used in California.—Awarded a certificate of merit.

Leather, hy Kirby & Co, Santa Cruz. This firm exhibited two rolls sole leather and nine sides assorted leather, of their own manufacture, which, for all the qualities that constitute a good article, have no equal in this market. This leather was tanned in Santa Cruz County.—Awarded a silver medal.

Benicia Cement, hy Wm. H. Martin, San Francisco. One harrel Benicia cement. This is a most excellent article of cement, considered equal, for all hydraulic purposes, to any imported.—Awarded a diploma.

Rosin and Turpentine, by Wm. G. Jones, San Francisco. Both the rosin and turpentine are of exeellent quality, and were made near Dogtown, Butte County. Awarded a diploma.

Neat's-foot Oil, manufactured by Geo. S. Dann, Pacific Glue Factory, and exhibited by Cameron, Whittier & Co., agents. This manufacture has been carried on by the above-named party for the last five years; capacity of works, 8000 gallons of oil per annum, and 10,000 pounds of glue per month, the greater portion of which is exported to New York, for sale there. The quality of the oil is most excellent, while the glue is said to sell in New York at profitable prices.—Awarded a diploma.

Glue, exhibited by E. Kunitz, per Cameron, Whittier & Co., agents. This glue was made by the exhibitor, in Santa Cruz county. Its quality is excellent, it being preferred to Eastern made by most consumers. The works have been in operation about three years; their capacity is about 2,000 pounds per month. The glue finds a ready sale in this market, and is furnished at prices lower than a similar article can be imported.—Awarded a diploma.

WATCHES AND MATHEMATICAL INSTRUMENTS.

Committee:

WM. H. KNOWLTON, JAMES ANDERSON, B. R. NORTON.

The exhibition in this department, though not extensive, was still very interesting, the specimens showing a high degree of skillful workmanship and, in mechanism, an accuracy of detail that would do credit to older cities with larger population. Considering the recent settlement of California, and the drawbacks which those engaged in the finer arts and sciences labor under from the difficulty of getting proper materials, high cost of living, etc., the progress shown by this exhibition should be a matter of honest pride to our people. Judging from the success of this and other kindred departments, requiring the finest mechanical skill and ingenuity, the day is not far distant when we may depend upon our own resources in these particulars.

Watch by A. F. Mitchell. This watch, made in San Francisco, the committee examined with care, and found it to be a very creditable specimen of fine workmanship, showing a high order of mechanical skill. The committee deem the same worthy of a silver medal.

Surveyor's Compass and Transit, by John Roach. On examination, the committee found those instruments—made in San Francisco—very accurate in construction, displaying a high degree of excellence in workmanship and finish, and equal in all respects to any imported. The committee deem the same worthy of a silver medal.

ON ALBUM STEREOSCOPES.

Committee:

AUGUSTINE SNOW. W. BAUSMAN. H. C. BENNETT.

The only album stereoscope, or other instrument designed to answer the same purpose, on exhibition at the Fair, was that invented and exhibited by Mr. F. E. Mills. The instrument is designed to illustrate photograph albums, and in the opinion of the committee, is superior to any other used. It has what the inventor terms a "chromium," which consists of a glass prepared for the purpose of giving a life-like tint to the objects seen, instead of the usual ghastly hue produced by the ordinary stereoscopic instrument. As a California invention of great merit, it is awarded a silver medal.

ON GOLD PENS.

Committee:

WM. G. DOOLITTLE, R. N. VAN BRUNT.

The Committee report that, after a careful examination of the gold pens exhibited by Messrs. Kenney and Goldman, they award those of Mr. Kenney, as being the best, a premium.

ON ELECTROPTYPING AND SILVER PLATING.

Committee:

JAMES MACKIN, O. B. OAKLEY, WM. H. T. CLARK.

The Committee in this department of the Exhibition report as follows:

R. F. Rocchellicoli, San Francisco, had on exhibition a large quantity of electrotype plates and solid dies, for stamping leather, etc., and a beautiful silver plated figure of Flora supporting a lamp. Mr. Rocchellicoli also had on exhibition German silver window and fender bars, of his own manufacture, which compared favorably with Eastern work.—Awarded a silver medal.

John Martel, San Francisco, exhibited some fine specimens of California manufactured plated wares, which were awarded a first premium.

Marwedel & Otto, San Francisco, exhibited a case of fine imported hardware of good workmanship. Also, electro-plated bell-levers and door-handles, of California workmanship.

Wm. P. Harrison, San Francisco, exhibited a very fine case of electrotyped printing plates, manufactured in this city, which articles deserve honorable mention.

Greaves & Smith, San Francisco, exhibited an improved soda fountain, manufactured by themselves. This machine appeared to be of excellent copper workmanship, and is apparently, what the manufacturers claim it to be, an improvement upon any soda fountain now in use.—Awarded a diploma.

ON CUTLERY.

Committee:

HENRY WHEELER, W. J. LELAND, A. W. REAY,
J. WEICKHART, F. A. HOLMAN, M. D.

The display of cutlery in this part of the exhibition, was very fine. The competition, however, being between Messrs. Will & Fink and M. Price, both of whom presented cutlery of California manufacture, of superior excellence and finish. The Committee award to Messrs. Will & Fink, San Francisco, for best exhibit of California made cutlery, a first premium.

To M. Price, San Francisco, for fine exhibit of California made cutlery, a second premium.

ABDOMINAL SUPPORTERS.

Committee:

WM. CARMAN, M. D., WASHINGTON AYRES, M. D.

The Committee on ladies' abdominal supporters, chest expanders and improved shoulders braces, report that although they are constrained to make the first award to the articles exhibited by Mrs. I. J. Howard, for their superior general advantages and adaptability to the purposes claimed, yet they would call attention to the specific qualities of lightness, superior mechanism and admirable adaptability of those exhibited by Mrs. Read.

Concealed Door Spring, exhibited by B. F. Barker, San Francisco. This invention appears to be a great improvement on the ordinary door springs, and their peculiar construction gives steadiness and strength to the door in closing.—Awarded a diploma.

ON DENTISTRY AND DENTAL INSTRUMENTS.

Committee:

J. B. BEERS. H. J. PAINE. GEO. F. BENNETT.

The committee report the following as the result of their labors and awards:

On Dentistry.—To Drs. Knowles & Clarke, for the best set of artificial teeth, vulcanized upon a gold base; also, for the best set of artificial teeth made upon English vulcanized rubber, a silver medal.

On Dentistry.—To Dr. H. H. Thrall, for the best set of artificial teeth, made upon American vulcanized rubber, a first premium.

On Dentistry.—To Dr. Wm. Calvert, for some very fine samples of artificial teeth, of his own manufacture, which the committee, having used them in their own practice, believe to be equal to Eastern make, or the imported article; also, for samples of corrundum wheels, tape, &c., manufactured by himself for dental purposes, a silver medal.

A number of samples of teeth, soldered upon a gold base, were exhibited by divers parties, some of them highly finished and creditable specimens of the art; but those of merit the committee were satisfied were not wholly executed either in the laboratory of the exhibitors, or under their immediate supervision, thus giving no personal evidence either of professional skill or workmanship to the committee, who, therefore, do not feel justified in deciding upon their merits.

Extracting Teeth without pain.—To Dr. Edward Belle, for an ingenious apparatus for the application of cold to the teeth and gums, during the process of extraction, benumbing the nerves and periostium, so as to render the removal of teeth painless. The committee have witnessed the practical application of this process, and believe the machine an excellent one for the purpose designed, in all cases where it can be properly applied. They, therefore, recommend it as worthy of consideration.—Awarded a diploma.

ON GLASS MANUFACTURES.

White Flint Glass Ware, by the San Francisco Glass Works. One stand of fancy articles, in glass, of California manufacture. This company manufactures white flint glass ware only, and, from the excellence and cheapness of their wares, bid fair, in time, to drive out all foreign competition. This is the second glass company established on the Pacific coast, the other being the Pacific Glass Works' Company, at the Potrero, which confines its manufactures mostly to green and black glass ware, which it produces in large quantities. The San Francisco Glass Works have been in operation only a short time, during which, however, they have manufactured a great variety of white glass ware, of excellent quality.—Awarded a silver medal.

Ground and Cut Glass, by John Mallon & Co., San Francisco. One lot ground and cut glass. These specimens were of beautiful design and fine workmanship, and not to be excelled by anything of the kind ever imported.—Awarded a silver medal.

ON MUSICAL INSTRUMENTS.

Committee:

GEO. S. EVANS. J. K. KENDALL. JOHN L. CLARK.
GEORGE KOPPITZ. J. W. J. PIERSON.

The display of musical Instruments was a very fine one, that portion of Californin manufacture comparing favorably with the best imported. For a new country, scarcely fifteen years a State, the exhibition of her progress in the fine arts of civilization and population, as shown by this portion of the Fair, is worthy of great praise. This is more apparent when we consider the volatile character of her people, and the high price of skilled labor necessary in the manufacture of musical instruments, and the competition natural with those manufactured and imported from the Eastern States and Europe. As a general rule, articles manufactured in California have to be of surpassing excellence to compete successfully with imported articles, at a similar price. The case of musical instruments is no exception to the general rule.

Flutes, by George Pfaff, San Francisco, who exhibited a case containing a variety of flutes, of his own manufacture. These flutes were superior in tone and workmanship to any exhibited before. In addition to the usual keys and openings in imported flutes, Mr. Pfaff has added several others, which improves them to a considerable extent, as they enable the player to execute with greater ease than heretofore, very difficult passages, keys, and shakes. The instruments of Mr. Pfaff are bored in a more perfect manner, which also improves the sound.—Awarded a diploma.

Pianos, by Jacob Zech, San Francisco. The pianos of Mr. Zech were, in tone, action, and finish, considered superior to any exhibited before. These pianos, among other changes, have an improvement in the sounding-board, which adds greatly to the sweetness and volume of tone. There being no competition of California made pianos with those of Mr. Zech, the rules forbid award of a premium. In view, however, of their excellence of tone and finish, as compared with the other Pianos exhibited, the committee award to Mr. Zech a gold medal.

Square Pianos, of Wm. B. Bradbury's make, New York, exhibited by A. Kohler, agent, San Francisco, were the best imported pianos of their kind exhibited.—Awarded a first premium.

Grand Pianos, by Badger & Lindenberger, San Francisco. Chickering, of Boston, exhibited a very fine piano of this variety. Mr. Chickering was the only exhibitor of grand pianos.—Awarded a diploma.

Melodeons and Cabinet Organs, by Mason & Hamlin, exhibited by A. Kohler, agent.—Awarded a first premium.

Accordeons, of Californin manufacture, exhibited by C. C. Keene, San Francisco. These instruments were manufactured by himself, and were superior to the imported. Awarded a first premium.

ON HAIR PREPARATIONS, DERTRIFICE, ETC.

Committee:

DR. L. LANSZWEERT, ROYAL FISK.

The great variety of the articles exhibited in this department of the Fair renders it almost impossible for the Committee to report at length on the merits claimed for the different articles by their exhibitors. They are, therefore, briefly mentioned, and those noticed beyond a simple enumeration in all cases have peculiar merits which, in the opinion of the Committee, entitle them to that distinction.

Hair Rejuvenator.—Samples exhibited by A. Grimm.—Awarded a diploma.

Perfumery.—Sample exhibited by T. W. Van Zandt. Also, by J. F. Fugazi, who exhibited a very large and fine assortment of his own manufacture. The cologne water, hair restorative, philocome, marrow pomade and hair dye were of most excellent quality, and, in the opinion of the Committee, equal, if not superior, to imported articles. Analyses made by the Committee show the ingredients in the hair restorative to be of a harmless nature, while the testimonials of respectable parties who have used the article, bear witness to its good effects.—Awarded a silver medal.

Spring Flower Dentrifice.—Samples exhibited by T. A. W. Lundborg. This article, on analysis by the Committee, showed no injurious but many valuable ingredients for the purpose intended. In the opinion of the Committee, this preparation surpasses any known article of dentrifice in this market, and they would recommend it accordingly.—Awarded a silver medal.

Cream of Tartar in Crystals.—Samples exhibited by E. Vache, Los Angeles. This article was of most excellent quality, but the exhibitor would have promoted his interests by exhibiting samples prepared for family use, with a description of its manufacture and cost, and the practicability of competing with the imported article. As the consumption of this article is very large in this State, it is much to be regretted that information so important and interesting to the people was not furnished.

Yeast Powders.—Samples of Curtis' yeast powders exhibited by F. Williams. As this was the only sample of yeast powders on exhibition, the Committee were not able to test its merits by comparison with others. The Committee, however, were of the opinion that the article exhibited would, on trial, stand well for preference.—Awarded a diploma.

Preserved Milk.—Samples exhibited by A. Besson. This article was, in the opinion of the Committee, superior to any imported, both for freshness and delicacy of flavor, the latter being very difficult to retain through the usual process of manufacture. Although the only article of its kind on exhibition, the Committee would, in view of its excellence and purity (as per analysis), recommend it for premium.—Awarded a silver medal.

Prepared Mustard.—Samples of German and French mustard exhibited by Zwick and Loeven. In the opinion of the Committee, these samples of mustard—the "Dusseldorfer" and the "Moutard de Bordeaux," are well prepared, the latter, apparently, being somewhat weaker than the imported article.

Warren's Lustrina, sample of this article exhibited by C. F. Boshen. This preparation, intended for cleaning and polishing cutlery, tin, Britannia ware, etc., was tested by the Committee, who found the article well adapted, as claimed, but, by a finer pulverization of some of the ingredients the quality would be improved.

Mining Summary.

CALIFORNIA.

SHASTA.—A correspondent of the Sacramento *Union* speaks as follows of the quartz mining prospects of Shasta county: With a thorough acquaintance and experience in placer mining for fifteen years, in all its various branches, and backed generally with success, and with as full experience in prospecting, not working, quartz as any one, having had more or less to do with quartz in most of the southern and some of the middle counties, having been north, long in Washoe, and now here, and I believe further developments, not long distant, will bear me out in the assertion that nowhere have I seen any locality offering more flattering inducements than this vicinity for the investment of capital, whether you look to the character, extent and richness of the surface placer mines; to the result of mills now in operation here, above all other places, are the majority of ledges heavily charged with the different characters of gold-bearing sulphates, and wherein iron is a principal ingredient, in all imaginable combinations; to such an extent do sulphates prevail, in many instances as to be the predominant material in weight and bulk; thus, at the very outset requiring a character of machinery and process for working, with corresponding means and experience, far above the capacity of miners hereabouts, and will continue an insuperable barrier to the development of mines that, with proper appliances and judicious management, would annually yield millions.

"The old Jollie lode, now owned and worked by a company of practical English miners, at Muletown, with an old worn-out, rickety 4-stamp mill, with overshot water-wheel, — a vein from eight to fifteen inches thick, with very hard wall rock at the depth of forty-five or fifty feet, costing $12 to $15 per ton for quarrying—is, with no way of working sulphates at all, and only copper plates for saving free gold (whilst the sulphates, which are very rich, constitute three-fourths of the body of the lode,) yielding from $60 to $80 per ton, and has yielded for all work done, over $50 per ton, free gold, up to this time, and is improving as developed.

The Highland Company's mill, near the head of Dutch Gulch, two miles from French Gulch, running eight stamps, is steadily yielding from $30 to $200 per ton. The Washington Company's mill, on French Gulch, old and favorably known, is taking out very rich ore again. The Baker Company, on the east fork of Clear Creek, is taking out fabulously rich ore, and crushing, with hand mortar, $100 to the pound. The Honeycomb Company's mill, hydraulic power, on Hurdy-Gurdyville, is crushing, near the head of French Gulch, fine looking rock. Result not yet heard.

Near Old Diggings, for two years past a Mexican has been constantly engaged pounding rock, has just erected an arastra, has been and is supporting thereby a large family from a large and well developed vein. Kelly & Co., just completing a mill at Lower Springs, a few days since obtained from scrapings in the bottom of the shaft in their lode, four dollars to the pan, while in every direction daily new discoveries of rich croppings are being made by miners who are without means to test them by either work or machinery. Where there is one so called mill there should be fifty."

The *Courier* says that Mr. Rudolph Diotz is building a mill on Mill Creek, which, when completed, will be a source of profit to the owners and citizens of the county, as well as something to be proud of. The building is 40 by 125 feet, one story high.

PLUMAS.—A correspondent of the Quincy *Union* gives the following detail of mining operations at Sawpit Flat:

THE COMET COMPANY.—This company has probably expended $15,000 in running a tunnel along the south line of the claims, and suspended operations nearly a year ago. The claims, of course, are not prospected, and, what is still worse, probably never will be while owned by the present company.

EAGLE COMPANY.—The Eagle Company has a fine large dump shed, and is nicely situated for work. About $12,000 has been expended in a tunnel and other improvements, and this is its first year in the channel. The company is working sixteen hands. The gravel prospects well, and next spring we may expect to hear good tidings from the Eagle.

FRANKLIN COMPANY.—This company took out last year $35,000 and it is expected to do as well, if not better, this year. The company employs thirteen hands—four of these are employed in driving the main tunnel back to see what old dame nature has hidden away in the back part of this old banking house. Two channels have been found in every claim at Sawpit Flat—the first or outside channel is unprospected; the second is good, and the Franklin is driving back in search of a third channel with many reasons to hope for success.

UNION COMPANY.—This company took out last year nearly $40,000—and it is expected the proceeds of these claims this year, will not fall below the figures of last year. The tunnel and improvements have not been made probably for less than $15,000. Sixteen hands are employed in the claims.

NEW YORK COMPANY.—The tunnel and improvements have cost about $12,000. The tunnel was commenced about eighteen months ago, and is now in the channel. The claims will be opened and in a fair way for taking out gravel, probably in two months from now. There is no doubt but these claims will give a good account of themselves next spring. With the New York ends our catalogue of Sawpit Flat mining claims.

CALAVERAS.—The Copperopolis *Courier* of a late date speaks as follows of the mining interests of this county:

Within the past few months numerous quartz leads have been discovered in different parts of this county, and the work of prospecting has been carried on in the most lively manner. At Murphy's, Angels, French Camp, San Domingo, San Andreas, Vallecito, West Point, Campo Seco, Copperopolis, and other places, leads of promise have been discovered and are now being prospected with vigor. At Angels an unusual interest is being felt in the mines. Several companies are extracting rock for the mills now in operation (four in number), while numerous private parties in that place and vicinity are quietly working their respective claims. At Carson Hill rich developments have recently been made. Also in Salt Spring Valley. It is said that the new mill at Angels is a paying institution, the rock from the claim on which it is situated averaging about eighty dollars to the ton. Many of the claims in the vicinity of French Gulch seem to possess more than ordinary merit. They are small, but make up in richness what they lack in size. Moreover, the cost of developing them is comparatively small, the formation through which they run being soft slate. The Hardy lead is one foot in thickness at a depth of twenty five feet, and is becoming wider as the shaft descends; but if the lead is no wider at a greater depth, it is to be hoped it will be equally as rich as it is known to be nearer the surface. A foot lead in soft slate, yielding from fifty to one hundred dollars to the ton, is valuable property. In a few years Calaveras county will be numbered among the first quartz mining counties in the State. Indeed, we shall not be surprised if it take the lead.

TUOLUMNE.—The following quartz mills are reported for the First Assessment District of Tuolumne county:

Soulsby Mill; run by steam or water; 20 stamps, 4 pans; 40 horse power.

Independence Mill; steam; 10 stamps; 25 horse power.

Confidence Mill; steam; 10 stamps, 3 arastras; 20 horse power.

Bay State Mill; steam; 5 stamps; 25 horse power.

Green's Mill; steam; 5 stamps and amalgamator; 8 horse power.

Wheeler & Thayer's Mill; 10 stamps, 2 pans; 20 horse power.

Laurel Hill Mill; 10 stamps, 2 pans; 20 horse power.

Larco Mill; 10 stamps, 2 pans; 20 horse power.

Pirate Mill; 10 stamps, 2 arastras; 25 horse power.

Grizzly Mill; 10 stamps, 2 pans; 25 horse power.

Eureka Mining Company's Mill; 20 stamps, 3 pans; 40 horse power.

Gilson Mill; 10 stamps, 1 arastra; 20 horse power.

Excelsior Mill; 10 stamps; 20 horse power.

Monitor Mill; 10 stamps, 3 pans; 20 horse power.

Tuolumne Mountain Gold and Silver Mining Company, (Buchanan Mill); 10 stamps, 20 horse power.

Dr. Walker's Mill; 2 stamps; 5 horse power.

Robert Cash, smelting works for extracting gold, (oven, battery, etc).

MARIPOSA.—The Mariposa *Free Press* says: Reports from the Hamilton district concerning copper prospects still continue to be favorable. Several thousand pounds of the metal have been smelted during the last two weeks at the works ready for shipment. Quite a little town is springing up in the locality of these works at James' Ranch, which may eventually rival Copperopolis.

HUMBOLDT.

We learn from the *Register* that the Montezuma mine is looking as well as ever, and the deep work will soon be resumed. Meantime, the drifters are taking out ore which yields remarkably well under mill process. Sterling is getting material together for the cement furnaces.

The Webber mill, which has been removed from Arabia, Trinity District, and erected on the Humboldt river, lately turned out sixty pounds of bullion. The old mill built by John C. Fall is being run by M. Torrey, and is now working rock from the Manitewoc mine. Holt's mill, in Winnemuck District, about twenty-five miles north of Dunn Glenn, is completed, and will start up in a few days. The Jersey, Montezuma and Dasey claims, in Trinity District, are taking out rock.

The Jersey mine is now second to none in the county. The Atchisons are putting shafts down at an unprecedented rate. Twelve men constantly at work. In the perpendicular shaft, above the line of the Dunderberg incline, at a depth of sixty-five feet, they have struck the ledge, and have at that point a body of fine ore three feet in width. The tunnel (taking the ledge endwise) is ninety feet in; the inclines (following the ledge down at different points) are kept on with—one being now 108 feet and the other 120 feet down. This may be called prospecting a ledge to some purpose.

NEVADA.

The following figures are taken from the reports of the several Assessors of the counties indicated in the State of Nevada:

The Assessor of Humboldt says his county has produced $100,000 of bullion during the year ending September 30th. The total yield of the Sheba mine is reported at $70,000, the ore averaging $140 per ton. The Assessor of Lander county, which includes the Reese River region, says that during the last six months 36,000 tons of ore have been reduced in his county, at an average cost of $75 per ton, and 10,000 tons have been taken out and laid by, to be reduced when the expense will not exceed $50. The number of miners is estimated at $1,000. The county has three water-power quartz mills with thirty stamps in all; and sixteen steam quartz mills with 133 stamps. The Surveyor and Assessor of Nye county, make a joint report in which they state that there are four quartz mills in operation in the county, and four are being built, one at the Murphy mine, Twin River District, to have forty stamps, and to cost $150,000. The number of miners is estimated at 500; the total product of bullion at $100,000. The cash working capital introduced within a year, is reported at $1,000,000.

JUSTIS MINE.—The Justis mine is said to be yielding a large amount of excellent ore at the present time. It is stated that 800 tons per month, that will work from $40 to $50 per ton, can be extracted.

ESMERALDA.

John S. Mayhugh, Esq., furnishes the Virginia *Enterprise* with the following facts with regard to the mines of Bodie District:

The Isabel shaft has now reached to the depth of 176 feet, at which point the vein is found to be five feet wide.

The Osceola is now down to the distance of 216 feet, commencing on the surface with a ledge only ten inches thick, but at the bottom of the shaft the vein has increased to from five and a half to six feet in thickness.

The New Mexico is 104 feet deep from the surface, with a splendid lode in view of some four feet thick.

I will here remark that all the ledges in this district are decomposed, and these outcroppings do not show more than six or eight inches of a ledge.

They have struck rich ore in the Mary Ellen Ledge, at a depth of 200 feet.

Bunker Hill is down upon the ledge 130 feet.

The Magnet 120 feet, with a vein of pay ore at least three feet thick.

Rockaway, fifty feet deep, has just struck good ore.

In the New Mexico upper shaft, known as No. 2, the depth of 180 feet has been reached, from which point there is now being taken some of the richest ore that I have ever seen in this section of the country.

Osceola No. 2 is now excavated to the depth of 123 feet, in the bottom of which is found a very fine ledge of pay ore some four feet in thickness.

The Tioga is down about 100 feet and opens out a splendid ledge.

The New Mexico Tunnel has now reached the distance of 356 feet to the southwest through the main body of the hill, the end of which is 256 feet perpendicular from the surface.

The Tioga Tunnel is 265 feet into the bluff, and from the surface 222 feet.

The Isabel Tunnel is located on the north side of the bluff, and has now penetrated to the distance of 386 feet, and in its course through the hill has passed through some four fine-looking ledges of two and a half to four feet thick. When this tunnel shall have reached to the distance of 700 feet it will have cut through the lodes of several of the most important companies at nearly right angles, and at an average depth from the surface of 500 feet.

The mines in this district have several advantages not usually found connected with the working of silver ores on the eastern slope. First, plenty of clear and pure water. Second, the ore is all, or nearly so, decomposed, and thirty tons can be crushed with more ease, and in less time, and with less wear and tear to a mill than twenty or twenty-five tons of the average rock of Virginia or Esmeralda, which is, to some extent, hard and flinty—at least it has been the experience of our Esmeralda mill men, who have crushed from both districts, Bodie and Esmeralda.

Third and last and most important, is the easy access to an inexhaustible amount of the finest timber for both building and fuel purposes at the foot of the Sierra Nevada mountains, at a distance of about eighteen or twenty miles.

The immense amount of ore that can be taken from these mines will require at least two additional mills, of thirty stamps each.

The Empire Company's mill, that has been erected during the past summer, is situated at the northeast base of the bluff, in the valley leading from Bodie to Aurora, and about 700 feet below their mines. The inside machinery of the mill are sixteen heavy stamps, eight Wheeler pans, three separators, four copper shaking-tables (one to each battery of four stamps), four copper concentrators, twelve vats for pulp—capacity of seven tons each.

The mill crushes ten tons per day, which is all that the pans can amalgamate, but with an increased number of pans (which it is the intention of the company to put in), the capacity of the mill will be thirty tons per day.

The mill is now yielding from $12,000 to $15,000 per month, and the mining and milling of the ore costs $10 per ton, and is supplied from one ledge only—the Osceola; the ore from this ledge costs about $1 75 per ton for mining, and there is enough of ore, by cubic measurement, in sight, above the 100-foot level, to run the present mill one year without any further developments. Thirteen men are employed in the mill.

REESE RIVER.

We condense from the Reese River *Reveille* as follows: We learn that new and important discoveries of mineral ground have recently been made south of Silver Peak District. The character of the ledges—which rumor pronounces very rich—and their precise locality have not yet transpired, but we hope to be able to furnish the particulars in a few days.

An instance of successful work is recorded, in the case of a lot of very rebellious ore taken from the Stephen A. Douglas mine and worked at the Midas mill. The bullion was 960 fine, and exceeded 80 per cent. of the assay value of the ore. The Douglas ore has long been considered as among the most rebellious in the district and is nearly similar to the ore of the Providential. It is gratifying to know that our most refractory ores can be made to yield such fine bullion, and that they only require to be treated in a proper and skillful manner.

The Providential is situated on Lander Hill, and is being furnished with powerful hoisting apparatus. The Providential exhibits one of the largest and most promising veins on the hill, and has suffered severely for lack of this mechanical force to develop its character.

The Tesoro mine has lately been worked with great energy, and is now nearly 100 feet deep. The vein has been penetrated four feet without cutting through it. The ore seems to be of good character.

The Drummond Ledge is located 200 yards north of the Empire mill building in Yankee Blade Ravine. It is a very large claim, embracing 2,000 feet. An incline follows the course of the vein to the depth of thirty-two feet, exhibiting a handsome ledge fifteen inches thick, holding several strata of very rich chloride ore. For the amount of labor expended on the claim the owners are warranted in believing it one of the most promising mines in the Yankee Blade basin.

The Winchell mine is situated about 400 yards north of Yankee Blade Ravine, and about half a mile from the Metacomet ledge in the adjoining district of Amador. It is believed to be an extension of the Metacomet. A shaft has been sunk on the ledge to the depth of twenty-three feet, developing a ledge fully five feet thick. Although the ore obtained from the vein does not yield high assays of silver, nor would it pay the present cost of reduction in a custom mill, it is believed that when greater depth has been attained, it will prove a valuable property. The Winchell belongs to the Austin Silver Mining Company, and is attached to the Colfax mill.

Some rich ore has recently been taken out of the Girard, under charge of Mr. Joseph O'Neil. The old good repute of this claim is well borne out by the recent developments. At a depth of eighty feet the vein is found to be near two feet in thickness and bearing a fine quality of ore. It will probably require a depth of 200 feet to reach the sulphuret ore, but from the evidences shown by the richness and size of the vein, the sulphurets will prove abundant and valuable when found.

Mechanical.

A NEW SUBSTITUTE FOR IRON AND WOOD.

Prof. A. L. Fleary, in one of his interesting letters to the Pittsburg *Oil News and Manufacturing Journal*, gives quite a full description of a recent invention of a substance known as Zopissa paperboard, which, he states, is now being extensively introduced in England as a substitute for many purposes for wood and iron. The invention was made by Col. N. C. Szczerelmey, a Hungarian gentleman, residing in London. The following description, compiled from the Professor's letter, will be read with interest as giving some idea of the usefulness and value of this invention:

The Zopissa paperboards and pipes are made of a material manufactured from fibrous substances, and saturated with the Zopissa compound only, without the slightest admixture of any bituminous matter. They are therefore not to be confounded with pipes made of bituminous paper.

The material is of a most remarkable character, its specific gravity compared to iron is as one to six and a half or thereabouts, depending on the mode of its manufacture; it is slightly greater than the specific gravity of wood (English oak,) but the Zopissa board is much stronger than any description of wood. A test with Zopissa board of one inch in thickness against oak planks of the same width and length, but six inches thick, has shown that where the one inch Zopissa boards have deflected half an inch, the six inch oak planks have been thoroughly broken.

When fired at with a Whitworth rifle it has been found that the resistance to penetration of two inches of this board is proved to be greater than that of ten inches of solid oak.

The Zopissa boards are perfectly waterproof or non-absorbent, and practically indestructible, for neither animal, nor vegetable matter can adhere to their surface. The material is a non-conductor of heat, cold or electricity, and perfectly non-inflammable, no amount of heat can set it in a flame.

When prepared in sheets, which can be made 100 feet long or upwards, and of any breadth and thickness, this material is eminently adapted for ship and boat building, the lining or covering of ships, for backing armor plated vessels; for the construction of water tanks; for portable houses; for roofing and flooring; for railway and private carriage building; for many descriptions of furniture; for the soles of boots and shoes, for *oil* and *water tanks*, petroleum barrels, hogsheads, casks, boxes, etc., etc.

The Zopissa boards are readily fixed to the framework of vessels, and do not require sheathing with copper or other metal, for they are never fouled. The heaviest shot going through vessels constructed of this material will make only a clear, round hole, without splintering, which is the cause of the destruction of life in vessels of war, (the same can be said to happen in the railroad collisions,) the damaged portion can at once be plugged and rendered perfectly secure.

If such a vessel strikes upon a rock, there will be no shattering of timbers, as with a wooden vessel, or complete destruction as is often the case with iron ones, owing to the inability to immediately repair the damaged portion.

When used as a lining for iron ships, the Zopissa board entirely prevents the unpleasant and unhealthy effect of sweating, always to be found in such vessels.

So fully alive are the English government and the shipping interest to this invention and its important advantages, that large offers have been made to the patentee for the right to apply the material for this purpose only.

For the construction of railway carriages an immense field is open for the application of the Zopissa board, and orders are already promised for many years to come. When this material is used, a carriage is obtained combining the maximum of strength with the minimum of weight and cost, and the most beautiful polished surface can be given to the exterior of such carriages.

THE ZOPISSA PIPES.

In addition to the multifarious uses to which the Zopissa sheets are suited, the Zopissa pipes are peculiarly applicable for the transmission of water, gas, sewerage, oil, and other liquids, also for underground telegraph purposes, for speaking tubes and a vast variety of other uses. The Zopissa pipes are considerably stronger, (compared by weight) much cheaper, and remarkably light as compared with iron pipes. Water passing through them will remain perfectly pure and cannot freeze in the severest frost, therefore, pipes of this material are not liable to burst. To prove the latter statement the Zopissa pipes have been tested in Russia for a whole winter without being affected in the smallest degree.

The Zopissa pipes will bear a pressure of 260 pounds to the square inch, and can be made of greater strength if required.

WHAT IS ZOPISSA?

The *Zopissa* is a substance coming from the East Indies, and possesses the peculiar properties given to the fibrous materials. If we look around in nature we find many curious properties due to the admixture of certain substances, the strength of the fibre in certain qualities of wood, the stiffness of straw, the tenacity of the vine, the indestructibility of the human hair, the hardness of the covering, and the compactness of the tooth, and many other instances, show that we have yet many things to learn. The preservation of the monuments of antiquity in Eastern cities, in Egypt, in the East Indies and others, have led Col. Szerelmey to the employment of what is now known as Zopissa, a peculiar gum used by the ancients for the preservation of wood and cloths.

The Papier Mache of the Chinese and Japanese has never yet been equalized or superseded by any of the European or American manufacturers, and from the above given extracts from English publications, we can see that our neighbors over the water begin to show that they are not remaining behind in the general progress.

ITS USE AS AN INSULATOR.

The following extract from the London *Times* September 1st of the present year, foreshadows another important improvement: "But what strikes us most at the present time," says the journal, "just after a second failure to establish telegraphic communication with America, is the confident assertion of Colonel Szerelmey's friends, well known in several circles, that by the use of this Zopissa paper alone, of all the materials at present known, can a perfect electric cable be formed. We were shown a rope of less than an inch in diameter, with an ordinary copper wire projecting at each end through the center. This rope was formed neither of hemp, india-rubber, gutta percha, cork shavings, nor any ordinary recommended covering, but simply of Zopissa paper. It is almost impossible that it can break; it will not stretch, and thus throw the strain on the copper wire, although it is perfectly flexible. Lastly, it has been reported by some of the most skilled electricians of the day as being perfect in insulation and other respects. Now, if anything like what we have heard as to the practicability of this discovery and its application to so many of the purposes of life, its cheapness, its durability, *its comparative safety from fire*, etc., be feasible, it is high time that the public took pains to be thoroughly informed on the subject."

MECHANICS' WAGES are advancing in England. The cabinet-makers in London lately demanded an advance of ten per cent. on all kinds of work, and received it. Wages are also advancing all through the iron districts. This is one of the expected and legitimate results of the great revolution movement recently set on foot in the Eastern States for the procurement of skilled labor from Europe. The policy heretofore adopted of building up manufacturing enterprises in this country which can compete with the pauper labor of Europe, by a system of protective duties, is to be, in a great measure, abandoned; and the same end is to be gained by drawing off the skilled labor of England to this country, by the offer of high wages and the facilities of emigration, until the English manufacturer shall be compelled, by the very scarcity of labor, to raise the price of wages to a standard so near to our own, as to place the two countries on equality of footing in that particular. It is not proposed to *degrade* the American operative to the condition of a mere toiling animal; but rather to *elevate* the European laborer to the American level—to a position in which his toil will secure for him the means of a decent and comfortable living. The enterprise is likely to succeed, too; and not only America but Europe, also—the great producing classes of the world everywhere—will be benefited by the movement. We may be compelled to pay a little more for our broadcloths and linens, our silks and satins, our railroad iron and our cutlery; but the gold with which they are now purchased, and which finds its way into the coffers of European bankers, will be kept in the hands of our own countrymen. The mission in which we are engaged is a great and a noble one; and one in every way worthy of our people, and of the age in which we live.

BESSEMER STEEL.—There are now seventeen large Bessemer steel works in Great Britain, producing steel at $100 per ton below the average price at which steel was sold before this new process was invented. These works are capable of producing 6,000 tons of steel weekly, equal to fifteen times the entire production of that metal before the introduction of the Bessemer process, and effecting an annual saving in the cost of steel in Great Britain alone of over $30,000,000! By the extensive cupolas and heavy hydraulic machinery, connected with some of the largest of these steel works, three men are enabled to produce one hundred tons of Bessemer steel per day. Perhaps no discovery, if we except the steam engine, has proved of such immense importance to the world as this.

Improvement in Making Steel Castings.

Mr. Thomas E. Vickors, of Sheffield, England, has recently patented what is claimed to be an important improvement in the manufacture of steel castings, which he describes as follows:

My invention of improvements in the manufacture of steel castings relates more particularly to casting heavy masses of steel, such as wheel-tires, gun-blocks, crank-axles, and other masses. The object of the invention is to prevent formation of large crystals, which are objectionable in steel castings. To this end, when the metal has been poured into the mould, or while it is being poured in, motion is imparted to the mould, so that the metal being in a molten or liquid state, is kept in continual motion or agitation. I do not confine myself to any particular motion, but I prefer an oscillating, reciprocating, or rocking motion, whereby the liquid metal will be gently agitated or moved in the mould. When the article to be cast is circular, such as railway-wheels or tires, an oscillating or rocking movement of the mould will be found sufficient to set the molten metal in motion, and thereby prevent the formation of large crystals. For some articles an intermittent circular motion will be preferable, while for others a reciprocating movement will answer the purpose. Other motions or compound movements may be advantageously employed in some instances. The particular motion to be used for the purpose of my invention must, therefore, be left to the discretion of the manufacturer. The most convenient method of carrying out my invention is to mount or place the mould on a frame, to which the required motion can be imparted either by the hand of the workman or by mechanical means, such as by the use of a crank, eccentric, or other equivalent mechanism, and this motion may, if desired, be continued until the metal is quite set.

NEW APPARATUS FOR SEEING THROUGH WATER.—The last number of the Edinburg *Review* says:

Currents in the very bed of a river or beneath the surfaces of the sea, may be watched, as Mr. Campbell informs us, by an arrangement which the smugglers used in old days. They sank their contraband cargo when there was an alarm, and they searched for it again by the help of a so-called telescope. It was nothing more than a cask with a plate of strong glass at the bottom. The man plunged the closed end a few inches below the surface, and put his head into the other end, and then he saw clearly into the water. The glare and confused reflection and refractions from and through the rippled surface of the sea, were entirely shut out by this contrivance. Seal hunters still use it. With this simple apparatus, the stirring life of the sea-bottom can be watched at leisure and with great distinctness. So far as this contrivance enables men to see the land under the waves, movements under water closely resemble the movements under air. Sea weeds, like plants, bend before the gale; fish, like birds, keep their heads to the stream, and hang poised on their fins; mud clouds take the shape of water clouds in air, impede the light, cast shadows and take shapes which point out the directions which currents flow. It is strange at first, to hang over a boat's side peering into a new world, and the interest grows. There is excitement in watching big fish swoop like hawks out of their sea-weed forest after a white fly sunk to the tree-tops to tempt them, and the fight which follows is better fun when plainly seen. (Vol. 1, p. 67.) Mr. Campbell suggests plate glass windows in the bottom of a boat; it would bring men and fish face to face; and the habits of the latter could be leisurely watched.

IMPORTANT INVENTION.—The invention of Ebenezer Danforth, of Geneva, Illinois, by which steam can be generated without the least risk of explosion, has been patented and sold to a New York company, with a capital of $2,100,000, for the manufacture of the apparatus.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The policy secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable, and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospect of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved on each principal part. When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is then registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the several ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Mr. Wm. R. Bradshaw, is our Special Correspondent and Traveling Agent. All favors or assistance rendered him in his progress through the country in behalf of our journal, will be duly acknowledged.

SAN FRANCISCO, Jan 1st, 1866.

Mr. A. C. Knox, is our fully authorized Traveling Agent, and all subscriptions, or other favors extended to him, will be duly acknowledged at this office.

SAN FRANCISCO, Jan 11th, 1866.

San Francisco:

Saturday Morning, Jan. 20, 1866.

NEW QUARTZ MILL—RICH LODE.—The vicinity of Coulterville, in Mariposa county, is noted for its great number of quartz lodes. The great mother vein running through the State passes through the town, and in almost every direction the county is intersected with rich paying lodes. Among the number, the Louisiana lode stands prominent for extent and richness. The Louisiana claim contains 3,500 feet, and varies from three to eight in width. A tunnel 200 feet in length cuts the vein at the depth of 100 feet from the surface, which is also reached by a shaft at the point of intersection. The property was purchased by Judge Heslep, during the past summer, who has associated with him his brother, W. G. Heslep, of Tuolumne county, and his son, P. C. Heslep, in its ownership and management. Since the purchase, extensive improvements have been made. A new engine, capable of driving from fourteen to twenty stamps, has replaced the old machinery. A Rix, Logan & Co.'s patent hammer mill is also added. A separate hoisting and pumping engine is also erected, making the mill one of the most complete in the State. The rock is a rich sulphuret, the quartz ranging in value from $10 to $50 per ton, and the sulphurets from $100 to $500 per ton. The great difficulty of working sulphurets, as is well known, is in the amalgamating process. Owing to the presence of sulphur and iron the gold cannot be saved without much trouble. The property was purchased with a full knowledge of the difficulty of saving the gold, and to meet the difficulty, Messrs. Heslep have erected one of Hagan's patent desulphurizing furnaces, through which all the sulphurets pass before being crushed. The process is simple, consisting only in the application of burning hydrogen gas to the rock in the furnace. The rock, it is claimed, is effectually decomposed by the application, and is rendered so friable that double the quantity can be crushed in a given time over the rock in its unprepared condition. The expense of this process does not exceed one dollar per ton, including the handling. As far as tried, the mill as well as the desulphurizing process, is said to be a complete success. The application of the Hagan's deoulphurizing process, it is stated, controls the most rebellious ores, enabling the operator to save within ten per cent. all the gold in the rock. The operations of the Messrs. Heslep is viewed with great intent by quartz miners, particularly the owners of sulphuret veins.

On motion, the presiding officers were made the permanent officers of the Convention. A Committee on Resolutions was appointed by the Chair, consisting of Messrs. Pierson of San Francisco, Rose of Amador, Foulke of Siskiyou, Gaskill of Butte, Leonard of Calaveras, Roberts of Nevada, Yule of Placer, Goodman of Plumas, and Wolcott of Tuolumne

I. N. Hoag said he was informed that the Assembly had to-day appointed a Committee of five to bring before this Convention the subject of establishing, in connection with an Agricultural and Art College, a Department on Mining and Assaying, and he therefore offered the following:

Resolved, That there be a Committee of five appointed by the Chair to confer with a like Committee of the Assembly upon the establishment of a Department of Mining and Assaying, in connection with an Agricultural and Mechanics' Art College.

The resolution was adopted and Committee appointed, consisting of Messrs. Hoag of Yolo, Ewer of San Francisco, Moyle of Sierra, Filkins of Yuba, and Williams of El Dorado.

A large variety of resolutions were presented. A portion were read and referred without debate in accordance with a vote of the Convention—finally the balance, by action of the meeting, were referred without reading.

Adjourned till ten o'clock on Thursday.

SECOND DAY.

Convention met at 10 o'clock, and without any important action, shortly adjourned till 1 o'clock to allow the Committee on Resolutions further time to report.

At 1 o'clock the Convention again opened, and the following preamble and resolutions were reported by the committee:

WHEREAS, Since the discovery of gold mines in California, it has been the policy of the General Government to allow all those who desired to mine for the precious metals in this State a free and unrestricted right to search for and discover the same, and when found, to hold and develop their several claims, subject only to such restrictions and rules as might be adopted by Conventions held by those who were engaged in actual mining enterprises in the several mining districts of the State; and, whereas, we believe that by the adoption of that policy the mining interests of the State have been developed more thoroughly and to a much greater extent than they would have been under any other policy that could have been adopted; and whereas, legislation for the survey and sale of mineral lands is threatened in the Congress of the United States, and it is seriously proposed to destroy the property interests which have been created in this State, under the license of the General Government, for seventeen years past, and to revolutionize the whole system of mining business and tenures under which the mines have been so far developed, the State has prospered, the Government has been supplied with the sinews of war, trade with advantageous markets, and the revenue a valuable and increasing resource; therefore, be it

Resolved by the miners of California, in General Convention assembled, That we are opposed to any survey, lease or sale of the mineral lands of this State, as injurious to the best interests of the General Government, and of this State, and utterly ruinous to the mining communities.

Resolved, That any increase of the tax upon the proceeds of the mines, would be onerous and injurious to the mining interests of this coast.

Resolved, That the bill introduced into the Senate of the United States by John Sherman, of Ohio, is singularly calculated to work the utmost confusion and loss to the present holders of mining property, who have invested their labor and capital in developing the mines; to destroy the vast canal interests of the State, the existence of which is necessary to the prosecution of mining, and to expel the great bulk of the population of the mining districts from their homes, their business and possessions.

Resolved, That the miners of California respectfully petition the Congress of the United States to respect the rights and property interests which the policy of the Government, long continued, has created and fostered.

Resolved, That we indorse the action of the Legislature of this State requesting the delay in the issuance of patents to the Central Pacific Railroad Company, or any other railroad company; until the Government has employed effective measures to segregate the mineral from the agricultural lands lying within the lines of the grant to the railroad company, and, while willing and anxious to aid and encourage in the construction of said road—the great national highway—we most emphatically protest against the cession of a vast section of mineral and timber lands for that purpose, involving the sacrifice and destruction of private rights already vested.

Resolved, That a Committee of five be appointed by the President of this Convention, the said President to act as Chairman thereof, to prepare a memorial to Congress embodying the sentiment contained in these resolutions, and to cause the same to be presented, through our delegation in Congress, to the President of the United States, the Secretary of the Interior, and Commissioner of the General Land Office.

Resolved, That a copy of these resolutions be forthwith forwarded by the officers of the Convention to each of our Senators and Members of Congress, with the request of the Convention that the same be laid before their respective Houses of Congress.

The several resolutions were read and adopted *seriatim*, with some slight amendments of a verbal character, and telegraphed to Washington the same evening.

Mr. Watt moved and carried that a committee of miners be appointed, whose duty it shall be to watch over and protect the interests of the miners of California, with power to call Miners' Conventions whenever they should think it necessary; such committee to consist of one from each county, to be selected by the delegations.

EVENING SESSION.

The Convention having adjourned at 3:25 P. M., re-assembled at 7:30.

The Committee on Resolutions recommended the adoption of the following:

Resolved, That in the opinion of this Convention the Legislature should at the present session enact a few plain, comprehensive and uniform laws in relation to the location, possession and evidence of abandonment of quartz mines situated upon the public lands within this State.

A minority of the committee offered the following as a substitute:

Resolved, As the sense of this Convention, that no legislation by the State Legislature upon mining tenures is desirable.

A long and earnest debate ensued—Messrs. Watt, Foulke and Briggs, speaking in favor of the adoption of the substitute, and Messrs. Belden, Hearst, Yule, Bodfish and Oliver supporting the original resolution. The yeas and nays were called for on the vote for the adoption of the substitute with the following result.

Alameda.—Noes: Wheeler, Eagar, Burr—3.

Amador.—Ayes: Mahoney, Rose, Hill, Gaus, Stewart, Hauford, Fleming, Briggs, Phillips, Purdy—10.

Noes: Belding, Frink, Jr.—2.

Butte.—Noes: Plum, Lassey, Pierson, Darrah, Ewer, Smith, Smith, Waldyer, Gaskill, Powell—10.

Calaveras.—Noes: Briggs, Hardy, Sawyer, Blake—4.

Colusa.—Noes: Robinson, Wilber.

El Dorado.—Ayes: Foster, Doncaster, Williams—3.

Noes: Schriber, Burnham, Smith, Morgan, Griffith, Jones, Campbell, Stowe, Bodfish—9.

Fresno.—Ayes: Mace—1.

Humboldt.—Noes: Huestis—1.

Monterey.—Noes: Hearst—1.

Nevada.—Ayes—Watt, Findley, Daniels, Bosworth, Cronise, Northey, Brady, Coleman, Miller, Leach, Attwood, Sykes, Davidson, Sargent, Atkins, Williams, Begole, Coombs, Neece, Buckman, Martin, Spencer, Rhea—23.

Noes: Phelps, Belden, Pattison, Crittenden, Morgan, McCown, Welch, Fenton, Abbey, Spooner, Dornin, Cadwallader, Everett, Lewis, Hatch—15.

Placer.—Ayes: McClure, Duck, Dods, Bumpus, Foster, Mallett, Neff, Kneeland, Ewalt, Lawrence—10.

Noes: Smith, Bowman, Arnold, Colegrove, Teffe, Gaylard, Benton, Palmer, Garland, Watson, Bosquit, Reamer, Scott, Yule, Stevenson, Miller, Baldwin, Tuttle, McGonegal, Carpenter, Largre—21.

Plumas.—Noes: Goodwin—1.

Sacramento.—Ayes: Bigler, Barton—2.

Noes: Montgomery, Mumford, Beck, Kendall, Park, Bowstead, Gear, Hopper—8.

San Bernardino.—Ayes: Satterwhite—1.

San Francisco.—Noes: Hearst, Wood, Pierson, Hollis, Bennett, Helmsley, Foye, Fitch, Snyder, Poole, Cutter, Manning, Dewey, Ewer, Alley, Waters—15.

San Joaquin.—Noes: Merwin—1.

Sierra.—Ayes: Glavin, Moyle—2.

Noes: Langton—1.

Siskiyou.—Ayes: Foulke, Steele, Luttrell—3.

Trinity.—Noes: Dorr—1.

Tulare—Ayes: Whiteman, Briggs—2.

Tuolumne.—Noes: Oliver, Evans, Perrin, Wolcott—4.

Yolo.—Noes: Reed, Hoag—2.

Yuba.—Ayes: Chadwick—1.

Noes: Crary, Carpenter, Filkins, Videau, Williams—5.

Total vote, 166; ayes (against legislation), 58; nays (favoring legislation), 108.

The question then occurred on the original resolution, which was carried by 99 ayes to 51 nays.

The following names were announced from the several counties as the Miners' State Central Committee, in accordance with Mr. Watts' resolution:

Messrs. E. D. Wheeler of Alameda, T. L. Jackson of Alpine, R. C. Downs of Amador, N. D. Plum of Butte, Thomas Hardy of Calaveras, E. Wilhur of Colusa, Bart Morgan of El Dorado, T. S. Benoist of Humboldt, S. N. Murch of Klamath, M. Coghlan of Lake, J. S. Sargent of Monterey, A. A. Sargent of Nevada, George W. Reamer of Placer, W. A. Bollinger of Plumas, C. T. Wheeler of Sacramento, George Hearst of San Francisco, F. J. Merwin of San Joaquin, W. T. Hopping of Shasta, M. A. Singleton of Sierra, Thomas H. Stcelo of Siskiyou, J. L. Downing of Sonoma, W. I. Hupp of Trinity, J. W. Freeman of Tulare, Allen Oliver of Tuolumne, O. F. Reed of Yolo, A. F. Williams of Yuba, B. T. Hill of San Luis Obispo, and J. E. Goodell of Mono.

[The Committee subsequently organized by electing Hon. A. A. Sargent, Chairman, and C. T. Wheeler of Sacramento, Secretary. Voted that five members constitute a quorum.]

The following resolution, offered by Hon. Thos. Findley of Nevada, was adopted by the Convention:

Resolved, That we regard a mining paper or journal of great importance to the mining interest of California, and we recommend the MINING AND SCIENTIFIC PRESS, of San Francisco, to the consideration and support of the miners of the Pacific coast.

I. N. Hoag, in behalf of the committee of five appointed to confer with the Legislative committee, submitted a report, recommending in substance that the Legislature proceed at once to the establishment of a Mining, Agricultural and Mechanic Art College; and that the necessary steps be taken to secure the benefit of the Congressional land grant, which has been made to this, in common with all the States, for the endowment of such an institution. We regret that our space to-day will not admit of the appearance of the report of this committee in full. We shall allude to it more at length next week. After some little debate, the recommendation of the committee was adopted, and a committee of five appointed to act with a similar committee of the Legislature to devise a plan for the organization of said College. By provision of the resolution, the Chairman was constituted a member of the committee, to whose name the following were added: Ayre of Calaveras, Snyder of San Francisco, Mallet of Placer, and Hanford of Amador.

After a vote of thanks to the officers of the Convention, for the manner in which they had discharged their duties, the Convention adjourned *sine die*.

We shall speak further of the proceedings next week.

FRANCE has now seventeen large commercial steamers running between Europe and the American continent and her colonies. Only a few years ago the Mediterranean service was all that this country produced in the way of a steam commercial navy. In May next, five steamers will run constantly between Havre and New York.

A HEAVY MORTGAGE.—The Cincinnati *Gazette* says that a mortgage deed was recently recorded in the office of the recorder of Trumbull county (Ohio), given by the Atlantic and Great Western railway company to John R. Penn, as trustee, for thirty millions of dollars, for which seven per cent. bonds are to be issued. The instrument required one thousand dollars of stamps.

WATER WHEELS.—A gentleman in this city recently received a letter from a young lady in Boston, which, among other items of information, contained the following: "I suppose you know that 'water-falls' are out of fashion. Ladies now wear what are called 'water-wheels'—mother and I have both got them."

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, January 20th, 1866.

There is no material change to note in the condition of the money market, and since the date of our last reference transactions in almost every department of business have been very much restricted. Bank accommodations continue to rule at about 1¼ ₱ cent. per month, and the tendency of the market is to greater ease.

Receipts of treasure from domestic sources since the 1st inst., show a material falling off, as compared with a like period last month, and amounted to less than $2,000,000. The Branch Mint in this city re-opened for the transaction of business on Thursday last, having been closed for several weeks past, to adjust accounts for the year 1865.

Bullion was in active request for yesterday's steamer, owing in part to the light receipts from the interior, and gold bars were sold at 850 and 860. Silver was also in good demand at ½ ₱ cent premium for bars of average fineness.

Legal Tender Notes have been more active at declining rates, and considerable sales were made at 72@70, closing at 70 bid. Our latest telegraphic advices from the East quote gold at 139 on the 17th instant.

The mining share market has exhibited little or no life this week, and the recorded sales are lighter than for some time past. Nevada advices are meager, but, so far as we can learn, no important changes have taken place in the appearance of any portion of the Comstock lode.

During the year 1865, the total dividends disbursed to shareholders by the Gould & Curry, Savage, Yellow Jacket, Imperial, Belcher, Empire, and Chollar companies amounted to over $1,900,000; and the aggregate assessments levied by the Savage, Yellow Jacket, Chollar-Potosi, Crown Point, Belcher, Alpha, Ophir, Bullion, Overman and Sierra Nevada companies, slightly exceeded $1,950,000.

Gould & Curry declined from $870 to $800, rose to $860, fell to $835, and then sold at $820, closing at $825. This company have a very considerable accumulation of ore at their mill, and the dump at the mine is also full to repletion. Up to this time, however, the severity of the weather in Nevada has not interfered with hauling.

Savage has been actively dealt in, and some 100 feet changed hands, receding from $700 to $657½, rallying to $690, dropping to $660, and selling yesterday at $630@635. The winze from the lower level is now down some 85 feet, and ore was found to a depth of 62½ feet. A drift 20 feet to the east will, it is thought, meet the same body. The bottom of this winze is in porphyry, showing a small stratum of metal dipping to the east. The working shaft is soon to be started for the 6th level, 80 feet deeper than the 5th. The northwest body on the latter level is said to look well, and a deposit of good ore has recently been cut on the sill floor of the 1st station toward the west.

Yellow Jacket fell from $460 to $410, seller 25, rallied to $430, receded to $412, seller 10, and sold yesterday at $400@370. At these rates some 250 feet in all were dealt in. During the week ending Jan. 8th, 820 tons of second-class ore were extracted from the mine. The company's mill worked some 450 tons, yielding $13,743 (an average of over $30), and 258 tons were crushed at outside mills, producing $8,561, or $29.93 per ton.

Crown Point has met with trifling sales, declining from $585 to $545, and then selling at $550. During the week ending January 12th, 403 tons of ore were taken from this mine, one-half of which came from the lower level. The west body of ore in the latter continues to look well in the drifts running north and south on the lode. This ore is now averaging about $40 per ton, and one or two outside mills are soon to be employed.

Ophir fell from $330 to $320, rose to $335, and sold yesterday at $322½ @325. The south drift from the 9th gallery is now in some 43 feet, nearly as far as the former one extended. A small body of ore, worth from $50 to $70 per ton, has been found between the 5th and 6th galleries, which renders it unnecessary to send rich ores to the River mill, in order to bring up the average of the poorer. Receipts of bullion thus far, the current month, exceed $31,000.

Hale & Norcross has been in fair request, and small sales were made, advancing from $305 to $325, receding to $305, and selling at the close at $315. Developments are progressing slowly. At present an air connection is being made from the foot of the incline.

Chollar-Potosi fell from $150 to $137, then sold at $240, buyer 30, (assessment delinquent,) receding to $232, rallying to $234, and selling yesterday at $230@224. During the week ending January 12th, 324 tons of ore were sent to custom mills, 102 tons were sold at $8, 60 tons at $5, and 238 at $3 per ton. The new shaft is now timbered to a depth of 552 feet, and the drift to the ledge in 135 feet.

Alpha steadily declined from $170 to $90, seller 30, then sold at $100, closed at about $300—assessment of $200 per foot delinquent.

Empire Mill and Mining Company sold at $240@210 per share closing at $215 bid. Belcher fell from $125 to $110, rallied to $250, (assessment delinquent,) and sold yesterday at $220. The various drifts have disclosed nothing new recently.

Imperial fell from $117 to $95, seller 60, then rose to $111, and was dealt in at the close at $107@108½. The first two shipments of bullion from the mine this month amounted, in the aggregate, to $34,000, as against $27,000 for a corresponding period last month.

Overman has been dealt in within a range of $44@40, closing at $36 bid. Bullion steadily declined from $37 to $33, and closed at $32 bid. Exchequer fell from $8¼ to $6. Sierra Nevada declined from $11 to $9, and closes at about $9.

Union Insurance Company was sold at $118; Fireman's Fund at $121, and Spring Valley Water at $56½; California Steam Navigation was dealt in at 62@61½, closing at $62 bid.

The aggregate sales of stocks since Saturday last amounted to $573,868.

REESE RIVER.—The following are the ruling prices at Austin:—Good miners receive from $4 to $5 a day in gold, and get board at $10 per week; masons, carpenters, and mechanics $6 to $8; laborers are paid from $50 to $60 per month and board. Flour is $14 per hundred; butter 75 cents per pound, cheese, 50c.; bacon, 45c.; dried fruits, 37½c.; beef, 12@15c.; potatoes, 10c.; feed barley, 15c.; hay, 4c.; eggs, $1.25 per dozen, and other produce in the same proportion.

Even the tenderest plants force their way up through the hardest earth, and the crevices of rocks; but a man no material power can resist. What a wedge, what a beetle, what a catapult, is an *earnest* man! What can resist him?

The mind is like the body in its habits—exercise can strengthen as neglect and indolence can weaken it. Both are improved by discipline, both ruined by neglect.

It is very well to blush when you are detected in a mean act; but you had a great deal better blush when you thiok of committing it.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,
423 Washington street.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Shareholder's Proxy.

KNOW all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186, according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

.....

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ....., 186, an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186, in United States gold and silver coin to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186, to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

..... Secretary.

Office.....

NOTICE.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ..... 186, the several amounts set opposite the names of the respective shareholders as follows, to wit:

Names.	No. Certificate.	No. Shares.	Amount.
Theophilus Thistle	23	14	$140 00
Peter Pipe	2	3	30 00

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ...., 186, so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

To Publishers.

An editor and practical printer, of good experience and recommendation, desires a situation and will accept a moderate salary on trial. Address this office.

THE newest thing oot is "plampers" for hollow-cheeked damsels. The plamper is made of porcelain, pear-shaped in form, flat on one side, and bulging oot on the other. They fit on the inside of the cheeks, giving a round, plamp appearance; hence, doubtless, their name.

WHEN Sir Walter Scott was urged not to prop the falling credit of an acquaintance, he replied: The man was my friend when friends were few, and I will be his, now that his enemies are many."

LITTLE THINGS.—As daylight can be seen through very small holes, so little things will illustrate a person's character. Indeed, character consists in little acts, daily life being the quarry from which we build it up, and rough hew the habits that form and stamp it. This is so.

To Blacksmiths.

An excellent, strong lad, from the interior, 17 years of age, desires to learn the Blacksmith's trade. His parents wish him to engage with a reputable firm, and learn his business thoroughly. Address, or inquire at the office of the MINING AND SCIENTIFIC PRESS. 2v11tf

Boiler Makers, and Workers in Sheet Iron, Brass and Copper.

These Works have lately been increased by the addition o new shops on Fremont Street, doubling the capacity of the original establishment. Their facilities for turning out machinery promptly and efficiently, are now unequaled in the State. Their Boiler Works have also been enlarged correspondingly.

The Company are prepared to execute orders for all classes of Machinery and Boiler Work, such as

Mining, Steamship, and Steamboat Machinery,

Railroad Machinery, Locomotives, Car Trucks, Car Wheels, Flouring Mills, Quartz Mills, Sugar Mills, Saw Mills, Housings and Irons; and

Manufacturing Machinery of Every Kind.

Sole Manufacturers of

HEPBURN & PETERSON'S REDUCING PAN AND AMALGAMATOR
BEATH'S AMALGAMATOR;
HESSE & MOORE'S IMPROVED HOWELL QUARTZ CRUSHER;
BAUX & GUIOD'S AMALGAMATOR AND SEPARATOR;
FAUCHERY'S QUARTZ GRINDER AND WATER WHEEL;
JONVAL'S IMPROVED WATER WHEEL;
LEFFEL'S AMERICAN DOUBLE TURBINE WATER WHEELS.
STEVEN'S PISTON PACKING RINGS.

They have also a large assortment of Patterns for Pumping and Hoisting Machinery, Gearing, Pullies, Water Mill Irons, Hydraulic and Screw Presses, Retorts, Furnaces, Grate Bars, House Fronts, Ornamental Fence Posts and Paling, Stove Ranges, etc., etc.

Quartz Stampers, Shoes and Dies, of the best Hard Iron. Quartz Screens of Russia Iron Punched to Order. 27

Miners' Foundry
—AND—
MACHINE WORKS,

First St., between Howard and Folsom Streets,
SAN FRANCISCO.

EVERY description of Iron and Brass Machinery, the BEST and MOST ECONOMICAL, manufactured in the State of California, will be furnished with dispatch at the MINERS' FOUNDRY AND MACHINE WORKS, such as

Steam Engines and Boilers, Flour, Saw and Quartz Mills,

Machinery, Mining Pumps, Amalgamators,

Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities, will be afforded ample facilities, FREE OF COST.

All parties desiring accurate and highly finished drawings and superior Machinery, at most reasonable rates, are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

UNION IRON WORKS!

Corner First and Mission streets,
SAN FRANCISCO.

ESTABLISHED IN 1849.

HAVING INCREASED OUR FACILITIES IN EVERY Department, we are now prepared at the shortest notice and at the most reasonable rates, to furnish all kinds and description of Machinery, including Steam Engines, Quartz Mills, Mining Pumps of all kinds, Hoisting Gear, Gas Work, Laundry Machinery, Architectural and Ornamental Castings, Sugar Mills, Saw and Flour Mills, Water Wheels of all kinds, Hydraulic, Hay, Rag, Screw and Drop Presses, Coining Machinery, Pile Drivers, Bark and Malt Mills, and all kinds of Castings.

Engines.

Marine Engines, Oscillating and Beam; Stern and Side Wheel Boats, Locomotives, Stationary Engines, Horizontal, Upright, Oscillating and Beam, from six to fifty inches diameter. Also, Scott and Eckart's Adjustable Cut-off Regulator—best in use; W. R. Eckart's Balance Valve for Stationary Engines; Woodward's Patent Steam Pump and Fire Engine.

Boilers.

Locomotive, Flue, Tubular, Upright, Cylinder and Cornish, and every variety of Boiler Work. All sizes of tubes and pipes for pumps.

Amalgamating Machinery.

Wheeler & Randall's improved Tractory Curve Pan, Zenas Wheeler's Improved flat bottom pan, Beldin's pan, Veatch's tubs, Prater's concentrators, Wahlee's pans, Beers' pan, German Barrels, Arastra Gearing, Chile Mills, Settlers of all descriptions, Retorts of all sizes and shapes, for Silver and Gold, Portable Stamp Mills, Straight Batteries, for wood or iron frames, Dry Crushing Batteries, or machines with the latest improvements, every variety of Stamps, Mortars, Cams, Pans and Tubs.

BLAKE'S PATENT QUARTZ CRUSHERS, of all sizes.

Oil Boring Tools and Machinery,

Of the latest and most approved construction, made from drawings lately made by Prof. Blake at the oil wells in Pennsylvania.

We have the facilities for working gold and silver quartz and other ores, to test their value, by the hundred weight or ton.

Russia Iron Screens, of all degrees of fineness and of all qualities of iron.

All work done in the best manner at the lowest cash prices.

To Printers.

We have for sale, at a bargain, a Second-hand Half-Medium (largest size), Ruggles' Engine Job Printing Press, of most approved pattern. It is in excellent condition, and warranted to work as good as new. Apply soon, at the office of the MINING AND SCIENTIFIC PRESS. 19v11tf

COMPLIMENTARY.—A friend of the MINING AND SCIENTIFIC PRESS, writes as follows: "I preserve all the numbers of the PRESS, and I find the 'Alphabetical Index,' attached to each volume, very convenient. It seems to add to the value of each number, and makee it more of an object to preserve them. A volume of newspapers, bound together without containing an index, always reminds me of a storehouse with a faulty lock; when we wish to obtain an article, valuable time is wasted before we can get at it. I think every volume of journals worth preserving, should contain an index."

THE LATROBE MINES.—Two thousand tons of copper ore were shipped from Latrobe during the six months ending January 1st. It is expected that the quantity will be considerably increased in the next six months. The mines are close to the Placerville and Sacramento Valley Railroad.

REV. DR. STONE, of Boston, having accepted a call from the First Congregational Society in this city, will, we are informed, leave the East on the 11th day of February, and may arrive here so as to preach to his new society on the 4th of March.

Benicia College.

THE TWENTY-SECOND SESSION HAS JUST OPENED. Pupils received at any time.

The Instruction is divided into three parts—The Elementary course; the English, or Scientific Course; and the ordinary College Course.

Pupils generally, and especially those in the Preparatory Departments, board at the Institution, under the direct charge of the Teachers.

For further information, send for Circular.

3v12-3m C. J. PLATT, Principal.

Portable Steam Engines!

"Hoadley's" and "Hittinger's" Make,

COMBINING THE MAXIMUM OF EFFICIENCY, Durability, and Economy, with the Minimum of weight and Price.

These Engines are favorably known, a large number being in use on this coast for hoisting, pumping, threshing, milling and mining purposes.

Steam can be got up on these Engines in fifteen minutes after reaching the place of operation, and the time, expense of setting boilers, machinery, and "construction account" saved, (which is often the difference between the successful and unsuccessful operation of milling enterprises,) in fact, the portable principle is the pioneer's friend, and enables him to draw engines on their own wheels to his cabin door, and plant on the outermost confines of civilization the saw and grist mill, and it has done and will do more to help subdue the continent than any other of the modern motors which are crowding society and normalizing the world.

All sizes on hand from 3 to 30 horse power, with and without carriages.

Also, Portable Saw and Grist Mills.

For sale by TREADWELL & CO.,

3v12-3m Corner of Front and Market streets.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition heretofore prescated and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

THOS. B. BISHOP, Attorney. 2v12-4w

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by C. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Dennison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

Chay Wo Sac	184	5	12 50
Chong Tung	235	20	50 00

And in accordance with law, and an order of the Board of Trustees, made on the 24 day of December, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the salesroom of John Middleton & Son, on the 20th day of January, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

jan6 JOHN F. LOHSE, Secretary.

Salamander Gold and Silver Mining Company, Mill Valley District, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 28th day of December, 1865, an assessment of twenty (20) cents per share was levied upon each and every share of the capital stock of said company, payable on Friday, the 29th day of December, 1865, in United States gold or silver coin, to the Secretary, 12t Front street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 27th day of January, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 10th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

F. D. GALLAGHER, Secretary.

Office, No. 35 Metropolitan Block, San Francisco, California. dec30

Wide West Gold and Silver Mining Company. Location: Silver Mountain District, Alpine County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 4th day of January, 1866, an assessment of three ($3) dollars per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at his office, 330 Davis street, San Francisco, or to F. L. JACKSON, Superintendent, at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 21st day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

JOSEPH GREEN, Secretary.

Office, 330 Davis street, corner of Washington street, San Francisco. jan6-4w

Yuba Gold and Silver Mining Company, Brown's Valley, Yuba County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 1st day of January, 1866, an assessment of three dollars ($3) per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, No. 210 Pine street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of February, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

P. R. RINGSTROM, Secretary.

Office, 210 Pine street, up stairs, San Francisco.

N. B.—The above assessment is for the payment of balance due on machinery, and its erection at the mine. ja6

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Calendars for 1866.—THE MINING AND SCIENTIFIC PRESS JOB PRINTING OFFICE is prepared to execute every manner of Counting-house Calendars and advertisements for various business men, on short notice and moderate terms.

Constitution and By-Laws
—OF—
Mining and Prospecting Companies
Elegantly printed, with care and dispatch, at the office of the **Mining and Scientific Press.**
☞ Orders from the interior faithfully attended to.

English Idea of Our Armies.—Except the squadrons which charged at Worcester and Naseby, no army was ever sent in the field liks that of Sherman's. Many of the rank and file were gentlemen — poets, writers, advocates, preachers, bankers, laudlords; such men as would mix in London society and he members of Pall Mall cluhs. Many of the cavalry rods their own mares; many of the infantry bought their own arms. Many were persons of estate, accustomed to good houses and good living. They had friends in high places and luxurious homes awaiting their return. Some of ths best regiments of Massachusetts and of the Western States were in the camp. And they wsre strong in number as in spirits; 70,000 fighting men of the hest hlood in America, counted after all the non-effective had heen left hehind. Whers were they going to? One thing was clear, they were going to defy all military rules, and at ths risk of their lives, enlargs the art of war.

By Mail.—The Mining and Scientific Press will be sent by mail to any part of the civilized world. In case of removal, subscribers have only to inform us of the post-office address of their old and new location, and the paper will be sent accordingly.

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our forme location), where we may now be found, with more commodious apartments and an extensive Joa Printing Office.

San Francisco, April 10th, 1865.

Economy in Advertising.—The Mining and Scientific Press is the best and most economical mining advertising medium in this city. Our terms are less than one half the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Deserved Testimonial..

Grizzly Flat, Oct. 18, 1865.

Messrs. Hunderforn & Henry—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
S. F. DAVIS.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers.
Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

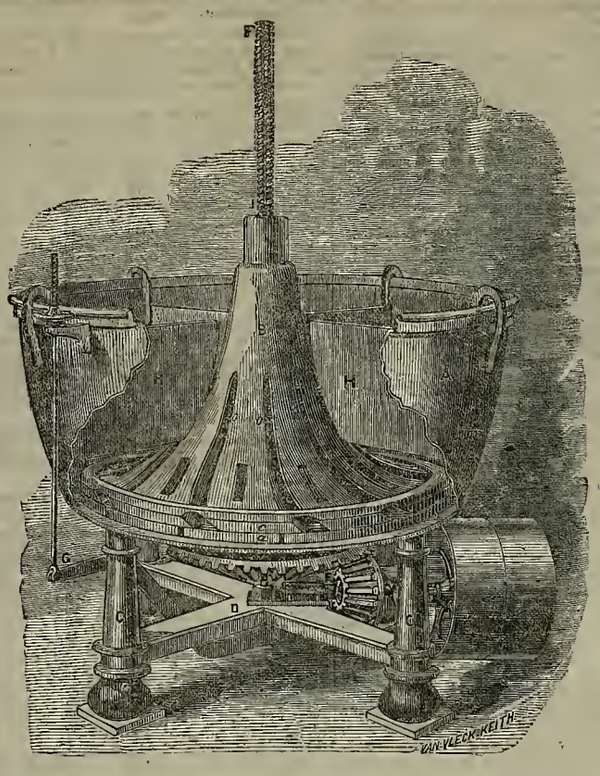
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

[ac Table of Contents of this book will he found on pa 415 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v1I



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and o, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it he.

Another property of excellence in this machine is that the metal or substance to he amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been hurnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works.

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st

SOMETHING ABOUT WINE.—The "Champagne trials" in San Francisco have brought out the facts that the entire product of genuine wine exceeds twelve trillions of bottles per annum, of which more than three trillions are sent to the United States. The amount shipped to California is reported by the ugent of the Treasury Departmeat in France to be much greater than that sent to any other locality, consideriag the population of the State and the country tributary to it; and it appears that the undervaluation of the article was so great in 1863 that in that year the Government was defranded of more than half a million of dollars of duty.

MAN is continually saying to woman, Why will you not be more wise? Woman is continually saying to man, Why will you not be more loving? It is not in their wills to be wise or to be loving; but unless each is both wise and loving, there can be neither wisdom nor love.

ERROR.—The Californiu *Christian Advocate* says that General Grant belongs to California. This is a great error. He belongs to the Union.

AT the Winchester (Eng.) Sessions, four men were indicted for steuling beans. A gentleman present asked another. "What have they been doing?" "Been stealing," was the reply.

IT is easy to say, "Know thyself," but who is to introduce you? Most people go through life without making the advantageous acquaintauce in question.

THE French savans say, to obtain sufficient nourishment from oysters Blone a man must eat sixteen dozen per day.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, MR. TURNER HAMILTON, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where sump copies of our publications can always be found.

Traveling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1864, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales o mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEE and SHAREHOLDES, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and correct than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

DEWEY & CO.,
4v11 Office Mining and Scientific Press.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,
Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

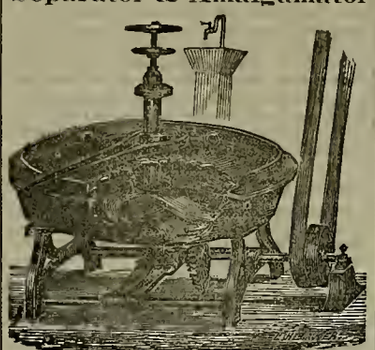
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jefferson Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco
Iron Works, San Francisco. 4v8-6tf

BLAKE'S
QUARTZ BREAKER
Is now extensively used for breaking hard masses of
Quartz or Ores
To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, WASHOE, AUSTRALIA,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars contalning further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.
CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th, (Illustrated in the Mining and Scientific Press, April 9th, 864.) HEPBURN & PETERSON.

AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.

Parties wishing to erect such furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 416 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROOND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,
No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

Steven's Pressure Packing.
Patented March 7th, 1865

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df ANDREW STEVENS.

SALMON'S
PROPELLOR AMALGAMATOR
— AND —
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

9v11 J. & W. C. SALMON.

McCOMB'S
CUMULATIVE POWER PRESS
AND
ARROW TIE.

E. C McCOMB, Agent.

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet
— TO THE —
ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

VOLUME TWELFTH.—The MINING AND SCIENTIFIC PRESS, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons," its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30¾. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.
These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates then draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlers for themselves, at the PACIFIC FOUNDRY,
1v1 San Francisco.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day,

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

Prater's Patent Concentrator

(Known as HUNGERFORD & PRATER'S Concentrator,)

MANUFACTURED AT THE

San Francisco Foundry and Steam Engine Works.

Corner Fremont and Mission Streets.

All orders promptly attended to.

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

SUBSCRIBE FOR IT.—The large, illustrated sixty four column weekly newspaper—the San Francisco MINING AND SCIENTIFIC PRESS—should be taken by every miner, prospector, and intelligent citizen throughout Colorado, as it gives a mint of most useful information to be gained no other way, on mining matters generally.—[Rocky Mountain News.

THE OIL INTEREST.

Ths severity of the weather has caused the stoppage of work, for ths present, on many of the oil wells in Humholdt county. We hear of no new developments or oil shipments from that quarter for the past few weeks.

The Adams well company, the pioneer enterprise at Mount Diablo, after finding promising indications in former horings, which were attempted without proper tuhing, and were consequently obstructed hy caving, which rendered them useless, heing now providcd with the hest horing instruments, steam engine and other facilities, have contracted with responsihls parties to sink a new well to a depth of 600 feet, unless a satisfactory snpply of oil is found in less distancs. The Contra Costa *Gazette* says that in sinking this new well, and at less than a hundred feet, the drills struck a cavity yielding oil in such quantity that it promises to warrant pumping before sinking further. But it is douhtful if the trustees will consent to any delay iu the work, unless satisfied of having a considerahls supply of oil to pump on.

The first shipment of oil from the Santa Cruz petroleum works, the pioneer enterprise in Santa Cruz county, was made a short time since, and consisted of 700 gallons, which ths Santa Cruz *Sentinel* says was a fins article, equal to the hest hurning and luhricating oils of Eastern manufacture. Ths supply of illuminating and luhricating oils, as also a first rate article of coal tar, will now bs constant and of considerahle importance. Some twenty rstorts, and a large distillery for refining the oils will he running night and day, turning out a large quantity, ready for market. The same paper learns that several parties are negotiating to erect retorts and refineries, at different places on ths San Gregoria ranch, and other points on the coast in ths vicinity of Pescadero.

From the Lsxington well, in Santa Clara county, we also hear favorable reports. A gentleman informs the San Jose *Courier* that 250 gallons of oil were recently pumped from this well at one timc. Mr. McClaren, the contractor, has heen at great expense during the past year, and has sunk the well 450 feet. He labored under serious difficulties at times, all which his energy and perssverance have overcoms. The company is now proceeding to sink a still greater depth—the supervision of the work heing in chargs of Mr. McClaren. It is estimated that from 500 to 800 harrels of oil per month might he obtained from the springs and wells now open in the State, were horing operations to ceass where they now are, and attention confined to collecting the oil which is now obtainable. At least 1,200 harrels have already been received in this city, and there is prohably half as much more now at ths various springs and wells ready for transportation. Although as yet no flowing wells havs heen struck, the prospects are amply sufficient to warrant ths assumption that at least a moderats yield of oil will he obtained in nearly every neighhorhood where any very extensive works have heen undertaken. Few, if any, of the wells have yet reached a depth nt which any very sxtensive yield of oil could he reasonahly he expected. Borings, however, are still going on, and the utmost confidence is felt in ultimate success. The recent establishment of refineries in this city, which secures a ready market for the crude oil, has given additional confidence to the oil seekers. Ahout seventy companies have heen organized in this State, and some sixty wells are now in progress, varying from the mere commencement to 450 feet in depth.

A National Mining Bureau.—Senator Stewart, of Nevada, has introduced into the Senate a hill providing for the formation of a Mining Bureau, at the hsad of which is to he a Commissioner of Mining. The hill is drawn upon the same plan as that providing for an Agricultural Bureau, passed a few years since. Considering the growing importance of the mining interests of this country, and the vast mineral resources of the United States, such a Department is hecoming a necessity.

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

The title of our journal is a trutbful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Mcn of the Pacific Coast, whicb cannot be derived from books, or other publications.

Each Volume comprises, in reality, a hook of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed hy our rich and peculiar resources, and identical with our own indnstry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we sball make the Press a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now hrighter than at any former period. Our facilities for furnishing a valuable journal are constantly increasing.

Following are some of the many opinions generously expre ssed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of tbe Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should he taken by every man owning "feet" [and hrains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the Press.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The Press is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the Press.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should he taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the Press, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the Mining Press, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the Press has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Na.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The Press fills the hill.—[Recse River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the Press can render as essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

THE ADAMS OIL WELL.

We have already stated that the proprietors of the Adams well, near Mount Diablo, had been obliged to abandon their first well and had commenced operations on a second one, some seventy-five feet lower down the ravine than the first. We now learn that after reaching a depth of nearly 100 feet, a good show of oil was found accompanying the water that flowed from the well. After reaching a depth a little over 100 feet, they struck another oil strata which materially increased the show of oil at the outflow of the well. At the depth of 125 feet they encountered some very hard rock, at which they worked for several days, gaining but a few inches in depth during that time, when the augur suddenly dropped into a cavity, from which considerable increase in oil made its appearance. A pump was immediately put in, and after pumping two days they had saved five barrels of oil, and estimated that they had lost nearly as much more, from imperfect arrangements for saving.

The strata here stands at a very high angle, so much so that in starting the well, only about sixty-five feet from the one first sunk, they had to go down about 125 feet before striking the top of the strata in which the first well was commenced; so that all the oil thus far encountered in the present well lies, geologically, above that obtained in the first well. It is now the purpose to go down fifty-five feet further, which will take them to the first oil strata struck in the original well, and which was shut off by their tubing. At this point they propose to again put in their pumps. The present well is in firm rock, and does not require tubing, so that when they again commence pumping, they will have at least these strata of oil-yielding rock in the well. The proprietors are now more than ever confident of developing a profitable well. The oil from this locality is probably the most valuable which has ever been obtained from any well in California, or any where else.

The progress of Southern trade, since the suppression of the rebellion, attracts attention. In cotton, some 1,100,000 bales have been delivered at Northern or Western ports and towns, and at the estimated value of $100,000,000. Most of this has been paid for in money, which is at this time being applied to the development of the industry of the South.

The venerable President Nott, of Union College, is failing very fast, and can scarcely survive but a few days.

Communications.—We have received an excellent list of communications which will receive attention next week.

A NEW CEMENT MILL AT FRENCH CORRAL.

We have been put in possession of a particular description of a new cement crushing-mill, which was started about the 1st of January last, on the claims of the Empire Tunnel company, at French Corral, in Nevada county. This mill has been constructed to work what is known as the "blue cement," a kind of gravel which cannot be washed by any of the ordinary means of sluice washing. The mill consists of a 10-stamp battery and hoisting works, driven by water power; the battery being driven by one wheel, and the hoisting works by another. The wheels are each one of McAuley's improved, tangented turbines, more familiarly known among miners under the name of Iron Hurdy-Gurdy Wheels. They are driven by water taken from a common hydraulic hose-pipe, having a head or pressure of 122 feet.

The wheel on the hoisting drums is four feet in diameter, and is attached to the same shaft that carries the hoisting reel, thereby avoiding all gearing, belting, or other intervening machinery, which produces a large amount of friction, when arranged after the ordinary manner of construction.

The wheel that drives the stamps is eight feet in diameter, and is hung directly upon the cam-shaft, avoiding all intervening friction, the same as in the hoisting gear.

The speed of the battery is regulated by means of a throttle-valve, attached to the water pipe, so that the stamps can be made to drop as rapidly or slowly as may be required. The stamps weigh 800 pounds each, and work in high mortars—five stamps in each mortar—and are set to drop twelve inches. The speed at which they are usually driven is 85 drops for each stamp per minute, or 850 for the entire battery. The wheel is capable of giving a much increased velocity, as was shown, while testing the machinery, previous to its delivery to the company.

The mortars employed entirely inclose the stamp heads, and are provided with a double discharge, having screws on both sides. The amalgamating-room is under the feed floor.

The mortars are provided with copper plates for amalgamating in the battery, and also with large copper plates in front of the screens.

The mill was built on contract, and delivered in complete mining order by the Miners' Foundry of San Francisco. It was designed, built, and put in operation under the personal superintendence of Mr. Thomas McAuley; the millwright work being done by Mr. Frenden-burr.

The mill is capable of crushing fifty tons of cement per day, and is pronounced by millmen who have examined it the most substantial and well-finished mill, both in the machinery and millwright work, they have yet seen. It is claimed that, taking into consideration the amount of water used, and the pressure or hight of penstock, and the amount of duty performed, the wheel is giving a much larger percentage of work than was ever before obtained from a water-wheel of that class, or, indeed, from any other style of water-wheel, except, perhaps, hydrostatic wheels, or those working on the principle of the hydrostatic engine.

This mill being the first one put up in this vicinity, was considered by the owners somewhat in the light of an experiment, they having great doubts as to whether their cement was rich enough to pay for crushing; but after the first clean-up, we understand they were offered and refused $1.50 per day for the receipts from the mill, the running expense not reaching $40. The cement from which this clean-up was obtained, was refuse gravel, which had been thrown aside as utterly worthless for sluicing, by reason of its unyielding nature. The success of this mill will, doubtless, lead to the building of several others in that vicinity.

Petroleum Convention.—We understand that it is in contemplation by several parties interested in prospecting and boring for petroleum, to propose the holding of a Convention of persons engaged in that business. This step is proposed from the fact that the Miner's Convention, at Sacramento, decided to take no action in relation to petroleum, on the ground that that business was strictly foreign to the purposes had in view in calling that Convention. It appears to us that much good might grow out of such a movement. The petroleum interest is one which certainly promises to become one of no inconsiderable importance; and in the present uncertainty of possession of such lands, it appears eminently proper that some concert of union and action should be aimed at, in this particular, before conflicting interests become too much mixed to admit of a simple and friendly adjustment upon some common and equitable ground. The columns of this paper will be open to any expression of opinion upon the subject, which may be desired by parties interested.

Severity of the Winter in Oregon.—Parties who recently arrived at Portland from Walla Walla, say that the road to Boise is lined with deserted wagons. Teamsters, when overtaken by the storm, cut loose their animals, and fled for safety. Much of the stock is in poor condition. Many teamsters will lose their entire trains.

Advices from Fort Lapwai, up to the last of December, say that the weather there has been intensely cold—the mercury having fallen to 25° below zero. Several Indians and Chinamen, and quite a number of cattle and hogs had been frozen to death.

Great Springs.—There is a spring in the centre of the town of Huntsville, Alabama, from which flows a stream of water large enough to float a thirty ton batteau. It is believed to be the largest spring in the world, and it is an object of great interest to the people of the neighborhood and visitors. Another spring, near Florence, in the same State, throws out a body of water estimated at 17,000 cubic feet per minute.

The Connecticut River to be Leveed.—The people of Hartford held a public meeting on the 27th ult., to consult about building a dyke along the Connecticut river, to prevent the annual flood. A handsome sum has been pledged for this purpose by private subscriptions.

The Mines of Utah.

The daily Union *Vedette* says: "It is gratifying to every well wisher of Utah, and to the cause of good government and progress, to know that the mineral resources of this territory are beginning to attract attention abroad. For several years, as the *Vedette* has from time to time chronicled in modest phrase extensive and exceedingly rich silver veins have been discovered, first by the soldiers and subsequently by the gentile civilians who floated in upon us. For want of the needed capital to construct furnaces, erect machinery and develop these leads, our advancement in extracting the precious metals has not been so rapid, nor our progress so marked as it otherwise would have been. But enough labor has been performed, and sufficient advancement in the development of Utah mines been made, to assure the most skeptical that this Territory presents one of the widest and most lucrative fields for capital, energy, science and labor. The hardy adventurers who discovered the rich mines of Rush Valley and Bingham Cañon, who are developing the Cottonwood and Western Districts, and those who have explored and opened up the marvelous riches of Meadow Valley and Pah-Ranagat regions, on the southwestern verge of the Territory, now begin to reap the reward of their perseverance, energy, and faith in the assurance that capital will soon flow in upon them to give value to these mines, and remunerate itself in early and practical development. During the past year representatives of Eastern and European companies have visited Utah, accompanied by gentlemen of scientific acquirements. These gentlemen, as we know, have passed through our several mining districts, carefully examined the ores and the mines, and taken extensive notes on which to base their reports. Not one have we met, and we have had the pleasure of seeing most, if not all of them, but have expressed the highest encomiums on our mines, even after having traversed the world-wide silver regions of Nevada, Idaho and Montana. Of those whose opinions are entitled to the greatest weight, we may mention Professor Eaton of New York, and Professor Pritchett of England, both gentlemen of scientific and chemical attainments, and conversant with practical mining. One and all concur that with the facilities to be found here in close proximity to the silver mines, wood, water, coal, fire clay, iron and copper, in connection with the character of the ores and the practicability of separating the baser from the precious metals, the mines of Utah present the most desirable and promising field for the investment of capital, enterprise and labor. These ores are mainly argentiferous galena, and their reduction and separation can be accomplished without the enormous expenditure for mills and heavy crushing machines required in most other countries. All that is absolutely necessary to transmute the ores into glittering silver are furnaces for melting them down. At Stockton in Rush Valley, but forty-five miles from this city, the crudest furnaces and the most simple devices have sufficed to prove the tractibility of the ores and the facility and cheapness of their separation. One or two companies of Eastern capitalists have located there, purchased extensive interests in the mines, and are engaged in putting up the necessary furnaces and apparatus, on a more extended scale than the original locators were able to do. In the early spring we are promised the most desirable results, and preparations are being made to develop the Pah-Ranagat and other districts by capitalists from the East as well as by our own citizens.

Oil wells or diggings of a highly promising nature, have been discovered in England. At present, says the London *Shipping Gazette*, we are unable to give the particulars, although assured that they will prove of such a nature as to astonish the public.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

BISULPHIDE OF CARBON.

[By Dr. Lanszweert.

Having lately been severely victimized by the use of this deleterious and very explosive compound, it may be proper for me to place the public on its guard against a careless use of tha sama; and having, moreover, noticed an advertisement in your journal that a gentleman of this city, offers to the public a new roasting furnace, by the use of which "all the sulphur [evolved in the process of roasting sulphurets] is saved; by being converted into bisulphide of carbon, which is a valuable product, and will pay nearly all expenses," I have thought it might not ba out of place to give, through your columns, a few facts with regard to the manufacture, usa, and nature of this singular substanca. I think the geentleman above alluded to must be mistaken, both with regard to the real nature of tbe process of its manufacture, as well as in regard to its commercial value. He certainly cannot convert "*all* the sulphur" contained in the sulphurets "into bisulphide of carbon;" neither is it possible for the bisulphide so produced to "pay nearly all expenses," at its present nominal value of about five ceuts per pound, at which price it is now offered to the trade. The following notes on tha manufacture, apparatus used, rectification, properties and industrial application of this agent, may be interesting to your readers:

Bisulphide of carbon was discovered in 1796 by Lampadiua, and is expressed by the formula CS^2. For a long time this subject was known only as a laboratory product. Within the past fifteen years the process of its manufacture bas been very much improved, and many industrial applications have been devised for its use; while to meet the increased demand, it is now prepared on a very large scale.

In 1850, M. Macquart, of Bonu, prepared bisulphide of carbon in large quantities. In 1840, the kilogramme (over 2 pounds) was sold in Paris at from 50 to 60 francs (ten to twelve dollars); but in 1850, M. Deis sold it at 8 francs, and since 1856 he has manufactured 500 kilogrammes daily, and now sells it at 50 centimes (9 cents) the kilogramme. Bisulphide of carbon can be produced by the direct combination of sulphur and carbon at a high temperature; also by the dccomposition of a certain number of organic compounds. In heating simply a mixture of sulphur and carbon, there is no combination, as the sulphur volatilizes before it has attained the temperature uccessary to tbe action; but when charcoal is heated to red heat, and the vapor of sulphur is passed over this incandescent mass, the carbou burns iu this vapor, producing bisulphide of carbon.

The earliest apparatus for the preparation of this compound consisted of a porcelain tube filled with fragmeuts of charcoal, and placed in an inclined position in the center of a laboratory furuace. The upper end of tbis tuba was closed by a stopper of clay and chalk, and the lower end was connected by a bended glass tube, with a bottle partly filled with watar. Whan the charcoal was made red hot, the stopper was taken out of the tube, and a piece of sulphur inserted; the sulphur, so placed, melted and run into the tube, where it came in contact with the red coal, was volatilized and combined with it, producing bisulphide of carbon, which, in a state of vapor, is condensed upon the water, and settles to the bottom by its specific gravity. This was the imperfect laboratory process employed for its early manufacture, which was on a small scale ouly. As already stated, this manufacture is now conducted on a very large scale, and the principle of the apparatus used is always the same, viz., that sulphur in vapor is always passed through coke or charcoal brought to a bright red heat, then condeusing the vapors of bisulphide of carbon as rapidly and completely as possibte.

The first improvement made for tbis preparation was the use of a large tubulated earthen retort to heat the coal. A tube of hard glass or porcelain was put through tha tubulatura of the retort, which was so constructed as to reach nearly to its bottom, for the introduction of aulphur. The neck of the retort was adapted to a condenser cooled with a stream of water, and communicating with a receiver, as already described. With this apparatus large quantities were obtainable. The various kiuds of apparatus now in use for the iudustrial manufacture of bisulphide of carboo ara actually constructed according to the same principle, and differ only in the form of the retort, the way of introducing the sulphur, and the different combinations of the condenser. It is impossible, without drawings, to give an intelligible description of tbe details of these various kinda of apparatus; still I will endeavor to give one or two of their most characteristic details.

M. Peroncel, who has introduced the manufacture of this substance on a very large scale, heats the coke in a large cast-iron cylinder, 2 metres (about 39½ incbes) high by 30 centimetres in diameter, placed vertically in the furnace. The tube for the introduction of sulphur is near the bottom of this cylinder. The uppar part of the cylinder is connected with an earthen jar, in whicb most of the bisulphide is condensed, and from which it runs into a closed vessel placed under the jar; the noncondensed vapors are conducted by a tube fitted to tha upper part of the eartben jar into a refrigerating coil, where they arc condensed. The coil is in connection with a closc receiver. This apparatus can produce nearly 100 kilogrammes of bisulpbide daily. The cast-iron cylinder is very quickly attacked and destroyed by the sulphurous vapor—it will seldom last longer than a week. The use of fire-clay cylinders, tha same as those employed by the gas manufacturers, may be considered an important progress in the improvement of this manufacture.

M. Gerard, of Grenelle, usea cast-iron cylinders two metres higb, of an elliptic section (diamater 1.40 metre). They are filled witb coke, and the sulphur is introduced by means of an inclined tube passing through the side of the furnace, and reaching uear the bottom of the cylinders. The sulphur vapor is thus obliged to pass through the whole of the red heated coke. Tbe vapors of bisulphide thus obtaioed, ara first conducted to a receiver, where the largest quantity is condensed; that which does not condense, passes to a refrigerator, composed of three large metallic cylinders, placed one above the other, and connecting with each other by tubes. The whole is surrounded by cold watcr. The vapors first pass into the lower cylinder, where immediately a large quautity condenses, the balance rising into the upper ones, run from there in the lower, from which by a tube they ara received in a close vessel.

This apparatus furuishes, in twenty-four hours, 200 litres (50 gallons) of impure bisulphide of carbon, weighing 248 kilogrammes, at a cost of 41 kilogrammes of coke, and 230 kilogrammes of sulphur. Loss about five per cent. of the crude materials employed.

Galy, Cazalat, and Huillard have patented, in England, a large cylindric oven, divided horizontally into two parts by a fire-clay grate. This is denominated a *calorifere*, as being the principal source of heat. The upper part of the oven is vaulted, and supports a low, vertical chimney, which can be closed perfectly by a damper. Around this chimney is a circular trough or reservoir, containing the sulphur which is kept liquid by the waste heat of the chimney. From this, by way of a faucet, sulphur is run as may bc dcsired. At the bottom of the lower part of the oven an opening is made sideways, to counect the tube conducting the vapors to the condensers. Tha coke is lighted in the lower part, which is gradually replaced when burnt out. The combustion is continued until the whole interior of the oven is at cherry-red. All the apertures are then closed, and according, as described above, the sulphur is run into the oven; the melted sulphur dripping on the fire-clay grate is instantaneously reduced to vapors, and passed through the red-heated coke; tbe vapors of bisulphide of carbon thus obtained pass to the condensers, where they liquify.

[To be Continued.]

Growth of Chicago.—By an estimate made near the close of last year, it is calculated that during 1865 nine thousand buildings were put up in Chicago. Six of them cost $100,000 each; forty others cost $30,000 each; and eight hundred were worth over $1,000 each. The total amount of capital employed during the year was six million dollars. The number of new churches was seven; schools, two, and public halls, four.

Pithole has now thirty producing wells, sixteen that have produced, but are now out of order. The daily yield, is 8,603 barrels, or six barrels per minute. At $6 per barrel, the present price of oil, it amounts to $51,648. The sum of $12,000 pays all the expenses, being a profit of $49,618 every twenty-four hours.

"Three thousand of the finest poems in tbe English language" are being collected, and will bc published in one volume, in London, for Christmas.

The Viceroy of Egypt's astronomer has discovered, by a course of astronomical calculations, that the great pyramids were built about 3,300 B. C. Bunsen thinks it was 3,400.

[Written for the Mining and Scientific Press.]

The Mines of Grass Valley and Nevada.

Nevada, Jan. 12, 1866.

Editors Press:—Since my last, I have been, to use a Western phrase, "circulating about" in the neighborhood of this place and Grass Valley, until the present snow-storm, "and its" attendant "slush" and discomfort, drove me in-doors, and I am no longer "current."

While thus unable to travel, it is probable that I cannot be better employed than in jotting down some notes of what I have seen and heard during the last two weeks, including, of course, notices of the leading mines and mills about Grass Valley and Nevada, some of which, though I shall be able to-day to give them but a passing notice, are "booked" for a second visit.

That I may be more fully understood, I will premise that I begin with the notes taken during a day spent among the mills and mines located to tbe south and southeast of Grass Valley, within a distance of three miles. Tha first of these that I encountered, and one of the oldest establishments in the district, is the

"Gold Hill Mill,"

Located one mile south of Grass Valley, and superintended by Mr. J. K. Edwards, a brother of Mr. Hannibal Edwards, superintendent of the Eureka mines, Summersville, Tuolumne county, and a fine specimen of an experienced and practical miner. This is a 20-stamp mill, driven by steam, the eogine used being of the "double-acting, condensing, working-beam pattern," so much in vogue years ago, and bearing the suggestive trade-mark of "James Watt & Co., Soho, England." As I stood by this fire-breathing monster, my mind was carried back to the days when, as a school-boy, it was my duty to explain the mysterious diagrams representing Watts' noequaled invention, a working model of which I had never seen until that day, and as I watched the movement of its complicated arrangement of rods and levers, I could not wonder at tha superstitious dread which the first engine must have inspired among the unsettled miners of Northern and Western England in the time of the great inventor.

The mill was employed at the time of my visit in crushing quartz from the Ione ledge, of which I shall speak more fully hereafter. A fine lot of quartz from the Illinois lode was also lying at hand, waiting its turn to be relieved of its precious charge.

Half a mile farther in the same direction brought me to the

"Sebastopol Mill,"

Mr. Ben. McCauley, superintendent, which was not running at the time. This is a 12-stamp custom mill, driven by steam, and appears to be thoroughly and perfectly constructed in every part.

Half a mile southeast of the Sebastopol, on Wolf Creek, is

"Larimer's Mill,"

Lately finished by Mr. Jno. W. Larimer, sole proprietor and manager. This is an 8-stamp water mill, and is employed, like the two last-mentioned, in crushing custom-rock. Both this mill and the Gold Hill at present use the old system of amalgamating in the batteries, and on copper plates placed in sluices below; but Mr. L. contemplates a visit to the Bay in a short time, for the purpose of choosing improved amalgamating apparatus, to be introduced into his mill.

A short distance further to the southward brought me to the

"Illinois Mine,"

The property of Messrs. Leech, Henderson, and some others whose names I have forgotten. The course of the ledge is east and west, with a dip to the southward of 40 degrees. Its thickness varies from six inches to four feet, the average thickness throughout being about two feet. It is situated in a granite formation, and consists of a light-colored, bluish gray quartz, carrying large quantities of sulphurets, and pleutifully specked with free gold, I was informed that tha rock from this mine, crushed at the Gold Hill mill, had, thus far, averaged fifty-two dollars per ton. Tha workings have reached a depth of 140 feet, and the word is, the vein is "still improving."

A short distance eastward from the Illinois, is

"The Lone Jack,"

Owned, in part, by Mr. C. T. Wheeler, of Sacramento. I did not obtain any statistics in regard to this mine, but was assured by the superintendent that it was "doing well, which was fully sustained by the appearance of tha quartz that was coming out of the mine.

About a mile from the Lone Jack, and three miles southeast from Grass Valley, is the

"Ione,"

Owned by Messrs. Hurst, Samuel F. Curtis, of the Savage mine, and Mr. Hunt, the present superintendent. Tbis mine haa been lately opened on ground purchased of the Empire company, and appears likely to soon rival the most famous mines of this district in richness and extent. The general course of tha lode is north and south, with a dip to the eastward of twenty-five degrees. The ledge is represented as having an average width of three feet, and I am assured by Mr. Hunt that the average yield has herctofore been $40 per ton. On meeting Mr. H. the following evening, he told me that they had that day taken out better quartz than ever before. He was sanguine that it would pay $100 per ton. The proprietors are preparing to put up a 10-stamp mill, with a capacity for twenty stamps, for whicb they expect the engine now doing the hoisting and pumping of the mine to furnish sufficient power, in addition to its present work.

Returning, I stopped at the

"Hartery,"

Owned by Messrs. McLaughlin and Loutzenheiser, of Grass Valley, and Mr. J. O. Keefe, of San Jose. As the superintendent was absent at the time, I was unable to obtain all the information I desired. The following facts I learned from Mr. Henderson, who is engaged in erecting the machinery for the hoisting works, pump, and mill, which the proprietors have in process of erection. The mine has been explored to a depth of 140 feet, and extensive drifts have been run, disclosing a ledge from one to two feet in thickness, and of such richness, that the proprietors feel warranted in erecting an 8-stamp mill, which is now being built.

On Monday I left Grass Valley for this place, and during the evening formed the acquaintance of Mr. S. P. Leeds, superintendent of the New York and Grass Valley Mining company, with whom, and Mr. Fenton, of Summit City, I visited the company's mine and mill at Gold Flat, three-fourths of a mile from the city, and known as the

"Sneath and Clay,"

From the names of its former owners, from whom it was purchased by the New York and Grass Valley Mining company. The vein is situated in a primitive formation, the wall being of syenite, or, as it has here been called, granite, and is of varying width, averaging probably twenty inches. The strike of the ledge is north, twelve degrees east, and it dips to the eastward at an angle of twenty-three degrees. The mine is opened to a depth of 350 feet, by an incline, and is worked on three different levels, at depths of 212, 272 and 350 feet, on all of which extensive drifts have been run, and valuable ore taken out. The quartz pays from $18 to $25 per ton, and can certainly be worked with profit in the mill, which stands convenient to the mine, so that the ora is run on cars, from the top of the incline, direct to the batteries. The mill has a capacity of twelve stamps. Amalgamation of the gold in the batteries, by means of copper plates, is the principal mode of saving it, after which the heavier sands are caught on blankets and ground in Chile mills, and, last of all, the sulphurets are concentrated by means of shaking tables, and saved.

After passing through and examining the mine and mill, we proceeded to the

"Union Mine,"

Situated three and a half miles southeast of Nevada, in a granite formation, the walls of tha vein being of diorite, resembling in appearance the "Angel Island Granite" of San Francisco. The vein varies from a few inches to four or five feet in thickness, averaging, probably, two and a half or three feet. The course of the vein is nearly or quite north and south, with a pitch to tha eastward of forty-three degrees. Near tbe mine is a 5-stamp mill, also the property of the company, in which some of the ore is now being worked, paying, Mr. Leeds informed me, an average of about thirty dollars per ton. Tha mine was formerly worked through tunnels, driven in upon the vein from the ravine to the southward, but Mr. Leeds is opening it through a splendid incline, which he calls his "Excelsior Shaft," and it is one he may well be proud of. Five feet by fifteen in the clear, and supported by timbers sawn from the heart of the spruce, it furnishes a convenient, roomy, and durable means of access to all parts of the mina. Thia shaft has

now reached a depth of 240 feet, and levels have been opened, one of which we explored, finding the vein strong and well defined throughout. I cannot drop this subject without dropping just here a hint to future travelers, whose interest and inclination lead them to desire the acquaintance of the "miners of Nevada city,"—it is just step at the Union Hotel. Messrs. Eaton and Williamson are both deeply interested in mining themselves, and generally manage to keep around them some, at least, of the best practical miners in the country. For my own part, I shall never forget the evenings spent here, in company with Messrs. Eaton, Hagadorn, Leeds, Fenton and others, and never before did I so fully realize the sterling worth of character and sociability of the true California miner.

On Wednesday morning I took leave of the very agreeable company at the Union, and returned to Grass Valley. Of my further experience, more next week.

Yours wanderingly, D.

[Written for the Mining and Scientific Press.]

Blind Spring District, Mono County.

BLIND SPRING DISTRICT,
PARTZWICK, December 29, 1865.

MESSRS. EDITORS:—But little has been mentioned in the public journals concerning the mines here. This silence has been caused principally by the desire of those interested, to be first certain of the permanency and wealth of the ledges before giving much publicity to the operations going on. The Sierra Blanca Silver Mining company, an incorporation formed in New York, and consisting of some of the wealthiest merchants there, the President of which is S. E. Low, Esq., dispatched Dr. A. F. W. Partz, a practical and well-experienced mineralogist and assayer, to this section of the country, to examine its mineral resources and report thereon. After a thorough investigation, and testing the rock by every known process, his report was favorable. The President of the company visited it personally, and the result was the purchase of a number of the best ledges at remunerative prices to the prospector. Among these, the Elmira, Cherokee, Jupiter, and Vulcan are considered the best. From the first-mentioned, a shipment of ore sent to New York has created the liveliest excitement there, and has drawn the attention of capitalists to this portion of the land of sage brush and silver. In addition to their investment in the mines, the company also bought the entire Hot Spring Valley, a tract of land embracing about six hundred acres, situated in the immediate vicinity of their leads. At the head of the valley is the spring from whence it takes its name. With a capacity sufficient for any number of mills, its value is almost incalculable.

In the immediate neighborhood are large tracts of wood-land, several of which are owned by the company, and building material, in the shape of beautiful and easily-dressed stone, exists in large quantities; with these, and many other advantages, the purchase was a most judicious one. Already the site for a town has been selected, and building is going on rapidly. An excellent hotel, stable, saloons, and a store have been completed, besides the company's offices and the superintendent's residence. They have their reduction works nearly finished, and are fully developing their many ledges. In addition to these operations, many others are hard at work. The Diana lead, owned by Williams, Wickland, LaRue and others, is, without exaggeration, one of the richest on the Pacific slope.

With a little 4-stamp mill, capable of crushing only about 1,500 pounds per twenty-four hours, they take out on an average sixteen pounds of bullion a day, worth about eight dollars a pound. Their tailings show from assay very nearly as much, so imperfect is the manner of working the rock. The Merrimac, Mary Ann, Everett, Camanche, I X L, Juno, Chieftain, and a host of others, are proving very rich as they are gone down on. The best proof of the success of this district, is the fact that there is not a man who desires work that is out of employment—either working for himself or for wages, which are of the highest ruling rates, and promptly paid in gold.

A company, incorporated under the laws of Pennsylvania, have purchased the Cornucopia lode. This company consists of some of the largest bankers and merchants in Philadelphia. With a capital of $1,000,000, and under the supervision of their present competent officers, it will not be long before their mine will rank as high as any on the Comstock ledge. They have just commenced operations, and will proceed in a short time to erect their works.

It was from this mine that the rock was taken which received the first premium at the late State Fair. The ore here from the various ledges exhibits a strong resemblance, containing carbonate of copper and lead, argentiferous galena, native silver, and hematite.

From Silver Peak, which is situated some thirty miles from this place, we hear the same glad tidings. Martin's mill, of ten stamps, is taking out from $1,500 to $2,000 per day, and when the new one of forty stamps is completed, of course the yield will be immense.

Montgomery, laying about seven miles off, is not doing so well. This is owing to the fact of the mines, as a general thing, being in the hands of parties who have not the necessary capital to work them. That it contains some remarkably rich ledges there can be no doubt. Here is located the Osceola, 1,100 pounds of the rock from which yielded in San Francisco $4,200. The Bowman & Mitchell, which has been constantly worked, shows a ledge four feet in width—nearly two feet of it will pay over $150 per ton.

The Philadelphia, Mountain Queen, and Brewster have also been sufficiently developed to prove their value, while of the Winnemucca, Uncle Abe, Rhode Island, and a score of others, there is no doubt. Several small mills have been erected, but as the rock is of a peculiar character, they do not succeed in saving more than a small proportion of the precious metals.

All this district needs is capital, and men who understand how to work the rock, to make it rank among the best in the country.

My letter is already growing too long. Should you desire it, at some future time, I will send you an account of the districts below this place, as well as keeping your readers posted on any new discoveries here. X.

[Written for the Mining and Scientific Press.]

Markleeville Correspondence.

MARKLEVILLE, Jan. 1st, 1866.

MESSRS EDITORS: I have been waiting for some time past for the spirit to move me, before writing for the PRESS; but as the spirit is not very active just now, owing, in a great measure, to the extreme cold weather. I have concluded to write any way, and let the spirit move at some other time.

We have had some very cold weather in this part of the country, for several weeks past. The thermometer has several times been as low as 10° below zero. We have had several snow storms, and the mountains are all covered over, and look as if they had put on their winter robes, and crusted over, as if to guard against the fierce winds of winter. The valleys and lowlands have been covered several times, but a few warm days have melted off the snow, and now it has nearly all disappeared from off the level ground.

The old year has passed away, but never to be forgotten. Some of the most wonderful events that have ever transpired since the existence of our Government, are connected with the past year, and will be handed down in history to the latest time.

The New Year has made its appearance, and the cheering rays of Old Sol bespeak a brighter future. The weather has become settled and clear, and the prospects are that we shall have an open winter and an early spring.

OUR MINING INTERESTS

Are looking up, and attracting considerable attention from abroad. Several companies controlling Eastern capital, have already commenced operations in our midst, and many other Eastern companies are preparing to take hold early in the spring. From all appearances we shall have good and lively times here before the close of the present year, whether we shall have a change in the currency of our State or not.

THE ACTIVE GOLD AND SILVER MINING COMPANY

Is incorporated in New York, and have sent out mill machinery, under the charge of their Superintendent, T. W. Collins, who is now making all the necessary arrangements for erecting a mill at Mount Bullion, five miles above this place, early in the spring. This company are going to reduce ores on the desulphurizing and amalgamating process, and are confident that they will have no trouble in reducing and successfully working, the Morning Star rock; and that too, at a very reduced price, so that the copper contained in the rock will pay for all costs of mining and milling. It is estimated that by this process, it will only require one cord of wood to desulphurize one hundred tons of ore. If this company is successful with their new patent, there is no doubt but that many claims in this region can be made to pay which are now looked upon as almost worthless, and that the company will be successful, seems to be almost a foregone conclusion. Successful tests have been made, and the company doubtless know best what they are about; and certainly would not go to such an enormous expense merely to experiment. Mr. Collins, the Superintendent, is now below and intends getting his machinery over the mountains this winter.

THE PACIFIC MINING AND EXPLORATION COMPANY

Is incorporated in London, and having interests in Alpine county, sent their agent, Captain James Barratt, all the way from England to see these mines; and he having first visited the Virginia, Reese River and Humboldt mines, made his appearance among us last week; and was much pleased with our prospects. He has since gone away to make arrangements for operating here next spring.

THE ST. HELENA COMPANY

Are operating in Alpine District, and have capital from Illinois, to back them up. They have been sinking a shaft, and now, after having sunk about one hundred feet beside their ledge, are at present drifting so as to cut the ledge. The rock from this claim looks well, and they are expecting to get pay ore at the present depth.

THE MORNING STAR COMPANY

Have been sinking a mammoth shaft, which is now down and connects with the works below. The shaft is four by nine feet in the clear, and heavily planked. This is destined to be one of the best mines on the Pacific coast, and when the Active company get under way next spring, there will be no trouble but what this claim will pay a dividend from the word "go."

THE LEVIATHAN COMPANY

Is also in Mogul District, and have recently cut their ledge with a tunnel about 250 feet below the surface. They have not yet got through their ledge, but the rock assays $270 per ton in gold and silver, and about twenty per cent. in copper. Up to the last news from the claim, they had gone into the ledge only about four feet.

THE LUMBERING BUSINESS

Continues to be an important business in Alpine county. It was estimated that 14,000,000 of feet of lumber, including saw-logs, mining timbers, and fire-wood, were run down the Carson last season to supply the Virginia and Gold Hill market, and the "regions beyond," and the lumbermen are going ahead this winter with the same energy, preparatory to the drive next summer. About 7,000 cords of wood are being got ready just above this place, to be driven out of the Middle Fork of the Carson (which passes through this town), and destined for Empire City, to supply, in part, the same market.

AN ENTERPRISE

Is now on foot to build a flume from Cary's mills, a little town six miles below this place to take water from the Carson Cañon, for the purpose of running fire-wood to Empire City. A preliminary survey has been made, and the distance is about thirty-one miles. The flume will pass through the farming region of Carson Valley, thereby proving a benefit to the farmers for irrigating purposes, besides being a grand highway for all persons living along the route of the flume, for conveying sawed lumber and fire-wood. The estimated cost of this flume is about $2,500 per mile, and when completed, is bound to be a paying institution.

THE PLACERVILLE RAILROAD,

If ever it crosses the Sierras, is bound to come through Alpine county, as there is no pass to the north over which they can pass. So you see, with all our facilities, "everything looks lovely, and the goose hangs high."

SIRROM.

PROGRESS OF OAKLAND.—The Oakland *News* says that a large number of fine residences will be erected there during the approaching spring and summer; and in six months from this date that place is to be lighted by gas, and supplied with water from reservoirs at the foot-hills.

PROGRESS IN EGYPT.—According to the *Phare de la Loire*, the Viceroy of Egypt has given to the American mission at Cairo a block of houses worth 200,000f. His Highness is also said to have given the missionaries free passes for the railways, and to have decided that religious journals and books shall not be subject to any tax.

THE whole distance, by the usually traveled roads, from San Francisco to New York, is 3,584 miles.

COPPER INTERESTS—THE SMELTING WORKS. We have frequently referred to the copper mines in the southern part of this county and Fresno. Three years ago, when they were discovered, there was quite a mining excitement, and claims innumerable were located and recorded. For a time there was considerable work done, but many of those enlisted in the business were not in a condition to furnish the means requisite to carrying it on, and out of scores of companies not more than a dozen were able to collect assessments, and gradually, for want of means, most of them ceased operations. During the past year the firm of Henry & Co., composed of citizens of this place, determined to make a new effort towards developing these copper mines. Before commencing any work, they entered into contracts with the owners of some of the best veins, agreeing to do certain work, and become equal owners. After this, the smelting works were erected near James' ranch, and the result of the enterprise, under the superintendance of Mr. Huskell, we have published. With but very little machinery, labor and expense, Mr. H. smelted out several tons of nearly pure copper. Shares at once went up, and those that cost a thousand dollars sold readily for twenty-five hundred. Since then there has been considerable speculation—many have visited that region and prospected the veins. Some have invested—all have been satisfied that it is a rich copper country. A change in the arrangement of the affairs of Henry & Co., caused for a time a delay in the business. They were burnt out in October, and their new machinery failed to work. Another change, caused by the selling out of some, and the coming in of new members, and Mr. Desormeaux, an experienced copper miner, took charge of the business. The latest information from the place is, that he is succeeding, to the satisfaction of all, in smelting the ore, being able to run out one hundred pounds per hour, at a cost trifling compared with the profits. The ore is easily taken out, there being thousands of tons on the surface and within fifty feet of it, and it is easily worked. It requires but one process to reduce it, while the ore at Copperopolis requires three. In the meantime, Mr. Haskell, at Buchanan Hollow, five miles south of the works of Henry & Co., has put up new smelting works, and is doing a good business. We believe that in less than two years from now this copper district will be one of the liveliest, as it is now richest in the State.—*Mariposa Gazette.*

POPULATION MOVEMENT.—The *Call* says that during the year 1865, there arrived at the port of San Francisco, by way of the sea, 25,784 passengers, while for the same period 29,776 left by the same way. The State lost during the year, by emigration, 3,992 of its population. There were 3,864 more people went to the East, by steamer, than arrived from that region; 1,825 more went to Victoria and Portland than came from those ports. China sent 799 more of its population to us than we sent away. The white population has fallen off over one per cent., and the Chinese population increased two per cent. by immigration.

SIZE OF THE WEST.—The La Crosse *Democrat* says: Illinois would make forty such States as Rhode Island, and Minnesota sixty. Missouri is larger than all New England. Ohio exceeds either Ireland or Scotland, or Portugal; and equals Belgium, Scotland and Switzerland. Missouri is more than half as large as Italy, and larger than Denmark, Holland, Belgium and Switzerland. Missouri and Illinois are larger than England, Scotland, Ireland and Wales.

THE interminable divorce case of Edwin Forrest, the actor, has assumed a novel shape. He appeals to the Supreme Court of the United States to set aside the action of the New York Supreme Court, which granted his wife a divorce, his grounds being that the marriage occurred in Great Britian, and the courts of this country have no business to meddle with it.

KEEP IN GOOD HUMOR.—It is not great calamities that embitter existence; it is the petty vexations, the small jealousies, the little disappointments, the minor miseries, that make the heart heavy and the temper sour. Don't let them. Anger is a pure waste of vitality; it is always disgraceful, except in some very rare cases, when it is kindled by seeing wrong done to another, and even then noble rage seldom mends the matter.

No two human beings were ever alike in body or mind. In other words, Nature has been engaged in making men and women six thousand years without ever making one that she thought it worth while to repeat.

A RECENT tornado in Italy blew a train of cars into the Adriatic Sea, and drowned a number of passengers.

RICH.—The Hanseom Copper Mine, in Del Norte county, is said to be one of the richest copper lodes on this coast.—*Sac. Union.*

FROM THE OFFICIAL REPORTS

Of the Fifth Industrial Exhibition

Of the Mechanics' Institute, San Francisco, 1865.

[Just Issued—Mining and Scientific Press Book and Job Office.]

[*Continued from Page* 37.]

ON ESSENTIAL OIL EXTRACTOR.

Committee:

I. ROWELL, M. D., R. BEVERLY COLE, M. D., WM. H. KEITH.

Essential Oil Extractor, exhibited by V. Squarza, patentee. This is a machine of California invention, well worthy of consideration, from the fact that it extracts the oil from lemons, oranges and other fruits, in great purity and without injury to the fruit.

The great demand for these oils will, no doubt, be much more promptly and cheaply met when this invention shall have found its way into general use. An inspection of this machine exhibits distinctly the thoroughness of Mr. Squarza's knowledge of the subject and his great ingenuity in its practical application. This being undeniably a Californian invention of great promise, the Committee conceive it worthy, in an eminent degree, of special consideration.

DESCRIPTION OF OIL EXTRACTOR.—The body or frame work of this machine consists of several compartments, the one within another, with spaces between. These compartments may be described as hexagonal boxes, equal in length but differing in diameter. The whole is arranged to be suspended on pivots, and rotated by a power which operates upon an axis perpendicular to the hexagonal sides of the machine. The innermost and smallest of the two boxes or compartments has an orifice at its smaller end, by which the fruit to be used is passed into the machine by means of a feeding pipe. The diameter of the first and interior box increases towards the extremity opposite that where the fruit enters, so that when the concentric, hexagonal boxes are rotated, (being hung upon a horizontal axis), there will be a gradual downward inclination of the under-side of the box from the end where the fruit is admitted to the opposite end. This inclination is sufficient to cause the fruit to find its way—as the machine is slowly rotated—to the larger end, where there is an apperture opening into the *second* box or compartment, exterior to the first. This second compartment has its greatest diameter at the end opposite that at which it receives the fruit from the first and, consequently, at the end where the first compartment has its *least* diameter. Thus, the fruit, passing from the larger end of the innermost box into the smaller end of the second one, is carried by the inclination of the latter, towards the larger end, being the same from which it started in the first. Here it finds its way through another apperture into the smaller end of the third and outer compartment, which, in its turn, enlarges in the opposite direction, causing the fruit to roll once more towards the larger end. Each of the boxes or compartments has its inner side covered with projecting steel points, set at regular intervals. By means of a double cover to the boxes, the steel points being set in the outer cover and projecting through apperatures in the inner one, the length to which the points protrude on the inside of the boxes can be increased or diminished at pleasure, being regulated by screws, which separate or draw together the double covers, as may be desired. The steel points are designed to perforate the rind of the fruit and thoroughly break up the cells containing the essential oil, which is thus set free. The mode in which the machine operates is as follows: The fruit passing into the innermost compartment, while the machine is slowly revolving, rolls over the steel points and gradually reaches the larger end, where it passes into the sacred compartment and then, by a reverse process reaches the third, where it again rolls to the larger end. Here there is an arrangement of small boxes, opening directly opposite a passage into the inner compartment, by which the fruit is caught and thrown back into the said inner compartment, so that the process can be repeated as often as may be necessary. The motion of the fruit over the steel points perforate the rind throughout its whole extent, and more thoroughly disintegrates the cells than can be done by any other process in use. When it is supposed that the fruit has been long enough in the machine to have all the essential oil extracted, a sliding door near the larger end of the outer box or compartment is opened, through which the fruit gradually falls into a receptacle prepared for it.—Awarded a silver medal.

ON WINES, LIQUORS, AND MALT BEVERAGES.

The extent of the grape culture in California, at the present time, is said to exceed that of all the rest of the States combined; and the production of wine and brandy, especially that of the former, is increasing so rapidly that it bids fair soon to drive all foreign competition from this market. In almost all parts of the State the soil is suitable for the successful cultivation of the vine, while, for the maturing of the fruit and making of wine, the climate has no superior.

Under the auspices of the Catholic missionaries who first settled in California, the vine and olives of Spain were introduced at the various missions, and the former soon became a common fruit throughout the country, wherever the white man made his home. Comparatively large quantities of wine and brandy were made at the various missions, but the demand being limited to the domestic consumption, no encouragement, as in commercial countries, stimulated the production beyond the ordinary wants of the coast. With the discovery of gold in 1848, the great influx of white population rapidly increased the demand for wine, and enhanced its value as a product so that the vineyards then planted became exceedingly profitable to their owners, who, thus encouraged, engaged still more largely in the cultivation of the grape. As the wine won favor among consumers, the new settlers in the State became aware of its great value as a product, and soon citizens, natives of all countries, were interested in grape culture, until, at the present time, the vines producing fruit number many millions, soon to be doubled by others now planted, but not yet in a bearing state. Next to the raising of small grain for food purposes, wine-making is now the most profitable agricultural resource we possess, and unless a large accession of population, engaged in other agricultural pursuits, should soon be made, the increase in the number of bearing vines and their fruit, will make it take the lead among the products of the State. Under these circumstances, the exportation of wines and brandies to the Atlantic States, and other markets, must eventually become very large, and it is expected that the quality of both shall be of such excellence and purity as to defy competition from abroad.

The samples of wines and brandies in the Fair were by no means of that extent that the importance of the interest called for, and it is to be hoped that, when another similar opportunity offers, wine makers, generally, will find it to their interest to make such a display of their vintages to the public as shall properly represent so vast and growing an interest of the State. To make up, however, as it were, for the lack in the number of samples, the wines exhibited this year were, with very few exceptions, superior in quality, as a collection, to any before exhibited.

ON WINES, CORDIALS, ETC.

Committee:

J. J. HARKNESS, S. P. CHRISTY, JAMES IRWIN.

Tokay Wine, exhibited by John Sweet, was awarded a first premium.

Port Wine, exhibited by James McCaffrey, was awarded a first premium.

White Wine, exhibited by the "United Anaheim Association,"—Awarded a first premium.

Red Wine, exhibited by Isaac B———, was awarded a first premium.

Pure Juice of the Grape, exhibited by S. Brannan, was awarded a first premium.

Madeira Wine, exhibited by Mathew Keller, was awarded a first premium.

Sherry Wine, exhibited by Mathew Keller, was awarded a first premium.

Angelica Wine, exhibited by B. D. Wilson & Son, was awarded a first premium.

Burgundy Wine, exhibited by B. D. Wilson & Son, was awarded a first premium.

Wine Bitters, exhibited by Mathew Keller, was awarded a first premium.

Whisky Bitters, exhibited by I. D. Thompson, was awarded a first premium.

California Brandy, by B. D. Wilson & Son.—Awarded a first premium.

In awarding premiums to the above, the Committee would especially recommend the producer of port wine for furnishing a remarkably superior quality of wine.

ON LIQUORS, ALE, BEER, AND CIDER.

Committee:

S. P. CHRISTIE, G. J. BYRNE, JAMES IRWIN, P. J. O'CONNOR.

The Committee, having examined the various samples of Bourbon and rye whiskies exhibited in the Fair, award the first premium to I. D. Thompson, for the best Bourbon whisky, known as the "lily" brand.

The Committee also award a first premium to J. Sajous, for the best California brewed "half-and-half."

ON COMPOUNDS AND CALIFORNIA INVENTIONS.

Committee:

I. ROWELL, M. D., R. BEVERLY COLE, M. D., WM. H. KEITH.

The liquors, punches, tonic bitters, cordials, &c., prepared by V. Squarza, are, without, exception, the finest article in their line the Committee have ever examined. All of Mr. Squarza's preparations have these great merits over other compounds of a similar character:

1st. That none but the best and purest liquors are used.

2d. That no sugar, syrup, or sweetening principle is ever used, except that obtained by the maceration of sweet fruits, hence the nutricious principles contained in the fruits are also imparted to the "punches."

3d. That the flavoring materials are also obtained by macerating the various fruits, flowers, plants, and herbs which contain them, instead of using the ordinary expressed essential oils.

The great skill of Mr. Squarza consists in his ability to blend harmoniously, and in due proportion, the various materials used, so that there are none wanting and none in excess. Some of his preparations are medicinal, and deserve especial and favorable mention.

"*Selene*," a cordial, as its name would indicate, is a ladies' drink, and, no doubt, will be found as beneficial as it is agreeable.

"*Aurora*" is a most delightful tonic bitter, infinitely more agreeable and healthy than those villainous compounds usually taken as an appetizer in the morning.

The "Raspberry Cordial" contains the astringent principle of that plant in a marked degree, while it has all the agreeable flavor of the fresh, ripe fruit. It is an excellent article for the summer complaints of children.

The "Tea," "Coffee," "Cocoa," "Anti-Divorce," "Ladies' Pleasure," "Ladies' Tears," and "Strawberry Cordial" are all most delightful beverages, from which it would be difficult to select one in preference to another.

The harmonious blending of colors please the eye; the scientific distillation and admixture of the perfumes of sweet flowers please the sense of smell; and the harmonized sounds of music fall upon the ear and delight the sense of hearing. The same law holds good in regard to a combination of different flavors to please the palate, and Mr. Squarza has, doubtless, struck an octave higher than any one else in his playing upon the "organ of taste." The Committee, in view of these several facts, feel it incumbent upon them to commend the claim of these preparations exhibited by Mr. V. Squarza, and, believing them to be the best articles of their kind extant, have no hesitation in recommending them for the highest prize.—Awarded a diploma.

ON SILK WORMS AND THE CULTURE OF SILK.

Committee:

HENRY F. WILLIAMS, SAMUEL TYLER.

The Committee on these subjects have endeavored to perform the duty designated, but regret their inability to do full justice to the important trust confided to them.

Their especial attention was called to the exhibition of silk-worms and cocoons, by L. Prevost of San José, who has, in the opinion of the Committee, most successfully demonstrated that California is one of the best, if not the very best silk producing country in the world. They have learned to their own satisfaction, not only from those who know something of Mr. Prevost's operations in this line, but, also, from personal observation during a visit to his cocoonery in San José, that Mr. Prevost is justly deserving of the highest premium the Institute can award him, for the commendable zeal and perseverance he has exhibited under the greatest difficulties, in successfully inaugurating this new branch of industry in our State. The demand, both for silk and silk-worm eggs, is so extensive and constantly increasing, that the business cannot be overdone, but its successful prosecution must, in time, give employment to many thousands of our people, with a net profit of millions of dollars annually.

Mr. Prevost's simple narrative of his early efforts and drawbacks was exceedingly interesting to the Committee, and they induced him to commit to writing some of the leading facts, together with some remarks by Mr. Hentsch, which are hereby submitted, in the hope that they may not be lost or forgotten.

The Committee deem themselves not over sanguine of the great results to flow from the introduction of this important branch of industry into our State, when they hope and believe the day is not far distant when a gratified people will, through their Legislature, offer some public recognition of the services rendered by Mr. Prevost.—Awarded a gold medal.

FACTS ON SILK IN CALIFORNIA.—BY L. PREVOST.

After I had passed a summer in California, I came to the conclusion that it was one of the very best countries in the world for raising silk, as well as wine, etc., etc., but the difficulty was to obtain, first, mulberry trees, and, afterwards, silk-worm eggs. In 1863 or '64. I had occasion to meet with Mr. Henry Hentsch, who had the same opinion of our beautiful climate, and its adaptability for silk cultivation, and he, himself, began a conversation on that important subject. From that conversation was born the culture of silk in California. Mr. Hentsch imported the mulberry seed from France, from which I raised a number of fine mulberry trees. Mr. Hentsch was informed as soon as the trees were of some size, and he made arrangements to import silk-worm eggs from China. They arrived here dead—it was impossible to hatch one of them. The following year he imported another lot from the same place, and with the same result. After this second attempt I was a little discouraged, finding that it was impossible to import the eggs in good condition, and expecting to have no use for my mulberry trees, I had the most of them destroyed, keeping only a few.

The third year, Mr. Hentsch imported eggs again from the same place, and at the same time, from France. I was then very sorry to have destroyed so many of my mulberry trees, as the eggs from France proved to be in good condition, and hatched out very well. At that time I had a friend here, Mr. Miller, who was a competent silk cultivator, to whom I showed the eggs. He pronounced them good, and also agreed, for the first time, to help me, which he did. The worms did well, and produced fine cocoons of silk of the first quality, as I can prove by certificates from the two highest silk societies in Europe, to whom silk and silk cocoons had been sent to be tested.

Up to this time we have not been able to discover any indications of disease, which is most extraordinary; it must be the good influence of the climate of California operating as we expected. As I had no other room for the purpose, I have been obliged to raise the worms in a green house, which was extremely hot in daytime, and nearly freezing at night. Under such unfavorable circumstances, not one worm would have lived in Europe. Now, any thinking man can judge what success we might reasonably expect if we had a proper room in which to raise them.

The first year I made silk was in 1860. I sent boquets of cocoons and silk to about every fair all over our State; they attracted the attention of visitors, but I received no encouragement. On the contrary, I heard many say that this culture could not be pursued profitably in California, on account of the *high price of labor*. I was aware of the apparent truth of this before I attempted the production of silk, but I thought for this kind of labor Chinese might be employed, who are used to the work, and, besides that, I knew that the price for *buying* three or four acres of land here does not exceed the price of *renting one* acre in Europe, where silk is raised in large quantities. This advantage, I expected, would more than compensate for the difference between the price of labor in Europe, and Chinese labor here, because the silk grower in Europe has to deduct from his profits the rent of the land every year. But the question of labor is now fully settled, and silk can be raised in California with great profit. Calculating on the great superiority of our climate, I thought to try to take advantage of it, and I have succeeded in simplifying that culture even beyond my expectation. One man here can raise and take care of as many

silk-worms as eight men can do in Europe. As my mode of culture is adapted to the climate of California, I propose to call it *California Silk Culture*. It could by no means be employed either in France or Italy, where they have rains during the season of feeding, but might be used in any place where there is a climate similar to this.

The culture of silk in California is so simple that any one may understand it. It is easy work, and can be done by quite young persons, either male or female; the ladies, therefore, may have the pleasure of raising their own silk.

It will be a great pleasure to me to have contributed something towards the retention in our State of the millions of dollars that are paid out for the single importation of silk. Not only may we raise silk for our own consumption, but we can, in California, raise silk for the world, and export it. This article must increase in value; this year it is increased twenty-five per cent in price in Europe. It is an article in which we need not fear competition; we need not be afraid to see our neighbor raising it, because, if nearly everybody was raising it all over the State, it would not lower the price two cents per pound. This year, when the price of fruits is exceedingly low, allows us to show the advantage of the mulberry over fruit trees as the fruit must all be consumed within a certain time or it is lost, which is very far from being the case with the silk.

I have been engaged in my experiments in California silk culture three years, and this year raised over one hundred thousand cocoons.

Several gentlemen have made large plantations, so as to pursue this business hereafter on a larger scale. Among them I can name Mr. A. Packard, and also Mr. Q. Goux, of Santa Barbara, who have planted three thousand mulberry trees, and Mr. Glessing of San Joaquin Valley, whose plantation dates from last year.

Besides what may be done with the silk, we have a constant demand for eggs by the European culturists, as there they have the disease, and to insure a crop have to get their eggs from countries where the disease does not prevail. By not using sound eggs their crop is very much exposed; but, besides all that, and all they can do, in their best years their losses are generally twenty-five per cent, sometimes fifty per cent, and, in very bad years, as high as seventy-five per cent. Here we suffer none of these losses, and, as there is nothing to cause disease, every worm makes a cocoon. This also merits some reflection and consideration in favor of the superiority of our climate. It would be quite too long to enumerate everything in our favor, but I cannot help remarking that the principal point is that the mulberry tree grows here most luxuriantly, and I believe, also, that our virgin soil produces leaves of the best quality. In order that every one may be able to raise his own mulberry trees, I have published a treatise on the culture of that tree, both by seeds and cuttings, in the "California Farmer," and also in the French paper. It is calculated that an ounce of silk worm eggs contains forty thousand; I have produced several millions of eggs this season, and they were all sold at the rate of ten dollars per ounce, to be sent to France, and those for years to come are engaged for the same house. If I had them by hundreds of pounds I could sell them immediately. The eggs are in great demand, also, for Mexico; I had an order for that country for 500 ounces, but, of course, was unable to fill it. The largest order I had was for *one hundred pounds*, for Italy, and when I received that order I had only three ounces to sell. All this shows that in the future, besides supplying a large export demand for silk, we will also have to export largely of eggs.

The variety of mulberry to cultivate to obtain the best quality of silk is the white mulberry (*morus alba*), and its varieties, particularly the *moretti*. As to the *multicaulis*, I would recommend it only when the worms are very young, but not afterwards. The feeding of the worms continues only thirty-two or thirty-four days when they make their cocoons, and twelve days after that they come out butterflies, and lay their eggs for the following year. They have to be kept in a cool, dry cellar to prevent them from hatching.

Each female is expected to lay about three hundred eggs. Three hundred good cocoons weigh about one pound, and an ounce of eggs can produce one hundred and sixty-five pounds of cocoons; twenty-eight ounces of selected cocoons give two ounces of eggs.

REMARKS OF MR. HENRY HENTSCH.

The memorandum of Mr. Prevost contains valuable and correct information about California silk culture. The main point on which the report must attract the attention of the community is this, that California has one of the best, if not the very best climate in the world for producing silk successfully, on account of the absence of rains and storms during the months of May, June, and July, which, prevailing in Europe, kill millions and millions of silk-worms annually.

The second point is, that it does not require any capital—or, at least, very little—merely the purchase of the mulberry trees, which may be planted around the farms, cottages, and country residences.

The shade of the mulberry tree is as good as the shade of the cotton-wood tree, and the fruit is very good for poultry. When the trees have grown up, the children and women may start in the silk trade, as it requires only the labor of gathering leaves to feed the worms, and that occupation takes only six weeks. It would be useless to go into further detail, as the practice is ten times more valuable than the theory. There are in California a great number of Italians and Frenchmen who understand the silk raising business, and it will be very easy to have information and directions when wanted.

The point to be first attended to is the planting of mulberry trees, which involves but a trifling expense for the present, and may prove of very great value in a few years.

ON AGRICULTURAL AND HORTICULTURAL PRODUCTS.

Committee:

J. A. HOBART, C. W. HAM.

The following awards were made by the Committee:

D. E. Hough, Oakland, for the largest display of fruits, consisting of fifty-three varieties of apples and one hundred and eight varieties of pears, and a variety of plums, crab apples, etc.—Awarded a diploma.

Dan. L. Perkins, Oakland, for his fine assortment of California grown seeds and excellent display of fruit.—Awarded a silver medal.

F. Despois, for his exhibition of thirty-three varieties of fine grapes.—Awarded a first premium.

Matthew Keller, for exhibition of four bales California grown tobacco and three cotton plants.—Awarded a certificate of merit. Mr. Keller is an applicant for the State bounty of $1,000 offered for the first one hundred bales of cotton grown in California by one person, and the samples exhibited were from a patch of 110 acres grown by him near Los Angeles. Mr. Keller was awarded a gold medal by the Institute for his enterprise in striving to secure the above named bounty from the State.

Jared Runyon, Sacramento River Ranch, exhibited five plates of apples and eleven plates of pears of magnificent appearance.

F. Brown, Onisbo, Sacramento river, exhibited twenty-five Gloria Mundi apples, the whole weighing thirty pounds.

B. N. Bugbey, Natoma Valley, El Dorado County, for a box of California raisins, cured in 1864.—Awarded a diploma. The Exhibition being held in August, was too early in the season to admit of Mr. Bugbey exhibiting raisins of this year's curing. The sample exhibited of 1864 curing was in good order, and showed by its admirable keeping qualities that California might, not only supply the home demand, but could produce large quantities for export, whenever circumstances shall warrant an extension of the business in that direction. Mr. Bugbey will make some 10,000 pounds of raisins this season.

R. B. Woodward, exhibits five bunches of Black Hamburg grapes, of superior excellence, grown under glass, at the Mission Dolores, and twenty-nine plates of pears, grown at Oak Knoll, Napa County.

Simeon Statas, Sacramento river, for a fine display of hops on one vine, was awarded a certificate of merit.

Daniel Flint, Sacramento, exhibited three extraordinarily large bunches of hop flowers.

J. G. Dow, Russian River Valley, exhibited corn stalks fourteen feet high, and loaded with ears of corn.

C. H. F. Hildebrand, exhibited rhubarb, lettuce and potatoes grown from imported seed.

C. W. Weston, Pacific Market, exhibited a basket of samples of fruit, beautifully arranged.

E. F. Peck, Watsonville, Santa Cruz County, and J. Runyon, Sacramento river, exhibited enormous squashes, grown by them.

F. Ferris, San Lorenzo, Alameda County, exhibited five mammoth cucumbers.

Jewell's Vermont Dairy exhibited two cheeses of fine appearance.

E. R. Thurber, Solano County, exhibited two bunches of flame-colored tokay grapes of very superior appearance.

ON FLOWERS.

Committee:

MRS. J. G. HARDING, THOMAS BENNETT.

The following-named parties were awarded certificates of merit for collections of flowers and plants displayed during the Fair:

Mrs. Richards, for keeping a table supplied with hand-bouquets.

Mr. John Ross, an amateur florist of Oakland, for the best collection of cacti.

Messrs. Collie & Stewart, for a fine and continuous display, during the Fair, of about two hundred species of plants.

Mr. James Lick, for a fine show of twenty-five varieties of China Asters.—Awarded a diploma.

P. Nolan, Belle View Nursery, Oakland, for a fine display of Gladiati, and a number of rare cut flowers.

Col. Walker, Golden Gate Nursery, for a very great variety of rare plants, bouquets wreaths, emblems and cut flowers.

ON GROCERIES.

Committee:

MRS. HENRY L. DAVIS, R. E. ROWLAND.

In this department are some of the most important manufactures of the Pacific coast, which give employment to many hundreds of persons, and thereby cause the retention of a large amount of capital, and its profit, in our midst. Prominent among these is the refining of raw sugars by the San Francisco and Pacific Sugar Company, which is capable of supplying the entire demand for refined sugars on the Pacific coast of the United States. In this refinery sixty-five thousand pounds of raw sugar are used daily, the result of which is some sixty thousand pounds of refined sugar, of different grades, which have no superior in quality from any refinery in the world. Besides the refined sugar, there is produced a large amount of syrup, which, in this market is preferred to any imported. In the various departments of this refinery, there are two hundred and twenty-five men employed. The Bay Sugar Refinery Company of this city made no exhibit, but it is known to produce large quantities of refined sugars and syrup. All the raw sugars are imported, but it is to be hoped that, in time, California will supply the sugar required, as she possesses a soil and climate said to be well adapted for the successful raising of it. In this particular there seems to have been exhibited an apathy remarkable for so energetic and enterprising a people, but few trials having been made, and those mostly by inexperienced persons, whose labors, not being directed aright, have thus been thrown away. Could the demand for raw sugars for domestic consumption be supplied by our own people, additional employment would be given to many thousands of persons, while, between the value of the sugar produced, and the enhanced value of the lands producing it, many millions of taxable property would be added to the assessment rolls of the State. Certainly, in view of the great results to be obtained, it would seem to be the imperative duty of the various agricultural societies, that have from time to time drawn support from the State treasury, to make some persistent, practical efforts to inaugurate the raising of sugar. Where the fig, orange, lemon, olive, and almond thrive without protection, the successful culture of the sugar cane may reasonably be hoped for. It is by the success of such great agricultural products that the permanent prosperity of the State will be secured, as importing and manufacturing interests alone are liable to great and injurious depressions, which check and disheaten the energies of a people. Among other important manufacturing interests is that of manufacturing adamantine candles, which is now being engaged in by Wm. H. Scoville & Co., of this city, who have exhibited at the Fair very good specimens of their own make. The large extent of tunnel and quartz mining throughout this State and adjacent territory which get their supplies of candles through this city from the Atlantic States, would seem to afford a field of enterprise tempting and lucrative enough for capital to largely engage in. Considerable difficulties, however, have existed to prevent the successful inauguration of this branch of manufacture up to the present time, but it is to be hoped that better opportunities will now occur for its successful prosecution. One great drawback to the extensive manufacture of candles in this State has been the scarcity of lard, our agricultural population not having given the raising of swine that prominence in their business which it intrinsically deserves. While, on the one hand, they declaimed about hard times in their business—which undoubtedly at times was true—on their own part they have not striven to produce many articles which they might have done, the supplying of which would have lessened the drain of treasure that is constantly going on to pay for importations. Competent parties, familiar with the importation of candles at this port, estimate the amount at over half a million of dollars annually. When to this is added the consumption of lard oil for many purposes, and of which over 3,000 barrels have, within the last year, been transferred (by the admixture of mutton tallow here) into an article termed lard, and the large amounts of pork, bacon, and lard imported, it swells the total that could, as well as not, be saved by farmers to the State, to from $1,200,000 to $1,500,000 per annum. It is not within the province of this Committee to go outside of the sphere of duties assigned them in making their report, but they trust that the suggestions made above may be well considered, and thereby prove of service. Another production, which by its excellence has driven the imported articles out of the market, is the manufacture of vermicelli, maccaroni, and kindred edible pastes, all of which are manufactured in this city.

Extract of Coffee exhibited by Zwick & Lowen, of San Francisco.

Macaroni, Vermicelli and Italian Pastes. exhibited by Brignardello, Machieavello & Co, San Francisco. The articles exhibited were of most excellent quality, and the committee awarded the exhibitors a silver medal.

Ground Coffee and Spices, in glass and paper, exhibited by J. Strelitz, San Francisco. A very fine assortment of excellent quality.

Ground Coffee and Spices, exhibited by C. Bernard, San Francisco, which for superiority were awarded a first premium.

Sugars and Syrups, exhibited by the San Francisco & Pacific Sugar Refining Co. This company made a splendid exhibit of refined sugars and syrups of their manufacture, which were awarded a silver medal.

Sauce for Meats, exhibited by P. B. Comins, which was a fine article. Awarded a diploma.

Bacon and Hams, exhibited by Wm. Dick & Co. These smoked meats were of fine appearance and most excellent flavor, equal, in the opinion of the committee, to any heretofore exhibited. Awarded a diploma.

Fine Salt, exhibited by Plummer & Co, San Francisco. Awarded a first premium.

Dairy and Table Salt, exhibited by A. B. Winegar, agent, Union Salt Works, San Francisco. Awarded a second premium,

Adamantine Candles, exhibited by Wm. H. Scovillo & Co., San Francisco. Awarded a silver medal.

Soap and Soap Powders, exhibited by the Standard Soap Company, San Francisco. This Company exhibited samples of excellent soap for family, laundry and toilet uses. They also exhibited a concentrated erasive washing powder, which, by the addition of water, forms at once an excellent quality of soft soap. Awarded a first premium.

Soft Soap, by Miss Maggie Conghlin, San Francisco, one tub soft soap, home-made from table scraps—a most excellent article of its kind. Awarded a certificate of merit.

ON MATCHES.

Committee:

ANDREW S. CHURCH, JOSHUA HENDY, GEO. S. DICKEY.

This portion of the Fair was well represented by the "Excelsior," "California," and "Eureka" Match Companies, all indicating commendable progress in this branch of California industry.

The committee found about equal merit in the articles exhibited by each of the above competitors, but think the "Eureka" company justly entitled to the first premium in this division for variety and finish. Awarded a first premium.

Mining Summary.

CALIFORNIA.

CALAVERAS.—The Stockton *Independent* says that the Campo Seco Copper Mining Company shipped from the mine, during the year 1865, 1,902,501 pounds of copper ore. The Taunton Copper Smelting Company, whose works are located at Campo Seco, and have been in operation during the past forty-three days only, have within that time shipped 193,605 pounds of copper regulus. T. R. Anthony, a member of the company, kindly furnished the above figures. From the 1st to the 8th instant, inclusive, seventy tons of ore have been shipped from the Campo Seco mine, to this city, at a cost of $7 per ton for freight. In a day or two, the company expect to load a barge with ore for San Francisco.

The same paper says that last week five tons and ninety-eight pounds of smelted copper, from Haskell's furnace on the Buchanan lead, at Chowchilla, Mariposa county, arrived at the wharf in this city, and there are two large wagon loads on their way from the mine. This metal is almost pure copper, containing at least ninety per cent. of the genuine material. We understand that J. B. Meader will test a portion of it immediately. Those interested in this mine, and others in the same district, will undoubtedly be pleased to learn that such an evidence of the wealth of that locality has been produced. The indications warrant the belief that the district will prove quite as rich as any yet discovered in the State.

The amount of copper ore shipped from the Keystone mine, Copperopolis, during the year 1865, was 2,828,881 pounds, as shown by the books of R. B. Parker & Co. At the rate of $8 per ton, the freight from the mine to this city amounts to about $11,315. Of the above quantity of ore 2,599,845 pounds are rated as first-class, and 229,036 pounds at second-class.

The Calaveras *Chronicle* of the 15th instant says that Austin & Hathaway, of Brushville, have sold a quartz mine, located near that place, to some San Francisco capitalists, for $75,000. The purchasers have taken possession and will at once erect a first-class mill on the claim. The mine is one of the richest in the county, the lode being wide, well defined, and easily worked. There are, doubtless, others in the vicinity equally valuable, but for want of capital the owners have not been able to thoroughly prospect their claims.

A correspondent of the *Chronicle*, writing from West Point, says that on the 10th inst., some Mexicans struck a lead of gravel about a mile from town, near "Valentine Hill," which prospects from one to four bits to the pan. Unfortunately their claim lies above both ditches and cannot be worked except by carting; otherwise they would have ounce diggings.

On the same day, Wilson & Keys struck a continuation of the celebrated Henry lead, near Skull Flat, which prospects much better than the original location on the same ledge. The lucky discoverers were offered one thousand dollars for their claim the next day after they struck it, but, to use their own language they "couldn't think of it."

A correspondent of the same paper writes from Campo Seco, as follows:

As regards placer mining here, there has been little done this winter on account of the scarcity of water. We have reason to hope, however, that this state of affairs will be remedied shortly, as a preliminary survey has already been made for a *new ditch* to come from the north side of the Mokelumne river. This ditch will cross the river by means of a pipe laid on a wire suspension, and will carry water almost as high on our hills as there is any mining done. If this undertaking succeeds, we can turn out as much gold as any camp of our population in this county. We have a good deal of ground left here, which, with steady water at moderate prices will pay from three to four dollars per day. The reason this ground has not been worked heretofore, is that the Mokelumne Hill ditch company have not had water to spare, as they have always had good markets for their water nearer home.

Quartz.—The quartz claims of Messrs. Syme & Adler are daily improving in appearance; the rock prospects well, and in a short time we may expect to see those gentlemen have as good a thing as generally falls to the lot of mortals. The prospects of Messrs. Spencer, Lonnevig & Co., continue favorable, although the late rains have set back work a little on account of their shaft not being covered, but they are getting ready to resume operations immediately.

The Campo Seco company have struck, in their lower level, a large vein of very fine ore, which they are getting out so fast that they hardly know what to do with it. This claim is efficiently managed by an estimable gentleman, D. L. Morrow, Esq., than whom few more genial or whole-souled men can be found.

On the Lancha Plana copper claim work is going on briskly on contract, and every one feels sanguine that the energetic proprietors of this mine have a prosperous future before them. It is their intention to put another engine on their upper shaft as soon as spring opens, and if enterprise and energy command success, the above company are certain of reward.

KLAMATH.—The Klamath *News* says a mine which assays $3,000 in gold, and is besides rich in silver, has been discovered in Dillion township. The exact locality in which the mine was found "is at present a secret." The finder wishes to "feather his nest" by further discoveries, before he opens the door for a rush of eager "prospectors."

A Chinaman working on Six Mile Creek, a tributary of Salmon river, picked up, one day last week, a nugget of pure gold weighing twenty-five pounds. The lucky rascal immediately left for the Flowery Empire. It is the largest piece ever found in the county.

TRINITY.—The *Journal* says that the prospects for a glorious mining season in Trinity county have not been so good in ten years. At last accounts the snow was from two to five feet deep on Trinity, Brown's, Hay Fork, and Bush Creek mountains, and ten feet on Scott's mountain. It is a foot deep in Weaverville Basin.

PLUMAS.—The correspondent of the Quincy *Union*, from whose letter we have already largely extracted, communicates further information of the mines in this county as follows:

The Round Valley or Ellis ledge is situated in Round Valley, some three miles from the lower end of Indian Valley. This mine was located by John W. Ellis & Co., in 1860. In 1861 Mr. Ellis leased a portion of his ledge to Mr. E. W. Junkins & Co., who erected a fine steam quartz mill on it, and expended large sums of money in opening the ledge. The mine has changed hands several times; it is now in the hands of Hon. M. D. Howel, one of the ablest and most efficient quartz miners in our county, under whose superior management it is destined to be very valuable property.

The Crescent mill is situated on the west side, near the lower end of Indian Valley. This mine was located by Messrs. John W. Pulsifer and Jas. A. Blood & Co., in 1862. It is about three miles southeast of Round Valley, and is one of the best paying mines in the State. In the winter of 1862–3, Mr. Wm. A Bolinger opened the mine and erected a 24-stamp steam quartz mill upon it. In the summer of 1865 this company erected another mill, with a capacity of 32 stamps, which, together with the old mill, now gives them a capacity of 56 stamps. Their weekly dividends are now enormous.

The Indian Valley mill is situated between the Crescent mills and Greenville; there is during the summer and fall months a scarcity of water to supply this mill, and from this cause the present owners have not been able to realize the large dividends from their mine that the richness of their rock would warrant them in expecting. Mr. John N. Blood is largely interested in this mine and mill, and is, we believe, the President of the company.

The Lone Star mill, situated at Greenville, was erected by Messrs. Waterworth & Co., and is now owned by Messrs. H. C. Bidwell & Co. It is, beyond doubt, considering the amount expended in the erection of machinery, etc., and its limited capacity to crush rock, one of the best paying mills in this State. This company works rock taken from the McClellan ledge, and the amount of their dividends plainly show the value and richness of their ledge.

Premium mine, lying on the opposite side of Indian Valley from the Crescent mills, is supposed to be a continuation of the latter ledge. It was located by some parties as early as 1862, but lay in an undeveloped state until within the last year and a half, when it fortunately fell into the hands of its present enterprising owners. Since March, 1865, we we have been informed, this company have expended over $20,000 in developing it. A short time ago the company had 300 tons of their rock crushed at the Crescent mills, as "a working test," from which they realized over $9,000, clearly establishing the richness of their mine beyond a peradventure. Messrs. W. A. Bolinger and R. C. Chambers are the principal owners.

The Pennsylvania company's mine is situated east from Greenville, adjacent to the McClellan ledge, and is owned by Messrs. Trucks and Waterworth. It is said to prospect very rich, and the indications warrant the belief that it is also extensive. The enterprising owners of this mine are now erecting a large quartz mill, which is nearly completed. The mine was located in 1864.

Calahan's ledge was located in 1863, is in the neighborhood of the Pennsylvania, and is owned by its original discoverer, Hon. C. W. Calahan, who has, with untiring patience, unaided and alone for nearly three years, continued to work on this mine, getting it opened and prospected, and now he has the consolation to know that his labor was not in vain; for having gotten into his ledge, he finds it rich and extensive, and that he has now laid the foundation for a splendid fortune for himself.

The Camanche mine is situated near the Calahan claims, and is owned by Capt. N. C. Cunningham & Co. This mine is not yet fairly opened or thoroughly prospected, but from every indication, its lucky owners have good reason to believe that it will prove one of the richest among the very rich and productive mines of this locality. This mine was discovered and located in 1865.

The Abbott ledge, situated near Greenville, was discovered also in 1865, by Squire H. B. Abbott & Co., and bids fair to be a most valuable mine. There are also the Louisiana, Golden Gate, Flora Glazier, Kitts, Kettle, and a great number of other auriferous quartz mines in the localities above named, many of which are now being opened, and which may prove as rich as any yet discovered.

The Bull Frog mine and Quartz mills are located on the head waters of Bull Frog Creek, a tributary of Rush Creek, about four miles from Round Valley. This mine is likely to become paying property whenever it will be worked to advantage, and by experienced quartz miners.

In fine, this section of Plumas county is destined some day, not far hence, to become one of the very richest quartz mining localities in California.

SIERRA.—We learn from the *Messenger* that the Masonic Company, at Star Hill, have lately been taking out big dirt. For five days' drifting, they recently took out one hundred and ten ounces of dust.

The Union Company, at Unionville, have commenced running their mill again, with a prospect of keeping it tramping, their ledge being opened to the extent of six months' run on first quality rock, and we may expect to hear of big runs if only one half the truth he told. The rock is of bluish tint, with fine rich sulphurets and much large coarse gold.

The *Advocate* says that a contract for running a new tunnel for working the Wheeler ledge, just above town on the North Fork, has been let to Messrs. Parks & Co., by Mr. Holmes, general superintendent. Eight dollars per foot is the price paid for completing the same. The Company intend to erect a new and commodious mill the coming season, for working the rock of the Empire claim.

McFarlan and Baldwin, we understand, took out fifteen dollars as the result of one day's labor from their claim, one day last week. One pan of dirt yielded two dollars and fifty cents. The Empire has been extensively mined since '50.

TUOLUMNE.—The *Democrat* states that certain agents of San Francisco capitalists are visiting Tuolumne county with the view of purchasing quartz mines.

The Sonora *Herald* says that Professors Blake and Silver have lately been examining the mines in Tuolumne county.

AMADOR.—The *Ledger* says that a cinnabar mine has been discovered near "Two Cent Ranch." A correspondent of the *Ledger* writes from Volcano that Mr. J. M. Hanford has commenced operations on the old abandoned Pioneer mine. This mine has been worked several years and until about three years since, when the owners supposed they had exhausted it; but as now appears, they had only run off the lead. Mr. Hanford having examined the matter thoroughly, bought the mine and has commenced the task of developing it. This mine always paid well so long as they had quartz. No doubt is entertained but what the real lode will be found. The once prevailing idea that silver mines never run out and that gold mines did, has been entirely exploded. This country, and this county in particular, has demonstrated the fact to a certainty that quartz gold mines never run out. Many deep mines in this county, and some are to a depth of one thousand feet, demonstrate the fallacy of quartz gold mines running out; and it is universally the case, the deeper down on the vein the more gold is found in the quartz. There are places, or spots, in all quartz veins where the quartz does not appear on the surface. These spots, or places, vary in extent from a few feet to perhaps a mile; but it is certain that wherever paying quartz has been found on or near the surface that the vein at that particular spot never runs out.

The rock in the Golden Gate mine is very rich. They have a new 10-stamp mill just completed and running. It is thought by good judges that they will make the biggest "clean up" ever made in the county. The extensions, both north and south of the Golden Gate lode, have been located, and the parties are only waiting favorable weather to prospect them.

Another correspondent from Pine Grove says that rich discoveries in quartz are daily being made known in that section of the county.

The Tellurium Company have struck very rich rock in their main tunnel. They have been for a long time running along side the lead, when about two weeks ago, they ran a side drift, and discovered a rich lead about four feet wide.

Messrs. J. F. Donahar and J. W. Ballard have struck a rich quartz lead; they have a number of hands at work and the prospects are said to be really good. This is called the best quartz mining district in the county.

The miners of this place have been holding meetings here for the last month, making laws to govern the Pine Grove District—a new District that has lately seceded from the Volcano District.

VIRGINIA CITY AND VICINITY.

The Virginia *Enterprise* gives the following interesting items concerning the number of men employed in the mines at Gold Hill, and the amount of ore daily extracted: The Bullion mine employs at the present time twenty-eight men in and about the mine. No ore is being taken out at this time. The Exchequer mine employs twenty men; are extracting no ore yet. The Alpha mine employs fifty men, and is taking out seventy-five tons of ore per day. The Imperial mine employs seventy-five men, and is taking out 150 tons of ore per day. The Empire mine employs forty-nine men, and is taking out sixty-five tons of ore per day. The Eclipse mine employs twenty-seven men, and is taking out forty tons of rock daily. The Consolidated mine employs thirty-eight men, and is taking out ten tons of ore per day. The Challenge mine employs forty-eight men—taking out fifty tons of ore per day. Confidence mine employs forty-one men, who take out fifty-five tons in twenty-four hours. The Yellow Jacket Company, with a force of 180 men, hoist out 175 tons daily; but a portion of the men are employed in the new works, and are not yet taking out ore. Eleven men are at work in the Kentuck mine, taking out about ten tons per day. Crown Point mine brings to the surface daily seventy-five tons of ore, employing seventy-five men. In addition to these are several small mines—the Bacon, Bowers, Burke & Hamilton and others—employing about seventy-five men, and taking out some 100 tons of ore daily. Thus the mines of Gold Hill—leaving out those at work in the mills—employ in the aggregate 717 men, extracting 950 tons of ore daily. At $30 per ton this amounts to $28,500 per day and $855,000 every month.

The Pacific mill, at Virginia City, owned by the Alpha Company, will shortly be started up on ore from the lower level of the Company's mine, where good developments have lately been made.

The Mariposa mill is being renovated and put in good working order. The capacity of the mill has been increased from sixteen to twenty tons per day. New Wheeler pans will take the place of those used heretofore.

The Bullion mine is at present putting in another section of pump, which will make a third lift, and which will pump the water from a depth of 675 feet.

A piece of quartz about the size of a hen's egg, which is nearly half gold, has recently been taken out of the Imperial mine, Gold Hill, at the depth of 600 feet below the surface.

REESE RIVER.

It appears from the quarterly returns of the Assessor of Lander county, which includes Austin and vicinity, that there were 1,276 tons of rock mined and crushed in that district during the quarter ending January 1st, 1866. The several crushings yielded from $32, the lowest, to $359, the highest yield per ton. Forty-four companies are reported; eighteen of which exceeded a yield of $100 to the ton, and twelve others that of $75, leaving only fourteen to fall below $75 to the ton.

The *Reveille* says that the very rich plumbiferous ores of Washington District are about to receive the attention they deserve. Experiments, by Señor Alvares having fully proven that a smelting process can be profitably adopted, it is the intention of parties interested to secure the services of some practical and thoroughly competent person to put up the requisite furnaces and superintend the management of the same. If such a plan is carried out, there can be no doubt but that the movement will give a great impetus to a certain class of mines in that region which cannot be worked by the wet process generally in use.

The Ware mill now under the superintendence of J. W. Varney, has been set in operation, and is reducing ore from the Silver Chamber mine.

Mechanical.

THE WINANS' "CIGAR BOAT" NOTHING NEW.

About the time of the breaking out of the Rebellion, the country was told that the brothers Winans, two wealthy gentlemen of Baltimore, were about commencing the construction, in that city, of a steamboat on a novel principle. It was called, from its peculiar shape, the "cigar boat"—the hull being formed of a cylinder, or cylinders, running to a point at each end, much like the shape of a cigar. If we are not mistaken, a small model boat was constructed and placed upon the bay, and preparations were in a state of forwardness for the construction of one of large size. The rebel proclivities of these brothers, however, and their attempted open aid of the rebellion, soon rendered their absence from the country essential to the safety of their persons. They accordingly crossed the ocean and took up their residence in London, where they soon resumed the project, and again laid the keel for another boat, the successful launching of which has recently been announced by the English papers. The point sought to be gained by this new method of construction is speed; and there is little doubt but that the end will be accomplished, but at the expense, however, of capacity, convenience of arrangement and cost of construction.

A "cigar boat," however, is nothing new. The idea originated with a Col. Burden, of New York, some thirty-five years ago, who constructed a boat, with the machinery and upper works placed upon two hollow, cigar-shaped cylinders, each 300 feet long, with the greatest diameter at the center, and measuring about eight feet. The taper of the cylinders was a regular parabolic curve from the center to a point at each end. The cylinders were placed parallel to each other, sixteen feet apart, with a single wheel thirty feet in diameter, working in the center. The engine and boilers were built under the direction of Rev. Dr. Knott, of Troy, N. Y. She was built in New York, and her first trip was made, we believe, to Troy, just above Albany. During this trip she accomplished the then unheard of speed of *twenty-one* miles an hour, against the current! This, it should be recollected, was at a time when the highest authenticated rate of speed of a steamboat had not exceeded *fourteen miles* an hour. We believe she made one or more trips to Providence, Rhode Island. What ever became of her, we know not. Our impression is that, for some reason or other, she was found impracticable, probably for the reasons already intimated. Her advent, however, appears to have opened up a new era in steam navigation, by inducing steamboat men to pay more attention to speed in the construction of their boats. She was followed soon after by the ill-fated "Lexington," which was burned on Long Island Sound in the winter of 1840–41. The Lexington was one of the first of the swift class of boats, constructed on a modification of the old models. Her rate of speed, if we mistake not, nearly or quite reached that of Col. Burden's boat; while her model being, in the main, a mere elongation of the "tubs" which had been in use up to that time, was much more serviceable and convenient than that of the "steam raft," a designation which was given to Col. Burden's boat by some of his competitors.

One of the earliest of the improved model Sound boats, was the "Providence," built and for many years run under the direction of the late Peter F. Ewer, of Nantucket. This boat, after making a few trips, was found not to answer the expectations of the projectors. She was therefore hauled upon the "ways," sawed in two at the center, lengthened some forty feet, and provided with a false bow which projected a considerable distance beyond her original build. When again launched, she was able to out-distance any of her competitors. From this time out, the tub-shaped boats began to go out of date. Col. Burden, in endeavoring to carry this principle of lengthening out the hull to its *ne plus ultra*, instead of building a boat so narrow that she could hardly stand erect, contrived a *pair* of boats, by which he was relieved from all danger of capsizing, while he was able to *elongate* to his heart's content. He probably overshot the mark, and the Winans' brothers are repeating the same blunder; albeit their efforts are greatly astonishing the Johnny Bulls over the water.

Col. Burden's experiment was repeated either the same year or the next one subsequent, by a Mr. Sanford, of Prescott Harbor, Upper Canada. Mr. Sanford endeavored to introduce some improvements, hoping thereby to overcome the difficulties encountered by Mr. Burden. This experiment was on a smaller scale—his cylinders being only about half the length of Col. Burden's, while their greatest diameter was one foot larger, and instead of being round, they were slightly flattened on the bottom; the design being to run in very shallow water, and pass through the rapids between Prescott and the "Cedars." Her speed and general behavior, on trial, did not answer the expectations of her projectors, who, therefore, did not feel justified in making the hazardous attempt to pass the "rapids." This boat, also, appears to have subsided into obscurity; at least *we* have no knowledge of her, subsequent to her trial trip. We believe she is the only connecting link between Col. Burden and the Winans' brothers.

NEW INVENTIONS.

The Magnesium Light Made Practical.—It is stated in the English papers that a literary gentleman, who has been for some time a secretary or amanuensis of Mr. Carlyle, the newly-elected Rector of the University of Edinburgh, has just invented a lamp for burning magnesium, of a character so simple and effective that all the mechanicians are astonished. It is one of those happy ideas that seem inspired, and that at the same time make everybody wonder they had not thought of them. The magnesium is reduced to a fine powder, then mixed with sand, it runs through a tube as from an hour-glass, and when lighted by a match, a brilliant and steady flame is produced, until the reservoir is exhausted. It is said that all the difficulties of using this light for streets, public buildings, light-houses, and so on, are overcome by this device.

An Instrument for Detecting Fire-damp in Mines.—A very ingenious and simple instrument has recently been invented for this purpose by Mr. Ansell, of the English Mint. Its action depends on the tendency which exists in gases and vapors to diffuse themselves through each other, notwithstanding the interposition of membranes or porous substances, etc. It consists of a small brass cylinder, one inch and a half long, and three-quarters of an inch internal diameter, and of a piston working freely within. Under the piston, and within the cylinder, is a spring, which, when pressed by the sinking of the piston into the cylinder, moves a hand upon a dial on the outer case—which has a plate of porous earthenware at the back. When this instrument is brought into an atmosphere containing coal gas, the latter passes through the porous plate, and the air within the case being expended, the piston is forced into the cylinder to an extent which is indicated on the dial. Taken out of impure air, the effect will be reversed, and the index will move on the dial in the opposite direction, the exact amount of purity or contamination being indicated. It is clear that the instrument might easily be made to set a bell ringing, or give some other notice of danger from the presence of an explosive atmosphere. So far as trials of it have been made, it seems to work satisfactorily.

A Valuable Invention, Probably.—It is said that a "Cotton-Picking Machine" has been invented in the Atlantic States, which, it is believed, will eventually prove almost as valuable to the cotton interest as the "gin." If this invention should accomplish all that is claimed for it, it could not have been made at a more opportune moment, and we might almost say the freedman's occupation is wholly gone.

A Ship's Fire Alarm.—A curious invention has been put to practical test on board a British frigate, at Portsmouth, England, which is designed to give instant notice of fire on shipboard. It consists of a small galvanic battery placed in the captain's cabin, with an indicator dial-plate and alarm-bell, having twenty insulated wires communicated with as many numbered sections of the ship. Calorimeters are connected with the extremity of each wire, in its separate section, so that as soon as the temperature of either section reaches a point of dangerous heat, such as would be produced by approaching spontaneous combustion or actual ignition in the near vicinity, the electric circuit is completed, an alarm-bell set to ringing violently in the cabin, while the hand of the indicator points to the number on the dial-plate, corresponding to the section in the ship where the dangerous heat has been generated. The existence and proximate locality of the fire are thus known at once. The calorimeter consists of a small metal vessel, some three inches in length, three-fourths filled with mercury. The outside of the vessel is in contact with one part of the copper wire of the section, the other part being suspended through the stopper in the neck of the vessel, the distance between the latter part of the copper wire and the mercury being regulated according to the temperature considered dangerous. Should this latter event ever occur, the mercury necessarily expands, and, bringing the end of the wire in contact, the circuit is completed. A slight modification of the same arrangement also gives notice when the water finds its way above the proper level in the ship's bilge. This arrangement is to be placed on board of all transport ships in the British navy, and will probably soon be still more generally introduced.

A Steam-Carriage on Ice.—The Lake Superior *Mining Journal* describes a new invention by C. C. Elliott, of the Railroad Company's Machine Works, at Escanaba, which consists of a small steam-carriage, designed to run upon ice. It is an ice-car, built something after the form of a dummy railroad-car, but resting upon double sets of bob-sleighs, instead of wheels, at each end. In the center of the car is a wheel something like a cog-wheel, which runs upon the ice, and propels the car. It is steered by a properly-constructed wheel in the rear. The carriage has been designed as an experiment, and will be tried upon Green Bay this winter. The carriage is said to weigh only about 800 pounds.

More About Titanic Iron.

Since the publication in England, of the successful experiments with titanic iron, as noticed by us two weeks ago, a writer in the London *Mining Journal* states that the excellent qualities of the Russian, Swedish, and Norwegian pig-iron, made from magnetic iron ore in charcoal blast-furnaces, are derived solely from the not inconsiderable amount of titanium which the iron ores from Miask and Nischneitagilsk in Russia, Danemora in Sweden, and Arendal in Norway, contain a quality which renders it particularly adapted for the manufacture of steel and very strong wrought-iron. Although not much titanium combines chemically with the pig-iron itself, it acts undoubtedly as a very powerful purifier in the blast-furnace, and if used in the proper way, even with rather inferior ores, it improves the quality of the iron in a wonderful manner; far more so than manganese would be able to do. The introduction of iron ore which contains titanium in the mixture of ordinary blast-furnaces for the production of finery iron will, undoubtedly prove a great success. The writer in the *Journal* says there is no need to go to New Zealand for titanic iron ore; as it exists in large quantities in the south of Norway, containing nearly double the percentage of titanic oxids which is found in the New Zealand sands. It is thought that this ore can be delivered in England much cheaper from Norway than from New Zealand. Is it not a little remarkable that the attention of iron-masters has not been directed to this matter at an earlier day? or has it just been discovered, even by the Swedes and Russians, that the superiority of theirs over English iron has been due to the presence of this well-known mineral in the ore which they employ? We believe this description of ore has not yet been discovered, in any considerable quantity, within the limits of the United States—perhaps, however, because attention has not been particularly directed to it.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on prosecuting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inventors of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensue. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforhand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to favor us with their cases, and are qualified facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved in the most plain manner.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as soon as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every application for a patent, for seventeen years	15
On every caveat	10
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the granting of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

DEWEY & CO., Agents,

Mining and Scientific Press Office, No. 505 Clay street, corner of Sansome, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Mr. Wm. R. Bradshaw, is our Special Correspondent and Traveling Agent. All favors or assistance rendered him in his progress through the country in behalf of our journal, will be duly acknowledged.
SAN FRANCISCO, Jan 1st, 1866.

Mr. A. C. Knox, is our fully authorized Traveling Agent, and all subscriptions, or other favors extended to him, will be duly acknowledged at this office.
SAN FRANCISCO, Jan 11th, 1866.

San Francisco:
Saturday Morning, Jan. 27, 1866.

A MINING AND AGRICULTURAL COLLEGE.

Among the most important acts of the late Miners' Convention at Sacramento, was the good degree of unanimity displayed in favor of the establishment of an Institute in this State having for its object the teaching of the sciences bearing upon the two great leading pursuits of mining and agriculture. In furtherance of this project, a series of resolutions were adopted recommending that the Legislature proceed at once to the establishment of a "Mining, Agricultural and Mechanical College." The alacrity and unanimity with which the agriculturists have come forward, and united with the mining interest in the furtherance of this movement, even to the sacrifice of what may be considered their own more especial claims upon certain grants and funds, available for such purposes, cannot fail to elicit from our mining friends a high appreciation of the generosity displayed in that act. It is to be hoped that the movement so nobly inaugurated, may lead to a still closer union of the two interests, each of which in this State is so peculiarly dependent upon the other.

At some future time we propose to discuss the benefit which the agriculturist must derive from such an institution. It is our present purpose, however, to speak more particularly to our mining readers.

The importance of the establishment of schools on the Pacific Coast for instruction in mining is now pretty generally admitted, so much so that it is scarcely necessary that we should stop, at this time, to discuss that portion of the subject at all; and we shall chiefly confine our remarks in the present and perhaps one or two future numbers, to the character of the instruction which should be rendered.

In conversation with gentlemen who have had much experience in European mines and mining schools, previous to coming to California, we have been told that even the most experienced and skillful miners from that continent need a local education here—they find it necessary to introduce certain modifications into their European practice and education, which are indispensable to the altered condition of things here from what they have been accustomed to encounter there.

Gentlemen who are sending their sons to Paris, Freiburg, etc., to obtain a knowledge of mining engineering and metallurgy, will find on their return that our varied resources, increased cost of labor and material, peculiar character of machinery and different habits of thought, will render nugatory to a great extent, the application here of the practical portion of their European education. The theory, of course, is the same everywhere. The character of the machinery employed here is most essentially different from that employed there—and in almost every particular is greatly improved.

Our stamping mills, for instance, are a long way in advance of the same class of machinery there. Any person who is acquainted with the stamps in use in both localities, must admit this fact. The revolving stamp, unless quite recently introduced, is unknown there. Almost every particular with regard to the construction of the stamp, mode of discharge, etc., has been improved in California, until our batteries are now doing nearly or quite double the duty, per head, of those employed in Europe.

Again, our admirable pan system is entirely unknown in Europe, the nearest approach being the Hungarian bowl; and when we contrast the cumbrous German steam engine with the light and effective engines used in California and Nevada, we must set down our Teutonic friends as full half a century behind us.

Our hoisting machinery, for the depth we have gone, is decidedly superior to the generality of that employed in Europe. Our safety cages are greatly improved over those, elsewhere employed, in lightness, effectiveness and safety. We have heard it stated by competent judges, of foreign birth and education, too, that some of our best hoisting works, such as those employed at the Yellow Jacket, Savage, Gould & Curry, etc., are capable of extracting double the amount of ore raised at any mine on the European continent.

In our efforts at "progress," we may at times have overstepped the bounds of economy, and accomplished a large amount of work at considerable unnecessary waste of mineral; but we have gained largely in experience.

In the metallurgy of silver, though our experiments were at first attended with heavy losses, we have now arrived at a point at which we can learn but little from European schools, that will be applicable to our local peculiarities and necessities.

In the assaying branch of metallurgy we are somewhat at fault—in analytical chemistry, in particular, we freely yield the palm to European Professors; but as practical assayers we claim a full equality with either our German or English cousins.

In relation to underground engineering, our miners are not as thorough as they should be; but this deficiency arise more from our national character of go-ahead-ativeness—our care for the present only, at the expense of the future—than from a lack of knowledge for thorough work. With respect to subterraneous surveying, the German miner's dial, a sample of which may be seen at Sack's, 203 Montgomery street, would indicate that the Freiberg schools have made but little progress for the last half century at least. The most indifferent of our mountain county surveyors would not use such an instrument.

As we are writing at this time in favor of an agricultural as well as a mining school, it may not be out of place here, to allude to the universally acknowledged fact that our European friends are most sadly behind Americans in the practical departments of agriculture. As a proof of this we need only to point to the records of our patent office, and call attention to the contents of our agricultural warehouses, filled with mowing and reaping machines, threshers, steam ploughs, etc., a class of mechanical appliances almost unknown in Europe, where agriculture was carried on for centuries before America was discovered; but whose fields, even to this day, are chiefly supplied with American machinery.

From the above facts may be adduced the most unanswerable arguments in favor of the establishment of an American school, where young American men may be taught the use and employment of American machinery, and where such ideas may be instilled into the minds of students, as will not have to be *unlearned* before they can put their theories into practice.

The students of both agriculture and mining will find a larger and better field for practical instruction at home, than it will be possible to reach in Europe. Let us then found, nourish and build up on our own soil, an Institute for instruction in those sciences, which shall be adapted to our peculiar local needs, and educate our young men at home, instead of spending thousands of dollars abroad, much of it for that which must be unlearned when they get into actual practice. We have much to say upon this subject, which we shall endeavor to give, from week to week, so long as the subject of the establishment of a California Mining and Agricultural College shall be under discussion before the Legislature.

IMPROVEMENT IN THE PHOTOGRAPHIC ART.

From the first introduction of the photographic art to the present time, it has ever been the constant study of the artist to improve in their efforts to impart a more life-like aspect to their pictures of the human face. Much has already been accomplished in years past; but we have never seen a greater advance in this direction, apparently at one step, than has recently been made by Messrs. Bradley & Rulofson, as exhibited in some admirable pictures recently produced by them, and now on exhibition at their gallery, 429 Montgomery street. All artists have been painfully cognizant of the fact of the difficulty of obtaining a good picture of persons who are not possessed of fair complexions, or who may possess even the slightest imperfection of countenance. In the ordinary processes all such imperfections are unavoidably exaggerated. By the peculiar action of the rays of light, even a *faithful* picture is unattainable, and recourse is had to artificial coloring and re-touching, which, in the best hands, is but a bungling imitation of what Messrs. Bradley & Rulofson are, by their improved process, enabled to accomplish by the unaided pencil of light.

So far may this process be carried, that even nature may be eclipsed, and the wheels of time rolled back by the steady and guarded action of the rays of a single day's sun. Under the skillful direction of these gentlemen, the action of the rays of light alone is made to wipe out "spots" and harsh shadows from their pictures, to remove the wrinkles of age, and give freshness and beauty to the face and *contour*, wherever that has once existed in the original. Much of this may appear impossible, and would be so to us had we not seen the evidence, and, to a certain extent, learned the process by which it is accomplished; which is nothing more than an ingenious application of some of the simplest principles of optics. Our readers are all aware of the superiority of the stereoscopic picture over the ordinary photograph; we believe we are giving no clue to their secret when we say that every one of Bradley & Rulofson's improved pictures consist of a separate stereoscopic representation of every mathematical point on the entire surface of the picture, blended in one harmonious whole, in such a manner as to bring out the object with a beauty of finish, roundness of feature, and life-like expression, totally unattainable by any other process known.

ANALYSIS OF THE WATER OF MONO LAKE.—On page 210 of volume 10, we gave a full description of Mono Lake, with some account of the peculiarities of its waters. This description was furnished us by Mr. J. R. Murphy, now superintendent of the assay office of the National Bank at Austin, Reese River. Mr. Murphy has recently furnished the Reese River *Reveille* with the following analysis of this water: Quantitative—Chloride of sodium, 5.854; chloride of potassium, 1,581; chloride of calcium, 2.630; chloride of magnesium, 8.206; sulphide of calcium, traces; sulphate of lime, 0.402; sulphate of magnesium, traces; solid contents, 17.637—in every 100 parts. Qualitative—(only) for the acids present, showing—Hydrosulphuric acid in abundance; Carbonic acid in abundance; Boracic, strong traces; Phosphoric acid, slight traces; Silicic acid, slight tracee.

THE AMERICAN FREEDMAN'S COMMISSION.

It is much to be regretted that any portion of the California press should be found treating with levity the efforts in behalf of the great national philantrophic movement, now under the direction of the "American Freedman's Commission." With the exception of the immediate necessities of active campaigning, during our late terrible war, the world has never presented such a necessitous field for active and earnest philanthropy as is embraced in that occupied by this Commission. It is not a work sought out by officious philanthropists, as a field in which to exhibit their humanitarian efforts; but it is a great, home fact, thrust upon the American people by the "logic of events," and they will richly earn the scorn and contempt of the world if they ignore it. Sympathy for the *colored* race is not, *de facto*, its foundation—the bed-rock upon which action, by those not in sympathy with that race, may reasonably be founded, is the welfare and protection of the white race at the South. Crushed by the fortunes of war, irritated by a complete revolution in their social condition: peace has naturally enough found them, as a people, neither able in purse or disposed in temper to control the disorganized social element by which they are now surrounded. It would be less than human for the people of the North to refuse, in such a crisis, to lend a helping hand in their deep distress; and the man who would turn honest, well-directed effort in such behalf to ridicule, would laugh at the direst calamity which could befall his neighbor. No work of such a vast scope can be carried on without union of effort, and well arranged machinery. To a great extent the same men are engaged in this work who have acquitted themselves with so much credit and fidelity in the great Sanitary Commission, the necessity of which has now passed away. So far as the public are informed, all engaged in this new work are men of unimpeachable reputation; and they should be sustained by all the aid and encouragement which a generous and humanity-loving public can bring to bear.

In this connection, we would call attention to the announcement that there will be a meeting of the friends and members of the Freedmen's Aid Commission for this coast at Platt's Hall, on January 29th, in the evening of that day, for the purpose of publicly inaugurating the officers, and ratifying the measures heretofore taken for the organization of the association here. Honorable Cornelius Cole, Hon. A. A. Sargent, Rev. Horatio Stebbins, Rev. Jesse Peck, Dr J. F. Morse, Gen. John F. Miller, F. Billings, Esq., and Hon. Thompson Campbell, will address the meeting.

THE PANAMA MAIL STEAMSHIP CO.'s steamer Sacramento leaves this city on Tuesday next, to connect at Aspinwall with the Company's splendid new steamer Henry Chauncey for New York. Passage rates are as follows: First cabin, outside, and ladies' saloon rooms, $210; first cabin, inside rooms, $162 25; second cabin, $99 75; steerage, $72 50. This Company have now their own boats running through to New York, and passengers will hereafter be relieved from the intolerable impositions so often practiced upon the other side.

EXTENSIVE LAND SLIDE.—The Nevada *Gazette* is informed that an extensive slide occurred near the South Yuba, a few nights since. A quantity of earth, about a hundred feet in width and three hundred in length, became loosened, and slid from near the top of the hill into the river, carrying down large trees, etc. The slide crossed the road in one place, filling it with loose earth, but fortunately not injuring the grade.

ANTIMONY AND ITS ORES.—We have received several inquiries with regard to the nature of antimony. In answer we would say that the *present* price of antimony in Europe is about $125 per ton. The demand for it, however, is quite limited, and not sufficient to justify any advances upon either the metal itself or its ores for shipment from this State. It has no price, in quantity, in this city.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Meetings, Dividends, Assessments and Delinquent Sales.

Comprising the Names of Companies, District or County of Location, Amount of Assessment; Date of Meeting, Delinquent Advertisement and Sale, and Amount and Time of Payment of Dividends.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, January 27th, 1866.

The amount of capital offering for loan purposes shows no abatement, amply supplying the wants of all classes who can furnish the requisite security. A fair demand prevails in bank circles, and choice names are passing at 1@1¼ ₱ cent. per month, the latter being the current rate for the usual discounts made. In the open market negotiations are affected at 1½@2 ₱ cent., according to the collateral offering.

Receipts of treasure from the interior and north coast, since Saturday last, amounted to some $1,100,000, making an aggregate of $3,100,000 thus far during the current month. The yield of Nevada this month will compare unfavorably with a corresponding period last year.

Bullion has met with some inquiry this week, and gold bars have been taken to account by bankers and others, at 840@850. Silver remains unchanged, and bars of average fineness are worth about ½ ₱ cent. premium.

Legal Tenders have continued active, and some $160,000 were dealt in within a range of 71½@70½c, closing at about 70½c asked. Considerable sales of National Bank Notes have been made at 70¾@70½c. The latter are somewhat less desirable than Legal Tender Notes, for the reason that, although received by Government officials in this city, for taxes, etc., they are invariably refused by many parties for freights due here upon shipments of merchandise from the East. Our latest telegraphic advices from the East quote gold at 139½ on the 24th inst.

There has been a slight improvement in some mining shares during the week; but other stocks evinced less strength yesterday than at the close of last week. The ore product of a number of prominent claims continues fully up to the average of the past six months, with, however, a less flattering net result in bullion. In view of the fact that current expenses remain the same, if not larger than formerly, it would seem eminently proper at this time to introduce more economy in the management of different companies, if it be practicable under existing circumstances. Many stockholders are of the opinion that too much is paid for labor in Nevada, and that the pay rolls of every company should be materially reduced. Some contend, also that the services of a number of employees, other than laborers, could now be dispensed with without the least detriment to the interests of shareholders. It is thought that money could be saved if less prospecting were done for new bodies of ore, in ground giving no evidence of the existence of a mineral bearing lode, and that the enormous expenses incident to certain improvements under way, (without knowing positively that they will ever be used for the purpose intended), is likewise injudicious and unnecessary.

Gould & Curry rose from $810 to $835, then sold at $800, seller 60, and closes at about $800, seller 30. In drifting south a distance of 200 feet from the second station, in the D street shaft (600 feet from the surface), a connection has been made with the old works, at which latter point operations can now be resumed without any trouble from water. Receipts of bullion are likely to exceed $150,000 for January, not withstanding the company's mill made but half time during the first fifteen days of the month, and only one small outside mill has been employed.

Savage has been active, steadily advancing from $630 to $720, buyer 30, then selling at $695, and changing hands yesterday at $695. In all some 130 feet were sold at these rates. Recent crushings of ore at Land's and the Pacific mills, yielded respectively $36.75 and $34 per ton. We learn of no material change in this mine.

Crown Point rose from $525 to $610, and closes at $610. During the week ending January 19th, 435 tons of ore were raised to the surface, 235 of which came from the lower level. In the west stratum of the latter the north drift has extended 50 feet, and the south drift about 25 feet, showing good ore in both directions. The Birdsall & Carpenter, and the Pioneer mills (20 tons capacity per day each), have been employed, which will enable the company to reduce some 80 tons per day. The rate to be paid for crushing is $14 per ton.

Yellow Jacket has been dealt in to the extent of 300 feet, receding from $380 to $360, advancing to 427½, dropping to $335, rallying to $355, and closing yesterday at $350. The yield of bullion last week, we are informed, was some $21,000. Telegraphic dispatches state that the east wall of the ledge has been penetrated in drifting from the south shaft in the lower level, disclosing a body of quartz 15 feet wide, and carrying a small quantity of mineral.

Hale & Norcross has been in better favor, and more than 100 feet were sold, steadily advancing from $312½ to $372½, dropping to $362, and closing at $405. A seam of quartz, 3 feet wide, lying against the east clay wall, has been met with in the north drift from the 700-foot incline.

Ophir has been tolerably well maintained, rising from $320 to $345, receding to $335, and then selling at $330@325. Receipts of bullion from the 1st to the 20th instant, amounted to $36,000.

Empire Mill has met with no sales, but was inquired for at $210 per share; $240 asked. An average of some 65 tons of ore per day are now taken from this claim, chiefly from the upper or old works, most of which is yielding about $35 per ton.

Chollar-Potosi rose from $220 to $234, and sold yesterday at $233½ @$232. In the Grass Root station workmen have been employed recently in stripping down the west wall, and taking out the usual quantity of ore. The Bajazette ground is said to present the same appearance, and the stope over Pat's incline is producing about 30 tons of ore per day. The Chollar mine, between the 3d and 4th stations, is said to look remarkably well, and a winze sunk 34 feet on the east side shows good ore all the way down. The new shaft is timbered to a depth of 559 feet, and the drift to the ledge is in 157 feet upon that work, and in the mine 157 men are now employed. During the week ending January 19, 550 tons of ore were sent to custom mills; 51½ tons were sold at $3, and 8¾ tons at $5.

Alpha has attracted but little attention, and trifling sales were made, receding from $300 to $240, and closing at $235 bid. Belcher declined from $210 to $155, and sold at the close at $155.

Imperial rose from $100, seller 60, to $118 per share, declining to $116½, and selling yesterday at $111@113.

Bullion fell from $33 to $30, and then sold at $38, assessment delinquent. Overman rose from $37 to $42½, dropped to $39, and closed at $39. Confidence was sold within a range of $40 and $44, closing at $40 bid.

California Steam Navigation was sold at $62, and closed at $62 asked. North Beach and Mission Railroad was dealt in at $43½, Firemen's Fund at 122½, and Spring Valley Water company at $57@57½.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last amounted to $759,926.

FIRST ARRIVAL.—The first arrival of goods at Salt Lake *via* the Colorado, has been reported—thus giving a practical demonstration of the feasibility of establishing such a course of trade.

THERE are now in existence no less than fourteen hundred and fifty-seven oil companies, with a total capital of eight hundred and sixty-nine million five hundred and ninety-four thousand dollars.

The Gold Hill *News* says the Gould & Curry mine employs two hundred and seventy men—of which number there are nine blacksmiths, one principal and three regular engineers, four brakemen, two firemen, and twenty-three carpenters. The mine produces three hundred tons per day for reduction, which is taken from three different places in the mine.

Mount Hood Again Burning.—On the 5th instant, according to the *Oregonian*, Mount Hood was again throwing out dense volumes of smoke. A gentleman who witnessed the eruption early in the morning, states that the horizon was red with the glare of light from the volcano about dawn.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,

23v11qy 423 Washington street.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Our Patent Agency.

The Patent Agency of the Mining and Scientific Press has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of Letters Patent from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

And in accordance with law and an order of the Board of Trustees, made on the ..th day of ..... , 186 , so many shares of each parcel of said stock as may be necessary, will be sold at the.....

....., on ....., the ..th day of....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled by mail or express, as may be desired.

By Mail.—The Mining and Scientific Press will be sent by mail to any part of the civilized world. In case of removal, subscribers have only to inform us of the post-office address of their old and new location, and the paper will be sent accordingly.

A Rare Book.—An instance of how often the purchase of a fine book, besides encouraging art and literature, may prove a good pecuniary investment, is given by the price, at the present moment, of the original grand folio edition of Audubon's "Birds of America." The work was completed in 1840, when Baron Couvier pronounced it "the most magnificent monument ever raised by art to natural science." A few years since copies could be procured for from $500 to $600; now $1,500 is asked for a well-bound copy, and it would not be possible to procure one of any kind for $1,200. As only 175 copies were printed, and several of them have been lost or destroyed at the South, the price is certain to advance, and will shortly range as high as $2,000.

To Printers.

We have for sale, at a bargain, a Second-hand Half-Medium (largest size), Ruggles' Engine Job-Printing Press, of most approved pattern. It is in excellent condition, and warranted to work as good as new. Apply soon, at the office of the Mining and Scientific Press. 19v11tf

DEEP MINING.—The Eureka mine, of Amador, which, we believe, has, almost from its first opening, continued to be the deepest mine in California, is now down over 1,000 feet, and is still found to pay as well as at any point of lesser depth. We believe the rule holds, thus far in California, almost without exception, that after any considerable depth has been attained, there is no depreciation in profit perceptible—the increasing yield of the mine making up fully for the increased expense of working at a greater depth. This rule holds good, especially in Grass Valley.

GEOLOGY TO BE POPULARIZED.—It is stated that Theodore S. Fay, a writer known well to readers of twenty years ago, and who for nearly a quarter of a century has resided in Europe, is engaged upon the preparation of a series of text-books on geology, which promises to be in advance of anything hitherto known, and which will sweep all rivals from the field.

FARMING PROSPECTS.—The Stockton *Independent* says, during no winter, since we became acquainted with the San Joaquin Valley, have the prospects of the farmers been more auspicious than they are at present.

THE States of Connecticut, Iowa, Wisconsin and Minnesota, have voted against negro suffrage. The people of Colorado Territory also made the same expression of sentiment in their late vote adopting a State Constitution.

MINING SALE.—One-half of the Shanghae quartz mine, near Yankee Hill, Tuolumne county, has been sold to a San Francisco party for $25,000. George Morgan and J. B. Douglass, of Columbia, were among the owners.

MONTANA.—The Territory is without a Legislature, or the power to call one. An Enabling Act, by Congress, is the only way suggested to overcome the difficulty.

OUR NEW YORK AGENCY.

Mr. GEO. M. NEWTON is our authorized agent in New York City, and will receive advertisements and subscriptions for the MINING AND SCIENTIFIC PRESS at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "STOCKHOLDER," No. 72 William street.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

THOS. B. BISHOP, Attorney. 2v12-4w

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by C. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Dennison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

PORTER & HOLLADAY, Attorneys for Petitioners. 2v12-4w

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the GOLDEN ERA.
" Professor Clearquill." in the Golden Era.
" Dogherry," in the Golden Era.
" Alice Mason," in the Golden Era.
" Hugh Humphrey," in the Golden Era.
" Bill Dadd," in the Golden Era.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

GOLDEN ERA BUILDING,

No. 543 Clay street, near Montgomery, San Francisco

M. of said day, to pay said dshnquent assessment thereon, together with costs of advertising and expenses of sale.

N. C. FASSETT, Secretary.
Office, 402 Front street, San Francisco, Csl. jan20

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being nne block south of our forme location), where we may now be found, with more eommodious apartments and an extensive Joa Printing Office.

San Francisco, April 10th, 1865.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

Book Printing should be considered and treated as one of the higher branches of the "Art of Arts," and its execution entrusted only to experienced and intelligent workmen. Strict attention will be given to all orders for Book and Pamphlet Printing entrusted to the Mining and Scientific Press Job Office.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on hi coast.

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpina County, Cal.
Assessment Nn. 9.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 26th day of December, 1865, an assessment of ona dollar ($1) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, only.

Volume Twelfth.—The Mining and Scientific Press, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons" its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Goldea Era.

N. C. FASSETT, Secretary.
Office, 402 Front street, San Francisco. jan13

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangereus to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Economy in Advertising.—The Mining and Scientific Press is the best and most economical mining advertising medium in this city. Our terms are less than one half the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Postponements.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

Oxford Beta Tunnel and Mining Company, Esmeralda District and County, State of Nevada.

Notice is bereby given, that at a meeting of the Board of Trustees of said Company, held on the 8th day of January, 1866, an assessment of fifty (50) cents per share was levied upon tha capital stock of said Company, payable on the 9th day of January, 1866, in United States gold and silver coin, to the Secretary, or tn tha Superintendent at the mine.

Calendars for 1866.—The Mining and Scientific Press Job Printing Office is prepared to execute every manner of Counting-house Calendars and advertisements for various business men, on short notice and moderate terms.

CURIOUS PHENOMENA.—The Milton hoisting works were burned, at Gold Hill one night last week. After the fire had almost died away, the attention of a great many persons was attracted to a column of light that shot up from the ruins and seemed to be about four feet in diameter and several thousand feet high. After the building was demolished, the timbers in the shaft took fire, and the fire in the shaft naturally gave a tremendous draft to the atmosphere, the Milton works being connected with the Crœsus by a drift—hence the phenomena.

LIFE is a fading tint and fleeting form. It is the blue on the grape; the blush on the rose; the foam on the wave, the beam on the cloud; the smoke on the wind, or arrow in the air.

Deserved Testimonial.

GRIZZLY FLAT, Oct. 18, 1865.

MESSRS. HUNGERFORD & HENDY—*Gentlemen:* We have run your Concentrator for several days past, in our 5-stamp Mill, and, as far as can be ascertained at present, it is a perfect success. When running at the rate of from two hundred and ten to two hundred and twenty-five revolutions per minute, we have lost neither quicksilver nor sulphurets. Formerly, when using copperplate riffles and blankets, we found that in spite of the utmost precaution, quicksilver would escape over them all. Wishing you all success, we remain Your obedient servants,

E. A. BIGLER.
17v11qy S. F. DAVIS.

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, Intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflamatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Cholera and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or disease peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

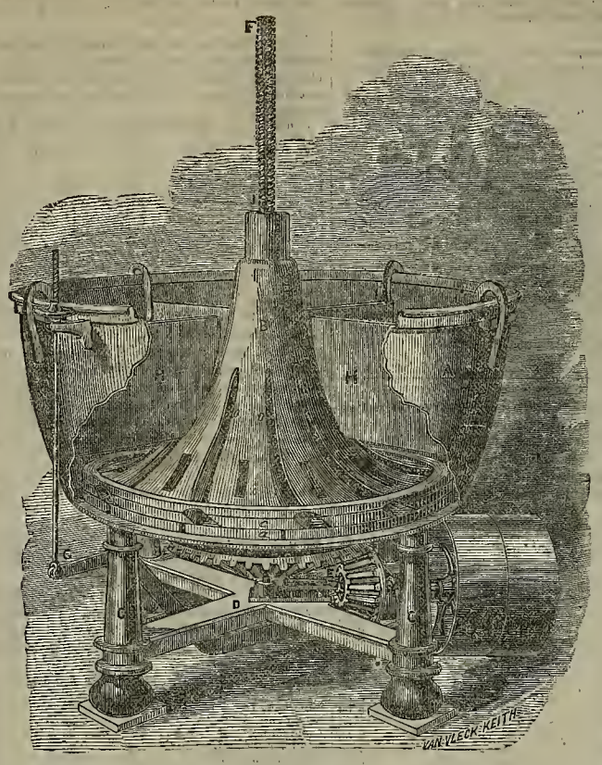
I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works.

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

ENGRAVED TO ORDER.—Persons who desire to illustrate their individual establishments or business, should give us their orders for Engraving and Printing, and we will guarantee good work and reasonable prices.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st

THE Sacramento *Bee* says that there are in the State ninety millions of acres adapted to agriculture, of which over six millions are under fence. During the year 1865, twelve millions bushels of wheat were produced, eighteen millions of barley, two million gallons of wine from thirty millions of vines. There were in the State two millions of sheep, from which the wool-clip was ten millions of pounds.

THERE are in San Francisco fifty-two military companies. Forty-two companies are organized into regiments and battalions, the other ten companies being unattached.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, Mr. TURNER HAMILTON, at the Assembly Building, 108 South Tenth street, Philadelphia, Pa., where SAMPLE copies of our publications can always be found.

Traveling Agent.

MR. ROBERT LATTIMORE is now on a canvassing tour for the PRESS through Butte, Colusi, Tehama, Shasta, and Siskiyou counties, and we recommend him to the favorable consideration of our friends.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1864, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales o mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEE and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet having been recently enlarged to the size of Harper's Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

DEWEY & CO.,
4v11 Office Mining and Scientific Press.

MINERS

Who wish to erect Quartz Mills, Concentrating or Smelting Works, will find it to their interest to consult the undersigned, as to the best and cheapest mode of Reducing Ores. Being acquainted with all the modern improvements of Europe and America, in Mining, Machinery and Metallurgy, I undertake the erection of any kind of Works, and warrant their successful operation.

Gold, Silver and Copper Ores bought in any quantity.

Assay of Ores made by a new Fire Process in half the usual time, an . at half price.

Apply to J. MOSHEIMER,
23v11qy 423 Washington street, San Francisco.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste tree gold and amalgam is amalgamated on the copper plates; nat race of grounid mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

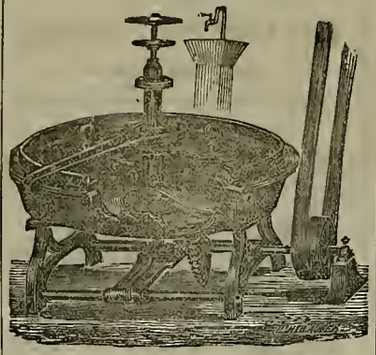
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in paris convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quautity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jellerson Mining Company, Bowman's Ranch, Nevada County; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.

Address,
BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

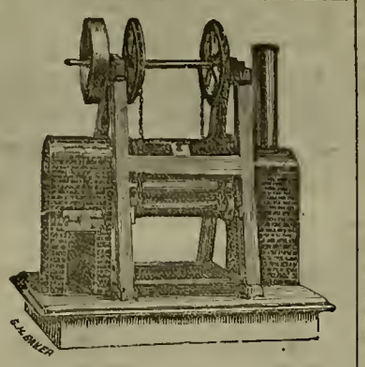
The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 410 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,
No. 23 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

Portable Steam Engines!

"Hoadley's" and "Hittinger's" Make,

COMBINING THE MAXIMUM OF EFFICIENCY, Durability, and Economy, with the Minimum of weight and Price.

These Engines are favorably known, a large number being in use on this coast for hoisting, pumping, threshing, milling and mining purposes.

Steam can be got up on these Engines in fifteen minutes after reaching the place of operation, and the time, expense of setting boilers, machinery, and "construction account" saved, (which is often the difference between the successful and unsuccessful prosecution of milling enterprises,) in fact, the portable principle is the pioneer's friend, and enables him to draw engines on their own wheels to his cabin door, and plant on the outermost confines of civilization the saw and grist mill, and it has done and will do more to help subdue the continent than any other of the modern motors which are crowding society and normalizing the world.

All sizes on hand from 3 to 30 horse power, with and without carriages.

Also, Portable Saw and Grist Mills.

For sale by TREADWELL & CO.,
3v12-3m Corner of Front and Market streets.

Stevens' Pressure Packing.

Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight,

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they an be seen, at any time, in course of construction.

10df ANDREW STEVENS.

SALMON'S
PROPELLOR AMALGAMATOR
— AND —
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

9v11 J. & W. C. SALMON.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlers for themselves, at the PACIFIC FOUNDRY,
1v1 San Francisco.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day,

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 23 Second street, San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

HYDRAULIC MINING AT SUCKER FLAT.

In copying a short paragraph, two weeks since, from the Marysville *Appeal*, in relation to the sale of a portion of the interest in the Squaw Creek Hydraulic Mining Company, located at Sucker Flat, Yuba county, we were inadvertently led into an error. We are now enabled to give a correct report of that transaction.

S. B. Clark sold his interest (four-fifths of the claim) in said company to an association of Eastern capitalists for $170,000, of which sum $115,000 was paid in gold, on the 23d of December last, at the Bank of Wells, Fargo & Co., in this city; $55,000 was paid in currency in New York. The remaining one-fifth of the mine is owned by Col. A. F. Williams, who negotiated the sale of Mr. Clark's interest, and has further provided that the purchasers of that interest shall furnish a working capital of $30,000 in gold, to develop the mine, without any assessment upon his own interest until the $30,000 shall have been fully expended. It is thought, however, that the mine can be successfully worked through an upper tunnel, now nearly completed, and which will be able to furnish sufficient means to drive in the lower tunnel (partially constructed), so as to open the mine at the bottom or bed rock. The Squaw Creek mine is immediately adjoining the celebrated Blue Gravel company's ground, and supposed to be equally rich, if not richer, than that celebrated mine.

Both these mines are located on Sucker Flat, a few rods to the north of the road from Marysville, where it passes through Smartsville. The district comprises the most extensive and best-paying hydraulic diggings in the State or the world. The most of the work hitherto done here has been confined to what is called the "upper bench," which rests upon a thick bed of pipe clay, below which, where the gravel has been reached, it is found much richer than above. There are some fifteen companies now at work there—the Blue Gravel company being the only one which has got well to work in the lower bench.

The deposit of gravel is from 100 to 160 feet deep, containing fine gold from top to bottom, and by washing large quantities with comparatively little expense, the net profit to the miner is large. We may instance the Blue Gravel company, which, in about seventeen months, took out $405,000; of which amount they paid to their stockholders $310,000, requiring but $93,000 as working expenses. Their claim is very extensive, and many years will be required to work it out.

The Squaw Creek mine is equally extensive, and not less than twenty years will be required to exhaust it. The purchasers are among the wealthiest capitalists of Pennsylvania. Work by the new company has already commenced, under the superintendence of Col. Williams who, we presume, will be continued in charge by his Eastern associates. It is gratifying to note that the attention of Eastern capital is being called to the worth of our deep gravel workings, as a source of permanent and profitable investment.

PLENTY OF WATER.—The late heavy rains have dispelled all apprehensions of a drought among the farmers, or any lack of water for mining purposes in the mountains. The quantity of rain in the interior has exceeded 20 inches—in this city about 15½ have fallen. These amounts are about the usual proportions of water which fell in the interior and on the coast of California.

THE HUB.—The Iron Mountain of Missouri is said to be exactly in the geographical centre of the United States. It is an almost solid mass of specular iron ore, rising from a level plain 260 feet. Its base covers 500 acres. The ore contains sixty-seven per cent. of iron. It may very appropriately be called the Hub of the Union.

GOLD YIELD OF OREGON. — The Dalles *Mountaineer* gives tables, showing that the gold yield of Oregon is $6,450,000. The miners of Southern Idaho are not included.

Mr. I. N. Hudson, is authorized to solicit subscriptions, advertising, etc., for the MINING AND SCIENTIFIC PRESS, in San Francisco, and to receipt for the same.

MONEY BY MAIL.—Subscribers and advertisers remitting us money in less sums than $50, can do so by mail at our risk, if they will register their letters; we will take no risk on unregistered letters, or letters by express. Remittances by express must be prepaid.

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

ANNUAL REPORT

—OF THE—

Pacific Insurance Company.

IN COMPLIANCE WITH THE ACT OF THE LEGISLature of the State of California, entitled "An Act concerning Corporations," passed April 22, 1850, the Pacific Insurance Company of San Francisco makes the following Annual Report:

I.—The amount of the Capital Stock of this Company is SEVEN HUNDRED AND FIFTY THOUSAND DOLLARS, and paid in GOLD.....$750,000

II.—The amount of the Assets is ONE MILLION AND FIFTY-ONE THOUSAND, FOUR HUNDRED AND TWENTY DOLLARS AND THIRTY-SEVEN CENTS..$1,051,420.37

III.—The Company has NO DEBTS.

IV.—The amount of insurance effected during the year, and which remained in force December 31, 1865:

Fire.....$12,973,949

Marine..... 484,408

This Company commenced underwriting Marine Risks, August 1, 1865:

V.—This Company insures against the following risks, viz.: BUILDINGS, HOUSEHOLD FURNITURE, MERCHANDISE, RENTS, LEASEHOLDS, VESSELS IN PORT AND THEIR CARGOES, and other PERSONAL PROPERTY, AGAINST LOSS OR DAMAGE BY FIRE.

Also, on CARGOES, TREASURE, COMMISSIONS, PROFITS, and WAR RISKS, and ON ALL MARINE AND INLAND NAVIGATION RISKS, TO AND FROM ALL PORTS IN THE WORLD.

VI.—This Company will take on any FIRST-CLASS RISK not to exceed $75,000 (the limit fixed by law), and on all large risks will reinsure to an extent consistent with PRUDENCE in other RESPONSIBLE COMPANIES.

J. HUNT, President.
A. J. RALSTON, Secretary.

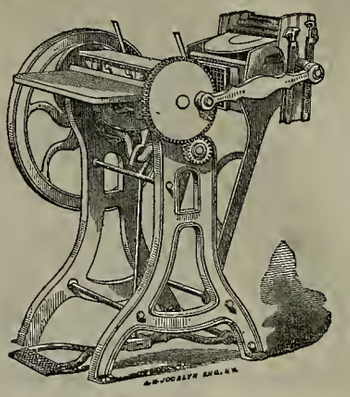
JOB PRINTING

—FOR—

THE PEOPLE!

Mining and Scientific Press



JOB PRINTING OFFICE,

505 Clay Street,

(Southwest corner of Sansome street, on 2d floor,)

Formerly WATERS BROS. & CO.'S.

We are now prepared to offer customers the most favorable inducements to patronize our Book and Job Printing Establishment. Our office is supplied with an EXTENSIVE assortment of Type, and the BEST style of Presses for book work and

CHEAP AND RAPID PRINTING.

Patrons will always find us well up to the times, ready to execute superior work, and furnish the same as cheap as any prompt and reliable firm in San Francisco.

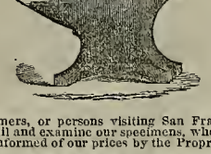
Our aim is to SUIT OUR CUSTOMERS in regard to style and prices, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.

We give especial attention, when desired, in assisting parties in making up or revising their copy. Particular care will always be given to the publication of

LAW BRIEFS,
CERTIFICATES OF STOCK,
MISCELLANEOUS BLANKS,
BLANK BOOKS,
MINING BLANKS,

BOOKS,
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages can be forwarded by mail at small expense.



City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

The Gold Mines of Siberia.

The gold mines of Siberia are of immense extent, and undoubtedly of great richness. The opening of the mines, by a late Imperial decree, to the public, or at least to Russian subjects, the probability that the improvements in gold mining in California will in time be introduced in Siberia, and the increase in the trade of Northern Asia, with the establishment of the telegraph and ocean steam lines to connect that continent with America, give an interest to everything relating to the Siberian gold fields. We therefore give the following from an abstract of a lecture by Professor W. W. Smith, published in the London *Mining Journal*:

"It was not until the early part of this century that the Governor of the district was induced by a merchant to send an expedition in search of gold. The expedition was sent, but it was unsuccessful, and nothing was done further in the matter until the year 1816, when a peasant, out shooting, killed a grouse, which he presented to the Governor. When it was opened to be cooked, in its stomach were found pellets and grains of gold, and from this curious coincidence dates the present energetic working of the gold mines of the Altai.

The mines are situated near the town of Yeniseisk, towards the Eastern Altai Mountains. The gold occurs, for the most part, in a peculiar suspicious-looking sand, at the foot of the mountains.

The thickness of the layer of sand is very variable; the upper part of it will not contain any gold, and only in the bottom two or three feet will it be auriferous. The average yield of gold is about one part in five thousand of dirt. The sand is washed in machines exactly resembling the Cornish tin streamers tye.

As to the profits of mining in this district, it will be better to mention a special instance, in which a piece of ground was tried, 60fms. long and 40fms. wide. The overburden of this piece was 160 cubic fms. and the sand to be washed was 120 cubic fms. The time required to conclude the undertaking was about eighty days. The hands required to accomplish the work were—1,130 full shifts of men at 9½d. per day, and 4,000 half-shifts at 6d., which will give as expenses in wages £144 16s. Materials were as follows: Bar iron, £3; charcoal, £15; medicine, £6 9s.; general expenses, £2 0s. 5d; making a total cost of £171 5s. 5d.

The value of the gold obtained from the sand was £1,182, and on deducting from that sum the cost of working, the sum of £1,011 14s. 7d. remains as profit to the owners of the mine. From this it will be evident that when the supply of gold is, as here, tolerably good, the speculation is very remunerative. Adventurers must, however, remember that, although the foregoing is an average profit, there are times when the results are not so satisfactory. The men are paid, not by the day's work, but for a given task, and they are not paid at the mines, but at the town, situated some distance from them. The season during which the mines can be worked is limited. Of the character of the miners not much that is favorable can be said. Their state of education is very low, and but few can read or write. Many of them are convicts, and so the community is not of the most peaceable character. But there is, for even the poorest, a chance, by steadiness, to recover their lost position, and an opportunity offered of getting out of their depraved state."

HENDY'S IMPROVED PRATER CONCENTRATOR.

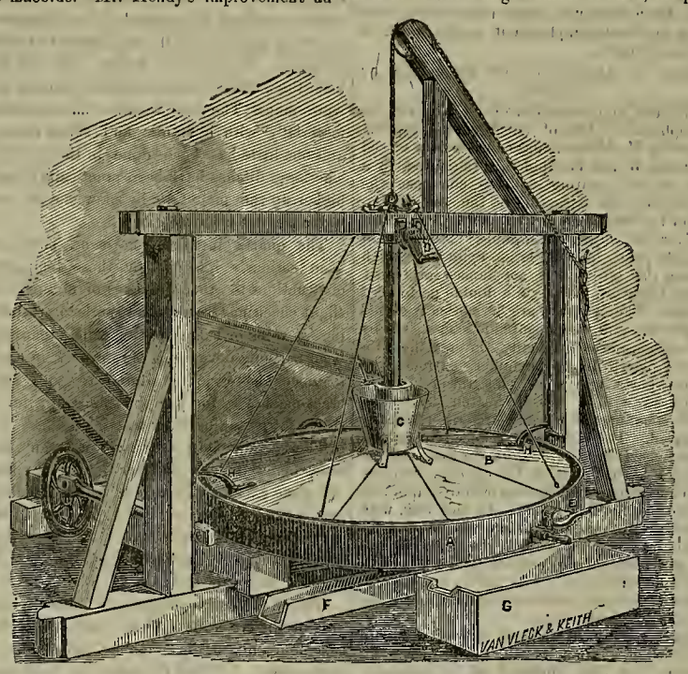
We give annexed a representation of Hendy's improvement on Prater's sulphuret concentrator. The improvement consists in an arrangement for discharging the sulphurets, at intervals as frequent as may be desirable, without stopping the machine. The mode of feeding this machine, through the hopper C, and thence conducting the sands over the distributor B to be deposited about the periphery of the pan, is familiar to most of our readers. The machine, it will be recollected, has its discharge of water at its centre, while the sulphurets gold and amalgam have heretofore had to be taken out by hand from the circumference; to do which it was necessary to stop the machine. Mr. Hendy's improvement admits of this being done while the machine is in motion, and in fact by means of its motion, slightly varied, by inclining the pan from its horizontal position, just sufficient to throw the sulphurets to one side, when, by opening the discharge gate E the sulphurets readily run off and are caught in the box G; the amalgam and quicksilver may, with the same facility be discharged through the plug which is placed just below the sulphuret discharge gate. Below both of these discharge openings is a horn-shaped trough or bowl, not exhibited in the engraving, for the purpose of receiving the amalgam and quicksilver, and preventing its becoming mixed with the mass of sulphurets in the box G.

This change in the position and motion of the pan is readily accomplished by turning the crank handle D a few times, which, by a screw, inclines the upright shaft of the pan, and of course the pan itself to the necessary angle for accomplishing the discharge. The motion of the pan, when so poised, is very much like that given by the miner to the ordinary pan, when "panning out."

Mr. Hendy has also made a still further improvement, which consists in a slight alteration in the shape of the pan itself, whereby its discharge of sulphurets can be made constant and self acting, the directions for accomplishing which are given as follows:

First, set the pan level, by its inner rim; *second*, while in operation keep the Pan A half full of sulphurets; *third*, open the gate E sufficient to discharge the sulphurets, as they may accumulate over the amount above mentioned; *fourth*, the step of upright shaft to be so fitted in the timber as to allow it to adjust itself to the connecting rods; *fifth*, the crank shaft to make 225 revolutions per minute.

This Concentrator appears to be meeting with very general favor throughout the mines. It is in use at a large number of mills, the proprietors of which unite in testimonials in its favor. Two of these Concentrators were ordered recently by Messrs. Goddard & Co., of this city, for their mill (Independence Mill) near Sonora, Tuolumne county, which are now being fitted up at the Pacific Foundry. These parties have extensive experience in quartz machinery, and have concluded to use these Concentrators in preference to others.



Messrs. Bigelow & Bro., of this city, who are now using two Concentrators at the Coney Mill, Jackson, Amador county, have also given further orders to Mr. Hendy.

We have also other and especial testimonials in favor of the improvements of Mr. Hendy, which may be readily attached, with little expense, to Prater Concentrators, which have heretofore been worked without them. This machine, with Hendy's improvements, may be seen in operation at the Golden State and Pacific foundries in this city.

There is scarcely a farmer in the State but has plowed up new land in addition to that of last year.

PHARAOH'S SERPENTS.

In 1821 Prof. Woehler, then a young man at Heidelberg University, discovered that a mass of sulpho-cyanide of mercury, if set on fire, would swell up enormously, enlarging its volume many fold. When Prof. Joy was attending lectures at Heidelberg, he saw the experiment, and has since been in the practice of exhibiting it to his class at Columbia College. Recently, a very ingenious Frenchman has adopted the plan of putting little cones of the substance into boxes, and selling them for a franc apiece, great numbers of which are sold. The cone, about an inch in hight, is placed on a plate and lighted at the top by a match, when it begins to burn slowly with a pale flame, and to swell, presenting the appearance of a serpent crawling from out the plate and writhing in painful contortions; this is continued for perhaps a minute, when the crooked serpent has reached a length of about a foot, with a diameter of half an inch. In the process, nitrogen is driven off, with a very little sulphide of carbon and vapor of mercury; the mass remaining is sulphide of mercury.

The affair furnishes a very pretty philosophical toy. It has been introduced as such, to a limited extent into New York; but has not yet been introduced into this city. Dr. Lanszweert, who resides on Silver street, however, has received several from a friend, and has now at his office one of the "Serpents" formed as above, which is quite a curiosity.

As these things are likely to be soon introduced into this city, it may not be inopportune, even at this early day, to caution the public against the injurious effects produced by burning the toy in close rooms. Persons cannot be too careful respecting the inhaling of even small quantities of mercury vapor, which is thrown off in considerable quantity during the combustion. Miners will understand the deleterious effects of inhaling such vapors. But there are various compounds of mercury, of which this is one, which are even much more deleterious to inhale, than mercury in its ordinary state. Two German gentlemen, who were in a London laboratory, in the preparation, for a scientific purpose, of volatile organic mercury compounds, were recently poisoned by the accidental absorption through the lungs or skin of very small quantities of the vapours of these substances. The symptoms characteristic of this form of mercurial poisoning are of the most painful and distressing kind; the first patient died in a state of mania shortly after his admission into the hospital; and the second, on whom the effect became first perceptible three months after he had ceased to work with the substance, now lays in a hopeless state of idiocy. In burning these serpents the greatest care should be taken not to inhale the vapor; and the burning should never be done in a close room.

Free Chilean Ports.—The Spanish blockade of Chilean ports has caused the Chilean Government to throw open certain other ports to trade, free from all duties. This is a bright stroke of policy, which will be very bothersome to the blockading power of Spain. It will let out much copper ore for the English furnaces, and bring in needed supplies of foreign manufacture.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

BISULPHIDE OF CARBON.

BY DR. LANSZWEERT.

[Conclusion.]

RECTIFICATION OF BISULPHIDE OF CARBON.

All the processes described in the last number of this paper produce an impure article, containing sulphnreted hydrogen, and an excess of sulphur. M. Boniere rectifies thie compound in a series of distillery apparatus, heated by water-bath. This apparatus contains solutions of caustic potesh, selts of lead, copper, iron, etc. The vapors nf the bisulphide, in pessing through them, loee their sulphnreted hydrogen and other impurities, and are then condensed in a pure state.

PROPERTIES OF BISULPHIDE OF CARBON.

The pure bisulphide of carhon is a colorless, thin liqnid, thinner than water. Its specific gravity is 1.273; very volatile, and hoils at the low temperature of 108 Fahr., evaporates rapidly at the ordinary temperature, producing an intense cold. It ie of an ethereous and garlic-like oder when pure. When impure, it is extremely fetid, like rotten eggs. It is insoluble in water, hut soluble in all proportions in alcohol and ether. It dissolves phosphorus.

By reason nf this property it has been used in the rectification of amorphous phosphorns, to isolate the ordinary phosphorus of this latter product, which, notwithstanding the continned high temperature required, is always contaminated with a small proportion nf ordinary phosphorus. The eolubility of phosphorus in bisulphide of carhon must be an important improvement in the manufacture of chemical matches. The reduction of phosphorous to its minimnm proportion, also to an infinitesimally minute division, is obtained in this agent; but in its use it must be handled with the utmost care and precaution, *as a solution of phosphorus in bisulphide of carbon is liable to spontaneous combustion*, which may produce the most fearful accidents, es has heppened to the author of these notes in preparing the ahove solution for said purpose.

It dissolves, also, snlphur, iodine, oils, camphor, rosins, hitnminous and aromatic snhstancee, ie useful in the preparation of resinous varnishes, heoanse it evaporates so rapidly in the atmosphere. It is very comhustible, and hurns with a blue flame, producing carhonic and eulphurous aoid gas. The vapor of bisulphide of carbon, mixed with atmospheric air, constitutes a dangerous explosive compound. This property, together with its great volatility, reqnires the most nareful precautions in handling and etorage. The different operations for ite mannfactnre ehould he generally conducted in eeparated and well-ventilated buildings. These precautions are the more to he observed, as the inhaling of thie agent is extremely deleterious to the workmen, producing general debility and the loss of memory. The use of a eolution of narhonate of iron in carhonated acid water, is reoommended as an antidote for these deleteriove effects.

APPLICATIONS OF BISULPHIDE OF CARBON.

Throngh its extraordinary solvent power, this compound has ohtained in industry a large nnmher of applications. Its firet use was the snlphnration or vulcauization of indian-rubher, according to Parker's process, lately perfected hy M. Peromel and Gerard. It is also nsed as a solvent for gutta peroha ,and, as already etated, for the manufaoture of amorphous phosphorns.

Squire recommends it in plaoe of ether, as a solvent for quinine and other vegetahle alcaloids.

An important application of this agent hae heen pateuted hy M. Deiss, for the extraction of the fatty matters from animal and vegetable tissues; also for the preparation of the bones to he nsed for the manufacture of animal charcoal. M. Deiss has established large manufactories for this object—one in Paris, another at Brussels, and one in London. Eight thousand kilogrammes of fatty refuss are daily treated in these manufactories, and the quantity of grease and fatty substances thus recovered is over 600 kilogrammes daily. A fourth establishment by Deiss, under the firm of Daninos & Co., is situated at Pise, where, in forty-eight hours, not less than 35,000 kilogrammes of pressed olives are treated; giving, at each operation, no less than 3,400 kilogrammes of of olive oil. The fatty matter ohtained by bisulphide of carbon contains all the properties sscured by pressure; in some cases, according to M. Deiss, it is richer in stearine.

Thus the oil, which, after many expressions, is still left in the olive ceke, when subjected to the ection of bisulphide, is decidedly richer in stearine; and for this reaeon is preferable for the manufacture of soap. To give an idea of the importance of the extraction of the fatty matter of the refuse, according to M. Deiss, the quantity of oil lost annually is considered above 3,000,000 of killogrammes at Marseilles, and he estimates the quantity lost in the departmeut of Calvados and Nord, ae double that at the former place. According to M. Moussu, bisulphide may he used for tbe extraction of bitumen and sulphur of certain rocks which contain the substances in too small quantities to he extracted hy other means.

To extract essential oils and aromatic principles of seeds, the solving power of this agent could be used in place of an hydraulic press, and Millon hes applied this power for the extraction and isolation of tbe perfume of flowers. At the London Exhibition of '62, some very good samples obtained hy this agent were presented hy Piver, of France.

According to the above, here is certainly an inducement for California investment. The waste of fatty refuse in this city alone is not only considerahle, but also the extraction of olive oil and the manufacture of Castile soap might be made profitable, thus relieving us from the necessity of such importations, and giving profitable employment to thousands of our own people.

METHOD OF APPLICATION OF BISULPHIDE OF CARBON.

Different appliances have been invented for its application. One of most general application is by M. Moussu, and consists of a closed reservoir, for the bisulphide, surmonnted by a vase or refrigerating coil, to condense the vapors after the extraction of the soluble matters of tbe substance in treatment. From this receiver the liquid bisulpbide is conducted through pipee in two large cylinders, which contain the hituminous substances or bones. These latter are placed on a double perforated bottom. The cylinders are hermetically closed on the top, and the bisulphide, coming in by the bottom, raises gradually through the substances placed in the cylinder, extracts the soluble parts, and then runs through tubes connected with a vessel heated by eteam, which is connected with a refrigerator already described. The bisulphide, reduced to vapore, is condensed in the refrigerating coil, and repasses a second time in the cylinder, whereas tbe bones or other substances operated upon are retained in the firet vessel. In this way, with very little loss, the bisulpbide can be used indefinitely. M. Moussu, with the above apparatus, has been able to extract twelve per cent. of bitnmen from rocks, whereas by the old process of distillation no more than seven or eight per ceut. were obtained.

The quantity of the oil extracted by bisulphide of carbon is 40 to 50 per cent. greater than that obtained by the ordinary method of expression, and the residue cakes are of a more nutritious quality, hecanse they retain intact all the azoted principles of the seed. It is true they are not fit for fatting. Bisulphide of carbon, well purified hy rectification, and aromatized with a few drops of essential oil, is an excellent detersive for the house, for any grease or oil spots.

M. Boniere has constructed an apparatus for the extraction by tbis agent of the aromatic principles of pepper, spices, and of other condiments, such as onions, garlic, etc. These aromatic priuciples are then mixed with table-salt, gum, milk, etc., and eold under the name of *soluble spices*.

The venemous proprieties of the bisulphide have been utilized for the destructiou of insects. Wheat and other cereals, according to M. Dozere, can be easily secured and freed from them by being kept in a close room, and infused with a small quantity of this agent—30 grains for ahout 200 pounds. The bisulphide not only kills the insects, but also their larvæ and eggs. The grain, so preserved, when exposed to the air, losee all traces of the bisulpbide.

One of the moet curious applications of this agent, related at the Exhibition of 1851, is its use for silvering by galvanism. A few drops of thie compound added to the silvering solution, gives a very brilliant deposit of silver. It appears that this fact has been simultaneously and independently discovered by M. M. Elkington and M. Lyons of Birmingham.

M. Seyfferth has constructed a steam engine moved by the vapors of bisulphide of carhon.

PRESENCE OF BISULPHIDE OF CARBON IN GAS FROM COAL.

Bisulphide of carbon is sometimes found in operations where its presence is not sought for or expected. In the manufacture of illuminating gas from coal, all the conditions are found for the production of this agent, which contribute a very annoying and deleterious impurity. It can eesily be detected, when so found, by passing the gas through an aqusous solution of potash, which takss up the sulphureted hydrogen; then through an alcoholic solution of potash, which absorbs the bisulphide of carbon, the same being converted into xanthate of potasb.

Tbis salt in the solutions of salts of copper, gives the very characteristic yellow precipitate of xanthate of copper, and a brown or black precipitate, by boiling with solutions of salts of lead. A great many processes bave been devised to destroy this product in the ges. According to James Young, the process of Dr. A. Smith, applied in the gas works of Littleborough, has proved a complete success.

[Written for tbe Mining and Scientific Press.]

Letter from Nevada.

Editors Mining Press:—The new year opens upon us with omens of promise, and it needs not the ken of a prophet to predict that during tbe next twelve months unusual prosperity will attend those who are actively developing the mineral resources of Nevada county. The interest created in quertz mining in 1865, will not culminate in a relapse, or a failure in 1866. The explorations made—if they have not greatly increased the production of gold—have demonstrated the important fact, that the "wealth of the hills" is here, and can and will he revealed hy the judicious outlay of capital, and the employment of skillful labor. The present winter, thus far, hae been the coldest ever experienced here by the white man. The cold weather has interfered materially with hydraulic and sluice mining, and but little has been done in this vicinity. The large ditches have been practically closed, higher up the mountain, by snow and ice, and water has not been plentiful.

The quartz interests, however, have not been seriously impeded by these temporary obstructions to other branches of mining. A slight check has been given to surface prospecting for veins or ledges, hut on claims that have been partially developed, the owners in many instances have not hesitated to go on and erect machinery for pumping, hoisting, etc., in spite of frost, rain, or snow.

The Nevada Quartz Mining company, two miles helow the city, on Deer Creek, are taking out some excellent rock, and their 12-stamp mill is running day and night. The ledge from which they ohtain their rock has been worked for eight years, and still they have not yet reached the water-level.

The Providence company, on the opposite side of the creek, have been engaged for the last four months in opening and exploring tbeir mine. I visited this mine last week, and was surprised to see the amount of labor that had been expended in the several tunnels, in searching for better pay ore, and in the general development of the miue. In the lower tunnel, at a distance of about 400 feet from the entrance, a fine vein two feet wide has heen struck, from which ore is now heing taken. Midway in the upper tunnel, which is 700 feet in length, two stratas of rock have been discovered, in running a side drift at right angles with the main ledge. I saw some beautiful specimens obtained from these stratas, and the indications are that the rock now heing taken out by the superintendent, Mr. Dingley, will pay well for crushing. A contract has heen let to parties to take out 1,000 tons of rock from the upper portion of the claim, delivering it at the mill. The mine is now in splendid condition for the extraction of a large amount of ore daily. There seems, however, to he one obstacle to the success of the company—a very common one, too—and that is the want of means necessary for a vigorous and and thorough development of the mine. To those not familiar with the ups and downs of quartz mining, it appears strange that a ledge fails to pay when there is an abundance of quartz in sight; and when a company, nnder such circumstances, is obliged to increase its indebtedness by further explorations for pay rock, stockholders and novices in mining naturally enough conclude the enterprise a failure, and are in favor of stopping work, or selling out to an "Eastern company." As long as a claim pays well, everything goes on swimmingly, and the one owning the most stock is the most exultant; but let the vein be lost, or poor rock take the place of the dividend paying ore, and they are sick at heart, and throw up the "sponge" at once. I make these remarks, not as applicable to all companies who temporarily fail; but they will apply to not a few.

A recent crushing of 150 tons of rock from the Harvey ledge, at the head of Wood's Ravine, at tbe mill of the Nevada company, yielded $20 per ton. This ledge is supposed to be a continuation of those belonging to the Nevada and Providence companies. Some ten years ago, a rich pocket was struck on the Harvey ledge, and thirteen tons of rock yielded $5,000. The claim is considered very valuable, although without mill or mechinery of any kind.

A recent crushing of 100 tons of rock from the Burrington company's claim, in Willow Valley, gave $3,000, or thirty dollars per ton. About 300 tons, altogether, have been teken from the claim, yielding a trifle over $9,000. No machinery of any kind has been nsed on this ledge, and tbe rock has been extracted from the surface downwerd, to a depth of about forty feet. The ledge varies in width from one to three feet, and pays with a regularity unusual for gold-beering qnartz. The present owners contemplate erecting hoisting works on it immedietely.

The result of a recent crushing of ehout thirty tons of rock from the Carr & Dowd ledge, near the Burrington, gave $600, or twenty dollars per ton. Some ten or twelve ledges are now heing prospected in Willow Valley, with good prospects of ultimate success, and next summer will prove that locality second to none in this vicinity.

The Illinois ledge, situated just ontside of the corporate limits of the city, an old claim that has not been worked for years, was recently purchased by a French company in San Francisco, and is now being thoroughly prospected.

N. R. Ferre, has sold three-fifths of his interest in the California mine, near this city, to J. M. Pattee & Co., of New York city, for $6,000. The two-fifths retained by Mr. Ferre is to be unassessable. Heavy machinery will he placed on the mine as soon es it can he done. The mine was worked years ago down to tbe water level, with success, and no douht is entertained bnt, hy sinking below the present level, it will be found more valuable than ever.

The Pennsylvania company's claim and mill, near Sugar Loaf Hill, was purchased by a few of our citizens, having sufficient capital to develop the mine thoroughly. This claim is believed to he one of the best here, and the rock has always paid well, but the management of the affairs of the old company was so inefficient, and there was such a lack of harmony among the owners, that the sale of the mill and mine became a necessity.

Quartz mining on Little Deer Creek, or near it, is now being carried on to a greater extent, and witb more positive assurances of success, than heretofore. The French company I have previously mentioned, have just completed their steam hoisting works on the General Grant ledge, and are now taking out good pay rock. Immediately above the General Grant, is located the Star ledge—a comparatively recent location. A few tons of rock from this ledge, last summer, taken out from near the surface, paid well, and a tunnel is now heing run, to tap the ledge at a depth of sixty feet from the surface. The Union ledge, higher up the creek, was purchased last spring by a New York company, and a heavy outlay of money has heen made, in order to test the extent and value of the mine. The incline is now down ahout 200 feet, and good ore is heing taken out at tbat depth. Tbe incline is fifteen feet wide—sawed plank and timbers are used for making it substantial and safe—and for size and beauty of construction, it is not surpassed by anything of its kind in this State. The entire hoisting works, machinery, huildings and incline, I am informed, cost $30,000.

The Star Spangled Banner mine, distant but a few hundred yards from the Union, has been, and is still, attracting the attention of capitalists, quartz miners and quartz prospectors, more than any other mine in this vicinity, and perhaps more than any other in Nevada county. It is now owned by four gentlemen, residents of this city, viz.: Messrs. Kidd, Tisdale, Stiles, und Cbandler. Tbeir incline is down 120 feet, or seventy feet perpendicular. The ledge at this depth is six feet wide, and pays from $30 to $50 per ton. The company are now erect-

ing steam hoisting works over the incline, and will soon be able to raise fifty tons of ore daily. They have nearly all their machinery on the ground for a 10-stamp mill, and expect to have it ready for crushing inside of sixty days. Their machinery is powerful enough to drive twenty stamps, which number they will be able to run when necessary.

On Gold Flat, considerable activity prevails. The New York company (formerly known as the Sneath & Clay), are taking out a large quantity of good rock, and their 12-stamp mill is running night and day. Messrs. Kidd & Tisdale are sinking on the Mohawk ledge for another level. On account of the large amount of water they have to contend with in their incline, they intend procuring more powerful machinery for pumping and hoisting.

The old Whigham claim has recently changed hands, and its present owners are actively engaged in preparations for sinking below the old levels, in order to more fully test its value.

Several large ledges have been discovered within the last ten days, in the vicinity of Gregory & Co.'s sawmill, on the Red Dog road, five miles from Nevada. One of them is twelve or fourteen feet in width, and prospects at the rate of $15 and $20 per ton.

The Cement mills, in Little York township, which are worked by water power, have been idle most of the time this winter, on account of the extreme cold weather; but the prospects are that next summer the cement branch of mining will prove itself quite as extensive and profitable as quartz mining.

NEVADA.

Nevada, January, 1866.

[Written for the Mining and Scientific Press.]

Letter from Grass Valley.

EDITORS PRESS:—On Thursday morning of last week, after due consultation, I visited the North Star, better known in this vicinity as French lead, situated some two miles out of town.

On my return thither, I passed the mill and mine of the Rocky Bar company, Mr. A. B. Brady, superintendent. Here I encountered Mr. Poyzer, your local agent, who is employed by this company to keep a general look-out after their gold, (showing, by the way, that they agree with you in your estimate of his integrity,) by whom I was introduced to Mr. Brady, who invited me to call on my return and go with him through the mine.

A mile further on brought me to the

NORTH STAR.

This mine has been worked for twelve years, half of that time by the present owners. The ledge is situated in hard trap-rock, its average strike being east and west, with a dip of twenty-seven degrees to the northward. The thickness of the vein varies from six inches to six feet, averaging twenty inches. The workings of the mine extended to a depth of 668 feet, three working levels being now open, and working. The present superintendent is Mr. Wm. H. Rodder, one of the owners of the mine, who showed me the mill and works above ground, while another of the owners, whose name I do not now remember, went with me through the underground works.

The mill consists of nine stamps, of a somewhat antiquated form, but which seem to do as much work and as well as any of the more modern mills. The method of amalgamating and saving sulphurets is the same as that used in the Eureka mill.

The mine is drained by an engine of sixty-horse power, thirty-four inches stroke, and twelve inches diameter of cylinder, built in in Grass Valley, from designs furnished by Mr. R. himself. The pumping and hoisting machinery throughout is of the best and most perfect character, having been built under the immediate eye of the superintendent, and from his designs. It is intended in the spring to erect a larger mill, as the mine is now sufficiently developed to keep a larger one at work. After dining at the hospitable table of Mr. Ursn, I returned through a snow-storm to Grass Valley, and was present at the mass meeting of miners held for the purpose of electing delegates to the Convention at Sacramento. The particulars of this meeting I have already sent you.

On Monday I set out for Rough and Ready, four miles west of Grass Valley, and at that time below the snow-line, thinking that on this account it would prove a more desirable location for me than Grass Valley, at least for a day or two. This place was formerly noted for very rich placer mines, but most of these have either been worked out, or are consolidated in immense claims of hundreds of acres, and Rough and Ready is now "celebrated principally for its numerous undeveloped quartz ledges, for having one of the best hotels (Walling's) on the Bear River and Nevada road, and for the enterprise, great expectations, and impecuniosity of its inhabitants.

For the purpose of developing the ledges in the neighborhood, and which assays of rock had shown to be rich, Mr. A. A. Smith, who was a member of the last Legislature, erected, soon after his return, a 4-stamp mill, but owing to some defect in its construction, or peculiarity in the rock, he was unable to save a reasonable percentage of the gold indicated by assayers, and the mill had been allowed to stand idle for several months. Last autumn, however, he made arrangements with S. C. Bradshaw, Jr., formerly of the Pacific Metallurgical Works at the Bay, who came up and took charge of the mill, thoroughly refitting every part. It now consists of a battery of four stamps, with capacity for eight, two of Norton's and one Varney pan, and one of "Teal's Amalgamating Tubs," the whole driven by a water-wheel, which would furnish power for a mill four times the capacity of this. Every part of the machinery is constructed in the best manner, and it is to be hoped that the experiments will be more successful this time than before.

On the pans Mr. B. has laid his improving hand, to such an extent that the inventors would scarcely know them. He has taken out the inner portion of the Norton, and increased its depth some four inches, by the addition of a wrought-iron band, thereby greatly increasing its capacity as a grinder, which is its principal use in this mill. The Varney is made to charge and discharge continuously, by openings in the side near the bottom, and in the center of the top, like the Baux & Guiod. Teal's Amalgamator consists of a wooden tub with a cast-iron bottom, on which revolves a flat muller, having radial openings through which the pulp passes down between the grinding surfaces. It is the invention of a gentleman of Virginia City, Nev., and has not yet been fully tried.

In the evening a mass meeting of the miners of the district was held at Walling's Hotel, of which Mr. Ault was Chairman, and Mr. McGuire Secretary. The resolutions adopted by the Grass Valley miners were indorsed.

On Tuesday I returned to Grass Valley, and the next day I spent comfortably housed. Yesterday I visited the Houston Hill mine, and to-day the Lucky.

THE HOUSTON HILL MILL

Is located one and half miles southeast of Grass Valley, and is owned by Mr. A. H. Houston, of San Francisco, Mr. Morgan of New York, Captain Lee, and several others whose names I have forgotten. The superintendent is Mr. Wm. Clift. The vein is opened by an incline to a depth of over 300 feet, though the lowest working level opened is 260 feet. The vein is only from eight to ten inches in thickness, but owing to the uniform richness of the quartz it is one of the best paying mines in the district. The last crushing averaged nearly $189 per ton, and Mr. C. thinks that the ore now coming from the mine is still richer.

THE LUCKY.

This famous ledge, located about two miles east of town, is owned by a number of residents of Grass Valley and Nevada, whose names have been published so often that I will not repeat them here. The superintendent is Mr. W. R. Taylor, a practical miner and a thorough gentleman, who very kindly showed me through the works, and treated me throughout with the most polite attention. This ledge was discovered to be of great richness something more than a year ago. It lies in a kind of greenstone formation, and is very irregular in size and position. In many places in the drifts it is six feet in width, while in others it is but a few inches. Its average thickness is about two feet. Its general direction is east and west, with an average dip to the south of fifty-five degrees. The incline is down 180 feet, having been driven straight with an inclination to the perpendicular of forty-five degrees. It will be found necessary, however, to change the direction of the lower part, as the inclination of the ledge is much steeper than was at first supposed. The hoisting works were built at Grass Valley, and are fine specimens of workmanship. The engine is of ten inches diameter of cylinder, and twenty-four inches stroke, estimated at 25-horse power. The company have hired an 8-stamp mill, situated near their mine, where they have crushed over 2,000 tons of quartz, which has paid an average of $30 per ton. Everything about the mine is done in the best and most substantial manner, showing that the "Lucky boys," as they are here called, intend to have a first-class mine if it is to be had.

SAN FRANCISCANS IN TOWN.

There is, and has been, quite a sprinkling of San Franciscans among the guests at the Exchange. Mr. Hunter is here putting up concentrators at the Ophir and Eureka mills. Young Baux is here looking after the interests of the Baux & Guiod amalgamators. Howland of the Miners' Foundry was here last week, on his way to and from the Star Spangled Banner claim, where that establishment is erecting machinery. The well-known mining expert, Capt. Atwood, was also here last week, smiling as pleasantly as ever; but what was his particular object gossip has not yet reported. I have also met several acquaintances in Nevada, among whom is H. L. Hopkins, inventor of the Novelty Amalgamator, who is superintending the erection of Captain Kidd's new works at the Star Spangled Banner claim. May they come often. The people are glad to see them, as they are a sure indication of increasing prosperity of our mines. Yours, D.

Grass Valley, Jan. 19, 1866.

[Written for the Mining and Scientific Press.]

Letter from Benicia.

MESSRS. EDITORS:—When I left your city last week, to take a prospecting tour to the mountains, I promised to pencil some hurried notes by the wayside for the PRESS, or rather for your own private ear, to be pruned, cast aside, or interwoven, as your judgment might dictate. I feel almost discouraged, when I find myself so differently situated from others in their quiet studios—surrounded with all necessary book-conveniences and appliances for epistolary correspondence; you, who have often written on the car or in the noisy bar-room, will fully appreciate the difficulties. Besides this, in turning "prospector" I was entering upon a business to me comparatively new and untried. My heart was not very light, I assure you, and my purse was lighter. But don't imagine that I have no gold in the *banks*, or in their *branches*; I certainly have as large deposits in some of our "branches and in their banks," as any other miner, and am as rich in feet as a centipeda. The truth is, it is somewhat dangerous, these hard times, to travel with money about you—you might get robbed. Miners and prospectors, like myself, are not selfish. Neither are you, and others who delve deep for truths—for truth's and science's sake—and for their effects upon the general good. In a pecuniary sense, your reward is small. You labor assiduously from day to day, to gather facts bearing directly upon the material prosperity, and indirectly upon the intellectual progress, not merely of our own coast, but of the whole human race—shedding light upon our vast mining, petroleum and mechanical interests, and on the various branches of physical science, and of the arts; and from these you deduce principles, leading to greater economy and efficiency in developing the resources of the country, thus adding to its general wealth, and giving remunerative employment to a larger population.

A prospector has no time to write, much less to philosophize. It is a little too *deep* for him. Surface diggings suit him best. He, finds a lead, knocks off a specimen for assay and hurries to the next new district. I will now briefly sketch a little of what I have seen and done. I have only time to say a few words as to

HOTELS, ETC.

The American is closed for the present, and will soon be offered for sale. The Solano, under the care of my accommodating hostess, Mrs. Minmann, is, in truth, the *only* hotel in the city, and is admirably conducted.

This place is well supplied with

FLOURISHING SCHOOLS,

Public and private, Catholic and Protestant. Mr. Rose is Principal of the Public School, and gives, as far as I could learn, universal satisfaction to his patrons. Miss Atkins, long known as a popular teacher of young ladies, has sold her Seminary to Rev. Mr. Mills, late of the Sandwich Islands, who has re-opened the same with very flattering prospects. I had the pleasure, in other days, of visiting Mr. Flatt's Collegiate Institute, and of witnessing his tact—a rare and happy faculty—in enlisting and fixing the attention of the pupil, and fastening the thought in the mind while fully aroused, and allowing it no time to relapse into listlessness. This well established school is, as usual, in a very prosperous condition, and will not be able to accommodate many more from abroad, unless the already very commodious premises be enlarged.

THE MILITARY.

The soldiers, as you are aware, have been removed from here, which gives the place a duller aspect than formerly. At the Ordnance Department I met the fascinating, gallant Colonel R. A. Wainwright, of the U. S. army, and also Rev. Mr. C., before whom I was not as reverent as I might have been. The fact is, a waggish soldier pointed him out as one who could give me any information as to said Mr. C.'s whereabouts. As his reverence was dressed in an officer's uniform, and perceiving from the questions propounded to him that my mental perceptions were somewhat obscured, and as he enjoys a joke, he became so amusingly droll, and put on such a quizzical look, in consequence of the good-natured perplexity of your "prospector"—all so different from the "long face" expected—that the delusion was for a time increased. When the light did at length suddenly burst upon my hitherto obtuse and now astonished mental phiz, I guess we laughed. The scene is easier imagined than described.

PACIFIC M. S. CO.' WORKS.

Here, (and I might have said the same of the barracks), everything throughout all their different branches, exhibited a neatness, order and system, which do great credit to the very efficient superintendent, Mr. James Pollock, and his associates. I should like to say more, but this letter is already too long.

CONCLUSION.

Thanks to Mr. Sunborn, pioneer newsman, on whose counter the MINING AND SCIENTIFIC PRESS is found, to his associate, agent of Wells, Fargo & Co., and many others, for kindnesses and courtesies shown, and information and counsel cordially tendered.

PROSPECTOR.

Benicia, Jan. 16, 1866.

CONSUMPTION OF IRON.—It is estimated that the consumption of wrought iron, not including railroad iron, in the States of California, Nevada and Oregon, is 10,000 tons per annum, all of which is imported. The average value of this iron is at least $80 per ton at San Francisco, or $800,000 per annum is paid for an article which should be manufactured at home. There is shipped annually from San Francisco from 1,200 to 1,500 tons of scrap iron, worth $10 per ton. This goes to the rolling mills at the East, paying several profits and probably returns again to California. There are now some three hundred miles of railroad, inside and main tracks, which require at least 27,000 tons of rails irrespective of chairs and spikes. These require replacing at least once in eight years. As roads are rapidly increasing, the amount of iron used will increase in proportion. These figures indicate that a rolling mill would be profitable at the Bay city.

SINGULAR CAUSE.—The telegraph announces a tremendous explosion of a locomotive boiler, at Terre Haute (Indiana), which was quite destructive, throwing off the roof of the building, spreading the wall, and scattering freight, timber, brick and mortar, books and papers, in all directions. The most singular part of the announcement, however, is the cause which has been assigned for the catastrophe—"the extreme cold weather."

AN ingenious contrivance has been made by two Parisians. They blow a small globe within a decanter or claret-jug. This globe, which has its opening in the side of the larger vessel, serves to hold a freezing mixture to cool wine or water in summer, and in winter may be filled with warm water to take the chill off.

A FINLAND newspaper mentions a stone in the northern part of Finland which serves the inhabitants instead of a barometer. This stone, which they call Ilmokiur, turns black, or blackish gray, when it is going to rain, but on the approach of fine weather it is covered with white spots.

THE FIRST IRON SHIP.—John Wilkinson, of Castlehead and Broseley, known as the great ironmaster, is said to have built the first iron ship, which was launched in July, 1787.

IT is estimated that, at the present time, vessels are being constructed in French yards for Prussia, to the amount of $5,000,000.

MOST metals unite directly with phosphorus when the latter is thrown upon them while in a state of ignition, or when they are heated in its vapor.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular of the Associated Brokers."

SAN FRANCISCO, SATURDAY MORNING, February 3d, 1866.

Our local Fire and Marine Insurance Companies have made their usual annual statements, as required by law. Their several exhibits furnish much interesting data concerning the rapid growth and present expansion of the business of Underwriting upon this coast. Heretofore we were exclusively patronizing foreign companies; but now resident capitalists find this interest very productive, and are prosecuting it with great energy. In addition to the following figures, other details will be found in another portion of the Circular.

Annual Statement of the Insurance Companies of San Francisco for the Year 1865.

NAME OF COMPANY.	Capital Stock.	Am'nt paid in to Dec. 31st.	Cash Assets.	Amount required to reinsure outstand'g risks	Amount of outstanding risks.	Amount of risks written during 1865.
Pacific	$750,000 00	$750,000 00	$1,051,420 37	$126,994 86	$13,458,857	$15,446,521
Union	750,000 00	450,000 00	502,461 04	no report.	3,720,117	3,953,762
Fireman's Fund	500 000 00	500 000 00	635,373 74	61,000 00	6,875,519	6,804,914
Merchant's Mutual	400,000 00	250,000 00	287,291 85	35,000 00	1,274,926	3,915,594
California Home	300,000 00	300,000 00	346,032 41	20,000 00	3,140,310	no report.
Occidental	300,000 00	60,000 00	75,800 41	13,970 00	2,183,542	2,245,000
Home Mutual	1,000,000 00	226,000 00	no report.	no report	no report.	815,420
California	200,000 00	200,000 00	242,990 19	31,229 08	1,742,621	5,644,920
San Francisco	150,000 00	150,000 00	275,808 92	20,312 20	3,411,225	3,342,075

It will he seen from the above, that the cash assets of the different companies, on the 31st of December last, amounted in the aggregate to $3,377,000, and the amount of risks outstanding at that time exceeded $35,000,000. In other words, their assets were less than 10 per cent. of the amount under insurance. The largest company had within a fraction of 8 per cent. of assets, and the smallest about 3½ per cent.

The Mining Share market exhibited unexpected vitality this week, and nearly every stock on the list has been in request at enhanced rates. The short interest has been freely sustained, owing to the readiness which seller's option contracts were taken, but at the close the late advance was not well maintained. The present condition of a number of mines is thought to be more flattering than for some time past, and if more economy and better judgment would now mark the management and general policy of some leading companies, they would soon convince those whose faith in the intrinsic value of a Washoe claim has been well-nigh destroyed, that *money can be earned* over and above current expenses, and that the interests of shareholders are henceforth to be honestly and judiciously protected.

Gould & Curry has been sold within a range of $800, seller 30, and $870 cash, closing at $835 bid. There is now nothing new to report from this claim. A small supply has been accumulated since last dividend day, and the net earnings this month are likely to show an improvement over January.

Savage has been in more favor, and some 135 feet were dealt in, advancing from $645 to $750, then selling at $850@990, and closing at $860. The financial condition of this company is growing more satisfactory, and their indebtedness will, at this time, probably not exceed $75,000, exclusive of some $30,000 due (in monthly installments of $5,000 each) upon the Minnesota mill. Receipts of bullion, last month, amounted to $140,000, and an average of 125 tons of ore is now taken daily from the 1st and lower levels. In the east drift from the winze sunk from the latter station, small seams of ore have been met with. Mr. Alpheus Bull, a gentleman of high standing and well-known executive ability, has been chosen President of this company

Crown Point has also materially improved, steadily advancing from $620 to $835, then changing hands at $870@890, and selling yesterday at $880@810. During the week ending January 27th, 518 tons of ore were extracted from the mine, 363 tons of which came from the lower level. On the vein of the latter the north drift has extended 65 feet, and the south drift about the same distance, showing no material change. In addition to the outside mills alluded to last week, the Succor, Righy, and Merrimac mills have since been employed, giving a crushing capacity in all of say 150 tons per day, including the company's two establishments. The last clean-up of the Rhode Island mill, was $47 per ton, and from the Crown Point, $62. Total yield of bullion last month exceeded $55,000.

Hale & Norcross has been a feature of the market, and some 250 feet were dealt in; advancing from $420 to $580, receding to $500, seller 30, rising to $875, and closing yesterday at $830. Recent developments in the north drift, at a depth of 700 feet (within a hundred feet of the Savage line), are regarded with decided favor. The lode at that point, so far as explorations have gone, looks promising, and is said to be fully 12 feet wide, in breasting out some 15 feet to the north. A recent crushing of ore yielded $55 per ton, and a considerable quantity is now being sent to different mills.

Yellow Jacket rose from $345 to $362, fell to $325, steadily advanced to $465, and sold yesterday at $460@$400. The bullion product of the mine, for the six months ending the 1st ult., amounted to $890,402, from 24,270 tons of ore (an average of $36.68 per ton). Other receipts, from assessment, etc., were $143,495—in all, say $1,033,897. The indebtedness of the company June 30th last, was $379,771, and during the ensuing six months $845,629 were disbursed for extraordinary and current expenses, in part as follows: Improvements to the Morgan mill, $81,636; upon the South Hoisting Works, $80,961; paid for crushing and hauling ore to mills, $425,000; labor, $89,426, etc., etc. The Morgan mill has thus far cost $223,000, and the Central and South Hoisting Works $149,757, which, together with supplies on hand, make up an aggregate of $428,814—equal to $357 per share of capital stock. Receipts of bullion for the weeks ending January 15th and 22d, amounted to $44,459.

Ophir rose from $325 to $430, and was dealt in at the close at $415@385. The yield of the company's mills exceeded $59,000 during the past month.

Alpha fell from $245 to $228, rose to $335, and sold yesterday at $365. Belcher has also revived, advancing from $125 to $210, and then selling at $195@200.

Chollar-Potosi has been very active at enhanced rates, and nearly 500 feet were sold, steadily advancing from $232 to $300, buyer 10, and changing hands yesterday at $280@257½. During the week ending January 26th, 640 tons of ore were sent to custom mills. In drifting west of the Potosi tunnel, in the Grose Roots station, good ore has been found; and also in the new station, 60 feet below that tunnel. The old works, between the 3d and 4th stations of the Chollar, continue to look well.

Imperial has fluctuated but little, and considerable sales were made at $111@120, closing at $113. The indebtedness of this company is now $20,000, less a large portion of the net earnings for January. The yield of bullion during the first three weeks of that month amounted to $49,500. Work has been commenced upon the new shaft. The contract price to sink and timber the work is about $65 per foot, and 100 feet are to be finished monthly until a depth of 1,200 feet has been attained. The dimensions of this monster shaft are 7 feet 4 inches, by 31 feet 4 inches. Empire Mill and Mining Company sold yesterday at $225, and closed at $240 asked.

Bullion rose from $36 to $62, then sold at $55, and closed at $48. Overman rose from $40 to $55, and sold yesterday at $60@50. Pacific Insurance Company was sold at $664. California Steam Navigation fell from 61, seller 60, to 58 cash, rose to 59½, and closed at 60 asked.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last amounted to $925,783.

Endorsement by the Miners' State Convention.

The following resolution was adopted by the California Miners' State Convention, held at Sacramento, Jan. 17th, 1866:

Resolved, That we regard a mining paper or journal of great importance to the mining interest of California, and we recommend the Mining and Scientific Press, of San Francisco, to the consideration and support of the miners of the Pacific coast.

TWELFTH VOLUME.—The MINING AND SCIENTIFIC PRESS, published at San Francisco, commenced its twelfth volume on the 6th last. The PRESS is a large, sixteen-page paper, and is truly a valuable assistant to the mining interests of the Pacific Coast. It is filled with reliable, useful and interesting matter, and to our miners who wish to understand the theoretical, as well as the practical part of their business, the MINING PRESS will be found an invaluable aid. Its correspondents are men of science and learning, and hail from all parts of the coast. It is published at San Francisco, at $5 per annum, or $3 for six months. Address Dewey & Co., publishers of MINING PRESS, San Francisco. [Nyo County News.

Situation Wanted.

AN ENGINEER, who would take charge of a Stationary Engine, in the city or country, for a reasonable salary, desires a situation. Address, "Engine," Box 17, San Francisco Post Office. 5v12tf

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEE and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their Journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as mine owners, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

DEWEY & CO.,

Mining Summary.

CALIFORNIA.

TRINITY.—The *Journal* is calling attention to the undeveloped mines of Trinity, and says: Only a short time since some miners discovered a claim opposite Junction City which pays from $50 to $80 a day. And how was the claim found? Simply by disregarding the advice of "old miners," and working faithfully to open a claim which had been deserted by men who did not possess the same energy and perseverance.

We do not hesitate to affirm that this county offers hundreds of just such opportunities, if we had the right kind of population and enough of it to develop them. No other county offers such inducements to a large mining population as Trinity. A county as large as the State of Massachusetts, every foot of which is more or less auriferous, with untold wealth in quartz, yet with not a single mill, or even arastra, and this extent of territory occupied by some twelve hundred miners. Five thousand could easily find employment, independence and riches within our borders, and even then it would take years to exhaust the surface diggings.

PLUMAS.—The Quincy *Gazette* says: A friend informs us that the region of country around the Premium and Crescent ledge is literally covered with paper titles, sometimes two or three deep. It is undoubtedly a rich section of country, and those who locate should perfect their title by labor and actual occupancy; otherwise, they may have to call in the aid of the law to decide ownership—and law is an expensive luxury now-a-days in this climate.

The Yreka *Journal* says: More Chinamen are being employed this year in this county by white men than ever before, from the desire to get claims worked cheaper. Scott river, which used to be a great field for white labor, is now overrun with Chinaman, who work at so low rates that white men cannot compete.

NEVADA.—We understand that several mines in Grass Valley, and among others the Union, have been compelled, in part at least, to suspend operations for the present on account of the great influx of water from the late heavy rains. Their pumps were inadequate to the task of keeping them free of water. Some of the mills are also running short of rock on account of the impossibility of hauling by reason of the bad condition of the roads.

We would call the especial attention of our readers to the summary of mining news from this county, given in another place, in to day's issue, from our Nevada and Grass Valley correspondents.

PLACER.—We learn that quite an improvement in the placer mining prospects are beginning to appear about Yankee Jims and Sarahsville, by reason of the introduction of machinery to work the cement ground, which it has been found impossible to work by the ordinary method of sluicing. Much of the gravel found here is of that peculiar cement character which it is necessary to work over five or six times, at great expense of hauling, etc., allowing it to lay in the meantime through one or more entire season to slack. Even then a large amount of gold was lost.

Something over a year ago, Mr. C. H. Dewey, the conducting manager of one of the principal mines near Sarahsville, decided to put up a crushing-mill, similar to those employed in Nevada county. After a year's trial the plan has been found to succeed well. Crushing the gravel has been found here, as elsewhere, a decided success. This mill employs twenty stamps, driven by a 40-horse engine, although but ten stamps are employed at present. These ten stamps reduce from thirty to forty tons of cement every twenty-four hours.

The Rough Gold company, near by, have also erected a mill which went into operation about three months since; so late in the season, however, that the company have as yet scarcely been enabled to give the new process a fair test. No doubt, however, is entertained with regard to its ultimate success. There are numerous other claims in this vicinity, all of which feel a renewed confidence since the above-mentioned mill experiments, and no doubt is entertained but that other mills will soon be put up, as fast as the different claims are properly opened.

CALAVERAS.—The San Andreas *Register* says Messrs. Knapp, Wilcox & Co., have just completed a mill of six stamps to crush the dirt from their claim, at Yaqui Camp, about a mile and a half from that place. They have some very rich dirt, but it is a kind of cement, so hard that they are unable to save all the gold by the ordinary method of washing. But by the use of the stamps they will be able to make a good thing.

AMADOR.—The *Dispatch* says that an extensive cinnabar mine has lately been discovered near the Boston ranch, about ten miles from Jackson, in this county, which is pronounced very rich by those who profess to be judges of the article; and a company has been organized and will shortly be incorporated for the purpose of working it. Should it turn out to be as rich as it is supposed to be, it would be difficult to estimate the value it would be to this section of the country.

TUOLUMNE.—The editor of the Tuolumne *Courier* recently visited the Bacon mine, at Calder's ranch, about ten miles from Sonora, owned by Messrs. Bacon & Leonard. This claim is a recent location, but considerable money has already been spent in developing it. A tunnel has been driven in 185 feet to the vein, and a cross drift 200 feet each way in length running all the way up the vein, and disclosing a large amount of rock. To this level five chutes have been opened from the surface downward, about 100 feet distant from each other, and connected by stopes at convenient intervals. An incline is being sunk from the northern drift, which is now down about sixty-five feet. Over 400 tons of rock have been extracted, which will now be crushed, and an immense quantity is also in sight. All the work of opening, timbering and ventilating is described as having been done in a superior manner. Good results are confidently expected from this mine.

The same paper, in speaking of the Sugar Pine District, some eighteen miles from Sonora, says it has for several years been noted for the number and wealth of its quartz ledges, some of them having yielded a vast amount of gold, while many others in a less forward state of development give evidence of becoming quite as productive. One of the most promising claims in the district is the Mount Moriah, located in November, 1862, and containing 2,400 feet, situated about half a mile from the famous Excelsior, and about the same distance from Uniontown. The vein has been prospected for the distance of 1,800 feet. Considerable quantities of rock have been crushed, and proved to be rich, and more, of a still better quality, is being daily taken out. This claim will no doubt prove a valuable one. A mill will be put upon the ground in the spring, or sooner, if roads and weather permit.

Gillis Bros. & Co., struck a pocket in the decomposed slate about their ledge, near Tuttletown, from which they have already taken several hundred dollars. The streak is three or four inches wide, and yields from twelve to forty dollars to the pan, and getting richer. Their claim is on the "big lead," and is being prospected with energy. The rock presents a fine appearance, and samples taken from any portion of the ledge show free gold, being almost precisely like the quartz from the Raw Hide Ranch lode.

One-half of the Shanghae quartz mine, near Yankee Hill, Tuolumne county, has been sold to a San Francisco party for $25,000. Gen. Morgan and J. B. Douglass, of Columbia, were among the owners.

AMADOR.—The Jacksonville *Sentinel* says: A few days ago, Sam and John Taylor commenced to prospect a bar on Applegate, a short distance below the Fowler quartz ledge, by cutting a race from the creek. They cut through the rim rock, and in so doing took out about fifteen ounces of coarse gold, varying from the size of a wheat grain to an ounce in weight. They only worked four days.

W. B. Floyd has sold his quartz vein and mill in Hunter's Valley to a San Francisco company for the nice little sum of $24,500. The vein has been paying very well and is considered good property.

A correspondent of the *Free Press* writing from Hunter's Valley says that there are a great many influential men of capital from San Francisco among us, who seem to take an interest in the mines of that region. The "La Victoire" mine looks well, as does the "Blue Lead." The latter, you will hear of in a short time. Mr. Wilson of San Francisco, has purchased the Floyd vein and all the machinery, tools, etc., connected therewith. The Superintendent of the La Victoire, is afloat through the hills and ravines, negotiating for Wilson & Co. It is to be hoped he will succeed in his endeavors to bring to a successful issue what it has taken months to bring down to so low a figure. The Potts, at the Jemisal, looks well, and also the Barrett vein. In fact our Valley is full of mineral and all it needs is *thorough development*.

VIRGINIA CITY AND VICINITY.

It has long been a pretty generally conceded fact that a large amount of loss attended the working of the mills in Gold Hill; but we were scarcely prepared for anything like the following, which we clip from the Gold Hill *News* of the 27th ult:

Last night we were shown about an ounce of soft amalgam which was taken from *one pan* of the tailings caught in the Dayton reservoir. Mr. Andrews is principal owner, we believe, and McLaughlin & Root own one-fourth. This reservoir was put in for the purpose of catching the tailings that flow down Gold Cañon, and the amalgam we saw was taken from one pan of the tailings in this reservoir, by Mr. Root himself. He states that they have already accumulated several hundred tons of those tailings, which are equally rich with those from which the prospect we saw was taken. There is but little doubt that thousands of dollars pass down Gold Cañon every month, and we cannot see why the owners of mills do not catch their own tailings and save them; for in time the tailings that pass down Gold Cañon will be worth more than what is extracted from the ore at the present working.

The Granite mill, Gold Hill, has been closed up, the owners having sunk some $20,000 in cash, aside from their own labor and attention. The *News*, after stating that the proprietors had struggled manfully to make the mill pay, intimates that there must be a screw loose somewhere in the mill, for it is so conveniently located that its profits should be much larger than those located remotely.

It is said that there are about 1,700 men engaged in the mines of Gold Hill proper, extracting about 950 tons of ore per day, which, at $30 per ton, would give a yield of $28,500 per day, or $855,000 per month.

OUTSIDE MINES.—The *Enterprise* is informed by Hon. Felix O'Neil, of the Assembly, that the mines in the Peavine district, near the Truckee, bid fair to prove of no inconsiderable importance in the mining interests of Nevada. There are in that district five principal claims known as the Great Eastern, Develhymer, American Eagle, Enterprise and Metropolitan, which are being worked steadily by the Metropolitan Tunnel and Mining company. The first of these mines located was the Develhymer, in the spring of 1862, by Mr. O'Neil and his associates, and the others are a series of parallel ledges. No work of any account was done on these ledges until last August, after the return of Mr. O'Neil from Austin, when the Metropolitan Tunnel company, in running for the Develhymer, struck the ledge now known as the Great Eastern, which, on being stripped 40 feet by 250 feet, at a depth of 25 feet, disclosed a large body of sulphuret ore, intermingled with desulphurized ore. From this ledge the company are now furnishing the English Mill company, on the Truckee river, with ore which yields from 80 to 108 ounces of bullion to the ton. The mine is but seven miles from the mill, and keeps the latter steadily employed in working its ore.

The Clan Alpine district is about 130 miles east of Virginia and 45 miles west of Austin. It is four miles west of the Overland Mail route. It is a bold, rugged, and mountainous district, but fortunately well wooded and watered—advantages which many other districts do not possess. Until recently but little work has been done in this district. Now, however, New York capital is beginning to make itself seen and felt. The Silver Lode Mining company are sinking a shaft on the McGregor ledge. They are now down 185 feet, and find a ledge between seven and ten feet in thickness, which assays all the way from $80 to $160 per ton. Such rock as this, at such a depth, is certainly encouraging. They can probably sink 100 to 150 feet further before the water level is reached. This company have also a mill in process of construction. It is a substantial stone building, large enough for twenty stamps. But ten stamps will be put in at the present time. The mine and mill are under the supervision of Mr. J. Ingalls, and will be in running order early in the spring. There are several other companies which will commence operations there in the spring.

REESE RIVER.

A mammoth mining association, known as the Consolidated Silver Mining company, has recently been organized under the laws of the State of New York, to carry on the business of silver mining chiefly in the Reese River district and vicinity. The company already own thirty-six ledges, a larger majority of which are located within three miles of the city of Austin. It is the intention of the company to have, at least, four mills running by the first of July next, each with a capacity of reducing twenty-five tons of rock per day. They propose to have two other mills in operation by the first of November next. The capital stock of the company is fixed at $8,000,000, divided into 80,000 shares, of $100 each. Their principal office will be at 73 Broadway, New York, with branch offices in Boston, Philadelphia, Chicago, and Austin. The officers and directors of the company are said to include some of the most substantial men of Boston, Philadelphia, and New York. The most able metallurgical and scientific talent will be employed in directing the works. We should judge, from all accounts, that the association has been started upon a substantial basis. We trust that future events may prove that such is the fact.

We have been able of late to obtain but few items of interest from the mines in the immediate vicinity of Austin. Favorable accounts continue to come in from the outside districts, which appear to be scattered, at intervals, over an immense tract of country, indicating that the mineral resources of that part of the State, when they become properly developed, and provided with roads, facilities of communication, etc., must prove of incalculable extent and importance. We shall endeavor, at some future time, to give some connected and intelligible description of these outside districts—their localities, their degree of mineral development, mill facilities, etc., etc.

ESMERALDA.

The Visalia *Delta*, of a recent date, reports Mr. Wm. Fleming, Superintendent of the Oro Fino Co., of New York, as having lately passed through town, *en route* to Owen's River. A 20-stamp mill and provisions for forty men for six months is on the way in their own teams. They expect to commence operations in the beginning of April next.

The Esmeralda *Union* is informed by parties lately returned from the Hot Springs District, that there have been several large and auriferous ledges discovered in that vicinity. There is a great deal of work being done in that section, and from the loads of bullion they bring up quite often, we should judge that companies there were well remunerated for their labor.

HUMBOLDT.

According to the *Register* the Arabia mines have been sluggish, of late, the boys being somewhat pinched by the extreme cold weather. The ledges, however, have suffered no pinch. Times will be lively as soon as the winter lets up a little.

The last working of Montezuma ore, eighty tons, shows an average yield of $96.04 to the ton. By smelting process, an improvement of about seventy-five per cent. on this rate will be made. Between the lower drift and the one next above, a large mass of their best millable ore has been exposed.

The owners of the "Bald Hornet" (!) have resumed work, and the ledge looks well.

Jersey and Daisy have both struck for better weather.

Under the head of "Bullion from Oreana," the *Register* says that Webber & Co., shipped, by Moyer's express, on the 15th inst., 428.27 ounces, value $371.51.

Montezuma Co., sent, by same, 8,078.28 ounces, value $7,683.40.

A favorable report is made with regard to the progress of work on the Monticello tunnel; the foreman, Mr. J. F. Cole, is reported to have given excellent proof of his ability to conduct a work of that kind.

MINING PROSPECTS IN ARIZONA.—Coulter & Tyson's quartz mill, at Wickenburg, crushed thirty tons of rock from the Vulture lode the first week in December, and cleaned up $2,700. The mill of Bowers Bros., on Lynx creek, is doing well. They are crushing rock of the Accidental lode, which pays about $80 per ton. Everybody is in good spirits at the prospects of the mines. Every indication of richness is shown by the many quartz lodes that are tried. New lodes are being discovered every week, and all show well.

The rich mineral districts, as yet but partially prospected, are the Big Bug, Lynx Creek, Turkey Creek, Hassayamp and Quartz Mountain. In all these there are rich gold and silver mines; but, with very few exceptions, work has been suspended in these districts, and many are now waiting for the time when they can pursue their labor with safety. That there are millions in treasure in those localities there is no doubt, and it is the opinion of all who know anything of mining that superior natural facilities exist here for working the mines to great advantage.

Mechanical.

AN ELECTRIC-MAGNETIC ENGINE.

It is known to many that a well known and ingenious mechanic of this city has been for a long time engaged in bringing to a practical degree of perfection a motive engine to be driven by electro-magnetic power, to take the place of the steam engine. This gentleman has devoted years of labor and a large amount of money in making his experiments, building working models, etc. Several engines, constructed after different patterns with different modes of receiving and delivering their power, have been successively devised by him, and thrown aside as not coming up to his idea of the proper standard to insure their successful introduction. Some of these we have examined either in principle, or as working models, and they all appeared to possess a greater or less degree of merit. We were permitted to examine, a few days since, his last effort; upon which the inventor is willing to rest his reputation, and which he feels confident is capable of being constructed upon a scale of any desired degree of magnitude, from the little model already constructed, up to an engine of sufficient power to drive the largest sea going steamer afloat. According to the calculations of the inventor, in addition to a perfect immunity of danger from fire or explosion, his electro-magnetic engine also secures a large economy of space and weight over the steam engine. The machine, as now constructed, works very much like the double-acting working beam steam engine, having an arrangement something like the walking beam of such a machine, working with eccentrics and cut-offs, and driving the shaft by a crank; by which means any length of stroke may be obtained from six inches to six feet.

It would be impossible for us to give anything like an intelligible description of this remarkable and truly original invention, so totally unlike anything ever before attempted in the way of electro-magnetic engines. By a peculiarity in the form of the electro-magnets used, which the inventor claims as a part of his invention, a much larger amount of power is obtainable than from magnets used in the usual form.

The machine is even more perfectly under the control of the engineer than a steam engine can be, and it is perfectly self-regulating, so that no matter what duty is thrown off, the speed is instantaneously adjusted to the duty required. The principle of its construction is, to all appearances, as capable of being extended so as to give an indefinite amount of power, as the steam engine. If the inventor is correct in his calculations, the cost to the horse-power, of running such an engine, is very much smaller than the cost of fuel for a steam engine; while the attendance and manipulation is still more favorably disproportioned. The cost of the machinery must also be much less, and the space required for the same is largely economized.

The advantages to be derived from the introduction of some such power, as a substitute for steam, even at an expense of the same amount of cost and space, must be obvious to every one; but if that same power can be obtained at a much less cost, and confined in much less space than steam, the advantages would be absolutely incalculable. We have had no opportunity to give the invention such an examination as will enable us to express anything like a definite opinion of its merits, founded upon our own judgment. We have examined electro-magnetic machines heretofore; but never, until our attention was called to the present one, have we seen anything, where the first impressions were at all favorable to success.

The inventor proposes to take his model to the East, in a short time, and introduce it to the notice of capitalists. It is well worth the examination of intelligent mechanics; and we presume will be willingly shown to such, although no public exhibition of it will be made at present, if at all, in San Francisco. We believe the inventor is desirous to secure the assistance of capital to enable him to give it a practical trial; and as the invention is Californian in its conception, we should like to see it fully developed by California capital. It is now in a condition where its value may easily be determined by figures, founded upon a few simple experiments with the working model already constructed. We expect to give a full description of this invention with illustrations in a future number.

House Raising.—Probably the largest job of building raising ever effected was recently accomplished by Hollingsworth & Coughlin, in elevating the Robbin's iron block in Chicago, to the new street grade. The block is heavily constructed of iron and masonry, 150 by 80 feet on the ground, and five stories high, with an estimated weight of 27,000 tons. It was raised nearly three feet, with all its merchandise, and the side-walk, undisturbed, except in elevation. Not a crack in wall or walk was discovered, although it was raised with jackscrews, a means much inferior to the hydraulic machinery employed for such purposes in this city. Not less than 1,580 jackscrews were employed, and the work was completed in twenty-one days. The success of these gentlemen in this effort has already brought them offers to make a trip to Paris, France, for the moving of some heavy blocks of buildings there, which European mechanics frankly confess to be beyond their power. It has often been said that American mechanics only wish to know what is to be done, and they will find a means for doing it, but a stronger exemplification of this has seldom, if ever, been offered than in this instance.

Carriage Manufacture.—In 1860 there were forty carriage-making establishments at New Haven, Connecticut, employing 1,300 hands, and making 9,425 carriages, valued at $1,448,750. There are now thirty-five establishments in operation, employing 100 hands, and making 5,115 carriages, valued at $1,314,750. The carriages now made are larger and more expensive than formerly, as the main business in 1860 was in making light and cheap carriages for the Southern market. The average value of those made in 1860, was $103, and the average value of those made this year is $242. The Southern carriage trade has revived since the war, and some of the manufacturers are devoting themselves almost entirely to filling Southern orders.

Improvement in Brick Making.—Mr. John McMurtry, of Louisville, Ky., has recently put into operation an improved brick making machine, for which he has taken out a patent, and which is described as follows:

The clay is taken from the ground by means of elevating cups attached to india rubber belts, and is emptied into two large wooden tanks at the top of the machine, where it is ground and tempered by steam, which is let in through small apertures in the cylinder. It then passes into the molds on the large cylinder, where, after receiving a pressure estimated at eight tons, the bricks drop upon an india rubber belt, and are carried away to dry and be burnt. The large cylinders make twenty-five revolutions a minute, and at each one discharge eight bricks, or twenty per minute. The capacity of the machine, it will be seen, is 12,000 per day of ten hour's work. The bricks, on leaving the mold, require very little drying, from the fact that the immense pressure put upon them drives almost the entire moisture out.

The machine is highly spoken of by competent judges, and the company owning it are giving a practical demonstration of its value to large numbers of persons who daily visit the premises to witness its operations.

Mr. Wm. N. Shaw, a mechanic in the employ of the Union Company at Copperopolis, has recently invented a new grapple for safety cages, to prevent their falling in case the rope or chain breaks. It is said that the invention is very simple and effective, and can readily be attached to any cage. Mr. Shaw is about to apply for a patent.

Saw mills were first used in Germany in the 14th or 15th century; and in 1663 one was erected in London, by the side of the river Thames.

THE STEAM SYPHON PUMP.

This is the name given to a new pump recently invented in New York, and for the manufacture and sale of which a company has been formed in that city. This pump is a device for raising and forcing water by the direct action of steam, and is operated by simply attaching a globular-shaped chamber to a steam pipe, at any convenient point in its length, and connecting that chamber, at any convenient angle, with the water to be removed. The jet of steam, passing in a direct line through the chamber, creates a vacuum in the chamber into which the water rushes, and from which it is forced by the current of steam, much after the manner in which the feed water is forced into the boiler by Gifford's injector. The invention is extremely simple; not at all likely to get out of order, and may be readily put up at any place where communication can be had with a steam boiler. The cost of an apparatus to throw from 100 to 3,600 gallons per hour, is only from $20 to $200.

This pump is so constructed that there are no moveable parts to it; it is without valve or plunger, and so arranged that all bodies of less diameter than the suction pipe, such as fruit, grain, sand, mud, cinders, coal, brick-bats, etc., etc., pass freely through it without in the least impairing its operations. These qualities would appear to give it immense advantages over any other machine as a bilge-pump for steam vessels. For employment on board of steam vessels, where an abundance of steam is always at hand, it must be especially serviceable. In case of leakage, the whole power of the steam can be employed, if there are pumps enough on board, to free the vessel of water. Its employment for such purposes is strongly recommended by numerous officers and persons connected with the government and mercbant marine.

Captain M. Hiller, of this city, has been appointed agent for the company for the Pacific coast, and a consignment of these pumps is expected by the next steamer. They will be received and may be examined at the Union Foundry.

Henry Steens is building at his yard in Greenpoint, L. I., a large wooden steamer for the Pacific Mail Steamship Company. This vessel is said to be the largest wooden steamer ever built. She is 5,000 tons burthen, 300 feet in length, 50 feet in breadth, with 31 feet 6 inches depth of hold. She is to be constructed from the best material, and will cost over $1,500,000.

American Pianos in Europe.—The New York *Tribune* says that the house of Steinway & Sons, of New York, turned out over 203 pianos during the month of November last, of which number twenty-eight were first-class full concert grands—*eight of which went to Europe.*

Hint to Railroad Men.—A St. Louis paper gives a description of a new invention said to be now in use on the street railroads of that city, and called a "conscience meter." It records each passenger who pays the conductor his fare, and registers the amount received. The instrument is buckled around the waist of the conductor, and the face, which resembles the dial-plate of a gas meter, with three hands, is locked up, to prevent the conductor from turning it back.

The Advantages of Low Carts.—To illustrate the saving of labor by the use of low carts, the *Agricultural Gazette* says that a man in spading will turn over about one hundred tons of earth per day. If he had to throw it over the side of a cart or wagon five or six feet high, he could not handle more than one-fifth of the weight he lifted in the first place. Consequently, for every foot the cart is lowered a fifth part of the labor will be saved.

Ingenious.—The latest product of Yankee ingenuity is the self-ringing mop. By the use of it house-cleaning becomes a fine art. It is neat, durable, labor-saving, and there is no longer need of scalding the hands in water or getting on the knees to do the scrubbing out.

Agricultural Invention.—Mr. Hill, of the firm of Hill & Bradley, Marysville, has invented a grain-sower, which for its simplicity, cheapness and serviceableness, promises to come into general use among the farmers of California.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the proper Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensue. If the application is rejected we cause thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, either poor or rich, an equal chance of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficient, however, for to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, and the fee for preparing the same will then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3½ yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Mr. Wm. R. Bradshaw, is our Special Correspondent and Traveling Agent. All favors or assistance rendered him in his progress through the country in behalf of our journal, will be duly acknowledged.

SAN FRANCISCO, Jan 1st, 1866.

Mr. A. C. Knox, is our fully authorized Traveling Agent, and all subscriptions, or other favors extended to him, will be duly acknowledged at this office.

SAN FRANCISCO, Jan 11th, 1866.

San Francisco:

Saturday Morning, Feb. 3, 1866.

MINING INTELLIGENCE EXCHANGE.

The proprietors of the MINING AND SCIENTIFIC PRESS have long had in contemplation the establishment of a "Mining and Mechanical Exchange Room," which shall be *free*, at least to all persons visiting the city, if not to actual residents. The precise plan and scope has not yet been fully matured; but we have been collecting facts and information, with such an object in view, for the last three years, which will soon be arranged in a convenient form for reference, and which will present the fullest and most perfect record and history of California mining, which it will be possible to obtain. The entire record will comprise a number of large volumes of printed matter and manuscript—the one-tenth part of which is not within the reach of any other parties than the proprietors aforesaid. We shall soon be able to give our friends and the public the benefit of the same.

THE REESE RIVER MILLS AND MINES.—The *Reveille* is after our correspondent "J. L. Ormton," with a sharp stick; so also is a correspondent, who writes us from that region under his proper signature; but whose communication came to hand too late for insertion in our present issue. It will appear next week. "Ormton," in his communication, stated among other things, that there were more stamps at work or nearly ready for work in and about Austin, than could possibly find employment—their number was over 250, while it would be impossible "at any time during the next twelve months to keep more than sixty stamps in full work, from the mines of the Reese River district." The *Reveille* questions the general terms of the statement, and adds that our correspondent has set the number of stamps at least 100, in number too high. A probably correct and very favorable tabular exhibit of the yield of the Reese River mines will be found elsewhere in our issue of to-day, to which we would refer our readers for information in this respect. We can assure the *Reveille* that "J. L. Ormton" is no myth, although the signature is an assumed one.

THE FLOOD ON THE SACRAMENTO.—The Sacramento river stood twenty-two feet eight inches above low-water mark, on Friday of last week. It maintained its hight, with but little variation, throughout the day. This is but *six inches lower* than the flood-mark of January 10th, 1862

THE PROPOSED MINING COLLEGE.

The establishment of a school or college for the purpose of teaching the sciences bearing upon mining, agriculture and the mechanic arts, is a step which, if well directed at the outset, and placed upon a liberal basis, cannot fail to produce most beneficial results. Much will be lost, or rather will fall short of attainment, if unwise counsels prevail.

The proposition to open a school of technical instruction for miners, is naturally viewed with some degree of jealousy by those who have added a little practical education to a mere empirical knowledge of the theory of mining; and by those who, after long years of toil and experience, have acquired a degree of knowledge which enables them to manage with considerable success, in some particular locality, or in a peculiar class of mineral, with which they have been long familiar. The first, fear an exposure of their ignorance; while the latter are jealous of the proposed introduction of a class of men into their midst who have been raised to the same point as themselves, by a sort of royal road, which they have never been permitted to travel. Such objections, of course, are not worthy of consideration.

There is still another class who honestly fear lest the practical character of the miner would be injured by placing too much dependence upon theory alone. Such fears are groundless, as it is not expected to substitute the instruction proposed for the experience to be gained only by patient and persevering labor. Even a superficial mining education is not without its benefits; for, let any good, practical miner only acquire a fair amount of general knowledge in the science of mining, in addition to his peculiar skill, and he will be from that time on freed from the vexatious interference of shallow pretenders and charlatans, who, possessing neither practical knowledge nor scientific acquirements, go about the country, with a swagger and pretentious confidence of knowledge, seeking to impose their humbuggery upon uneducated mine-owners.

One great need of something more than mere practical experience for success in mining, grows out of the varied circumstances under which mineral deposits occur in different districts, and the constantly changing geological features by which they are surrounded; to a proper knowledge of which technical instruction in schools is an absolute necessity. One of the chief objects of the institution proposed, is to fit the miner by a general examination and study, both theoretically and by observation in the field and mine, of all these various phenomena, and the different processes used in various localities, to suit his machinery, and his processes, and his general mode of work, to any particular locality in which he may be engaged, and to any condition under which he may find the mineral placed, which he may be called upon to treat. Without the education proposed, he may be constantly subjected to the imposition of charlatanism, or he may be led into pecuniary ruin by the one-sided knowledge or local prejudices which he has impercceptibly acquired by his isolated, practical education.

Every person intimately acquainted with early mining in Washoe, knows that millions of dollars were sacrificed there by the ignorance of those in charge. Men were sent to take charge of mines there, who were never under ground in all their lives, unless on a visit to a wine cellar!—while mill-men and amalgamators were put in charge of works who were ignorant of the very first principles of both mechanics and metallurgy. And who does not know that such men generally pretend to three-fold the knowledge of those who are experienced and educated; overwhelming and disgusting with a weight of words and assertions, those more modest and unassuming men who thoroughly understand their business.

Innumerable instances might be mentioned, both in this country and elsewhere, where immense sums of money have been lost by the employment of such men.

We will, next week, endeavor to point out some of these instances, and to show where our mines and miners would be directly benefitted by the establishment of a school of the character proposed.

YIELD OF REESE RIVER ORES.

We give below, compiled from the Reese River *Reveille*, the returns of the bullion-producing mines of Lander county (Reese River district), as shown by the Assessor's books, for the third and fourth quarters of 1865; showing the amount of ore worked from each mine, and the average yield per ton. The table will be found very interesting:

	THIRD QUARTER.		FOURTH QUARTER.	
Name of Mine.	*Tons.*	*Av. Yield.*	*Tons.*	*Av. Yield.*

Yankee Blade	..	....	237	41.35
Lent & Chase	..	....	14½	101.06

The average yield per ton for the third quarter, of all the rock crushed in the district, was $182.75; that of the fourth quarter, was $117.89. Quite a discrepancy will be noticed in the yield of the ore from the same mines for the two quarters—the most marked discrepancy being in ore from the Naiad Queen No. 1, the Savage, and Whitlatch, Yankee Blade. It is reasonable, says the *Reveille*, to assume—indeed, we have been so advised in the case of one mine—that the higher figures resulted from working ore only of the first-class. It will also be observed that a number of mines yielding bullion in the third quarter are not included in the returns of the fourth quarter, and *vice versa*. Several of the mines have been sold, and a large number are under negotiation, while a still larger proportion cannot be profitably worked without the aid of machinery. The long-continued cold weather, as well as the condition of several of our mills, have greatly hindered the production of bullion during the last quarter. It is quite evident from an examination of the Assessor's returns for the last three quarters of 1865, that there are in this county over one hundred mines that could be made to produce bullion profitably, after the expenditure of a moderate sum to furnish them with the necessary machinery. Too many of them are owned by poor men, who have neither capital, system, nor harmony. In this county, at the present time, we doubt if the most systematically-worked mine of the best-managed mill extracts and reduces its bullion at a cost of less than $40 per ton, while in the greater number of cases we believe it will reach $50.

THE RESTLESS MINER.—The Humboldt *Register* says: "It is strange how the passion for finding new diggings will fasten on a man who once allows himself to sit in front of a frying-pan and bundle of blankets, on the ridge-pole of a sore-backed horse. With plenty of excellent ledges already exposed at their doors, these prospectors keep up their pursuit as if it were a mania; as with many it seems really to be.

IT is stated that an English company have undertaken to build the railroad from Shingle Springs to Carson City and Virginia.

OUR GRAVEL DIGGINGS.

Mills for crushing cement gravel are now being built all through the central portions of the mining regions, from the banks of the Yuba through Nevada, Placer and El Dorado counties, down into Calaveras. In our to-day's mining summary notices will be found of the successful working of these mills in the upper portion of Placer county, and of the recent startiag of one by Messrs. Kaapp, Wilcox & Co., at Yaqui Camp, near San Andreas, in Calaveras county. The fears formerly entertained by many that our placer diggings were soon to be exhausted, are rapidly being dispelled. The fact is we are just beginning to open them up. The present system of rivers contains but a small portion of the auriferous gravel of California; and it is only the gravel along the immediate beds and banks of those streams, and the more shallow hill diggings, which occur at intervals, between them, which our mines have yet attached to any considerable extent. The immense placers formed by the ancient system of rivers which are now known to have been even more extensive than those at present existing; together with the extensive and irregular deposits of gravel, due, in all probability, to still more ancient glacial action, are as yet scarcely entered upon by our placer mining operations.

Capital and machinery, scarcely less in extent to that required for the working of our quartz mines, will be needed to develop these ancient placers. Mills must be erected and extensive drain tunnels driven, and in some cases pumps and hoisting works erected to get at these rich deposits. A large number of mills, known as "cement mills," are already engaged in taking out the gold from this cement gravel. They will eventually be scarcely, if at all inferior either in numbers or importance, to our quartz mills. The attention of capital is already being turned in that direction, and millions of dollars will soon be absorbed by this promising branch of our mining industry. We hope soon to be able to lay before our readers some important facts with regard to these cement diggings, which will, probably surprise our own people, and which cannot fail to exert an important influence abroad in opening the minds of capitalists to the future importance and magnitude of our placer interests which, instead of being on the wane, are in reality but just beginning to be developed.

AN IMPORTANT MINING ENTERPRISE.

The Grass Valley *Union* says that a company is in process of organization for the construction of an extensive drainage tunnel, to commence at some point on Wolf Creek, below Allison Ranch, and intersect several ledges, somewhat upon the same principle as the Amazon tunnel, in Palmyra district, Nevada, and the Sutro tunnel in Virginia. The number of shares is fixed at 1,000. The par value of the shares has not been determined, but in order to prevent a monopoly of the enterprise by capitalists, it has been decided that no shareholder shall be entitled to represent more than one share. The first payment for a share shall be five dollars—with installments of one dollar each, to be levied as the work progresses. Some seventy names have already been subscribed, and the list is rapidly filling up. Miners of much experience and men of capital are interested in the work. Every miner acquainted with the line of this proposed tunnel must see at once the advantage of such a work. It will drain, to a great depth, some of the richest mines in Grass Valley, and may be extended almost indefinitely. It can scarcely fail, in its progress, to open up new and valuable mines. The idea is worthy the energy and enterprise of that important mining locality.

THE EAGLE MINE.—We yesterday saw a fine golden brick, the result of a late crushing at the Eagle mine in Amador county, and near West Point. Twenty-two and a half tons of rock were crushed, realizing $1,006.50—about $44 per ton. The gold assays $16.50 to the ounce. The Secretary's letters speak well of the appearance of the mine and rock, and the indications are that even a better result will be realized from the next "clean up."

Rich Rock from the Louisiana.—We have seen some very rich specimens from the Louisiana lode, near Coulterville, Mariposa county, which mine we noticed, at considerable length in our issue of the 20th ult. These specimens are from a newly opened locality on this mine, and more than justify the impressions of its value which we have already given. The enterprising proprietors of this mine, Judge Heslep of this city, brother and son, are determined to have it properly and thoroughly opened and worked. To this end they are spending some money in the way of experimenting. The Hagan desulpharization process, and the Ryerson amalgamating process, will both be thoroughly and practically tested. A trial furnace, for the former process, capable of roasting ten tons at a charge, has already been once fired up, and worked very satisfactorily. It is designed to subject the quartz, after passed successively through the Hagan furnace and under the stamps, to the Ryerson process, for amalgamation, in the presence of superheated steam. The result of these experiments will be looked for with much interest.

The Excelsior Mines no Myth.—The reporter of the Virginia *Enterprise*, who lately visited the Excelsior mines, was very much taken aback, a few days since, by a San Francisco gentleman who seriously approached and inquired of him if there was really any importance to be attached to the reports from those mines. The reporter aforesaid immediately took the doubting Thomas to see a large collection of selected rock from that locality, which would assay from $250 to $50,000 to the ton. The doubter being convinced that rock which could produce such magnificent specimens, must be valuable, in the aggregate, exclaimed in substance, "Why, with such rock so near, are the people of Virginia City talking so much about going to Montana?" The exclamation was a very reasonable one; but somehow or other people *will* run off to unexplored fields, and leave much richer ones close at home; there is something so fascinating about distant mines—it is perfectly irresistible to some miners, and neither facts nor logic can drive it out of them.

The New York *Times* is discussing the question of an underground railroad, for the relief of Broadway, and showing up its advantages over the common tracks in use. It is estimated that the total cost of such a road, extending from Bowling Green to Central Park, would be about $8,500,000. The estimated receipts for the first year are $1,500,000, and the running expenses $541,000—making the net earnings $958,000, or about 12 per cent. on the cost. This estimate is based on a traffic of 20,000,000 passengers, at an average of seven cents per head. The estimate of traffic is considered quite within bounds, in view of the fact that the traffic of the whole city is computed at no less than 100,000,000 per year. Underground railroads have proved a pecuniary success in London, and are now found an almost indispensable convenience. The situation of New York will render their eventual establishment in that city equally indispensable, and that at an early day.

Silver Ore from Lower California.—The Kohler Bros. Silver Mining company received, by the last trip of the John L. Stephens, from their Espinocena mine, in the San Antonio district, 1,685 bags, or 170,000 tons of second-class ore, assaying on the average $90 to the ton, of 2,000 pounds. The reports of W. V. Roberts, Esq., the intelligent superintendent of the company's mines, continue to be of the most favorable description. A former shipment of twenty-seven tons gave an average assay of $115 to the ton. But one assessment, and that of only one dollar per share has been levied, in the last fifteen months. The same trustees, who have managed the property so well for the past year, were, on the 8th instant, re-elected for another term.

A strike among the colliers of Northumberland, England, has lasted twenty-three weeks, and entailed a loss of $150,000 upon the employers alone.

LIST OF OFFICERS OF MINING COMPANIES AND INCORPORATIONS.

[PUBLISHED IN THE FIRST ISSUE OF EACH MONTH.]

[Below we give the date of recent meetings held in this city and the names of officers chosen or appointed. Every bona fide company is invited to send us the result of their election, to be thus put on record, gratuitously, with any other facts of general interest.]

Alameda Coal M. Co.—Jan. 8th. Trustees: B. Dean, B. Eug. Auger, W. B. Agard, T. P. McMahon, A. Wapler. President, B. Dean; Secretary, Theo. Reuter; Treasurer, B. Eug. Auger; Superintendent, A. T. Ladd.

Kohler Brothers Silver M. Co.—Jan. 8th. Trustees: Stephen Otis, I. S. Polack, I. W. Felt, I. Ward Eaton, Wm. Fischel, B. L. Brandt, G. J. S. Hyams, Q. A. Chase, J. Naphtaly. President, Stephen Otis; Secretary, R. Wegener; Treasurer, G. J. S. Hynms.

RECENT INCORPORATIONS.

Keystone Consolidated M. Co., located near Amador City, Amador county.—Capital stock, $600,000, divided into 600 shares, of $1,000 each. Trustees: John S. Henning, J. W. Gashwiler, M. C. Hillyer.

Pacific Coal Co., Contra Costa county.—Capital stock, $50,000, divided into 250 shares, of $200 each. Trustees: John Hahn, S. Lachman, David Stoddard, L. Yappe, C. S. Higgins.

San Ambrosia Silver M. Co., San Antonio, Lower California, Mex.—Capital stock, $600,000, 3,000 shares, $200 each. Trustees: Joseph Kohler, Jacob Kohler, R. Kohler.

Rippon G. & S. M. Co., Silver Mountain, Alpine county.—Capital stock, $300,000, 300 shares, $1,000 each. Trustees: John Cahalin, C. L. Gilbert, M. C. Owens, Curtis Palmer, Thos. Taylor.

Hope Gravel M. Co., Grass Valley, Nevada county.—Capital stock, $60,000, 3,000 shares, $20 each. Trustees: Geo. E. Hinckley, H. J. Paine, A. C. Taylor, J. A. Ramsoa, W. A. Bateman.

To Correspondents.—We have a large mass of communications on hand—all good—which we will endeavor to find place for as fast as possible. Among those not yet announced are the following: "R. K.," of Austin, Reese River; two communications from "M.," of Brown's Valley, Yuba county; two from "X.," of Partzwick, Mono county; another letter from our correspondent "D.," who writes, this time from Folsom; "****," from Aurora, Nevada; "Juanito," from San Antonio District, Nyo county, Nevada; and "A. H.," from Weston, Mammoth District, Nevada. We have also a very well written communication from "O. W. E.," upon the mining title question, with regard to which we should be pleased to see the writer.

To Metallurgists and Miners.—We would call the especial attention of metallurgists and miners to the card of "B. B.," under the head of "Metallurgists and Miners," which will be found in another column. The gentleman advertising is a person of undoubted abilities in his speciality, and one who has had much practical experience both here and in Europe. He is prepared to undertake the construction and management of metallurgical establishments for the reduction of the ores of copper, silver or lead. Undoubted California reference will be given. He is also prepared to give advice and plans, as consulting expert and engineer.

Prospecting to Some Purpose.—The Reese River *Reveille* gives the particulars of a pretty good prospecting operation, by Mr. John Sisson, of that place. In November last Mr. S. discovered and located the Fairview lodge, in the Silver Peak District. Mr. Samuel Martin, of the Vanderhilt mine, was joint owner with him. Mr. Sisson, the discoverer, has just disposed of his one-half interest for the sum of $75,000. A splendid result achieved in less than two months.

Mining Suit.—The Sonora *Democrat* says suit has been brought against the original owners of the Rawhide Ranch mine, by the San Francisco company that bought from them, and afterwards yielded possession to the New Yorkers. They charge fraud in the transaction. Several of the first company are under arrest awaiting a hearing. The full particulars of the transaction, out of which this suit has grown, were given in the issue of the 14th of October last.

Detention of the Patent Blasting Oil.

Messrs. Editors:—We beg to inform you that the reason why we are not yet in possession of the first shipment of Nobel's Patent Blasting Oil, which arrived some time ago per steamer from Hamburg at New York, is because the Mail Steamship Company, believing the same dangerous, refused to receive it on board their steamers. Certificates from the first chemists of Europe to the effect that this Blasting Oil, when packed for shipment, is in no wise dangerous, have been forwarded to New York, and we apprehend no further delays in shipping, as soon as these certificates have been received. On receipt of the first sample lot we shall cause public trials to be made. Your obedient servants,

Bandmann, Nielson & Co.,
Sole Agents for Nobel's Nitro-Glycerine.

Pah-ranagat Valley.—The Reese River *Reveille* has something further from these newly discovered mines, which we described at considerable length in our issue of the 9th of December last. The information reached that paper through a letter from E. C. Hammond, under date of December 21st, 1865. Mr. H. writes as follows: "We are only about 200 miles from Austin, but no white man has ever made the trip. Henry Butterfield will go straight to Ruby with Indians for guides. These mines exceed anything I ever saw. No mines in your section can compare with them. This spring they will be known. There is no snow here. By looking on Bancroft's latest map you will see that the Big Muddy empties into the Colorado. It has two sources—one, the east, is in Meadow Valley, and the other, the west, is in Pah-ranagat Valley." This Butterfield—who has for a long time been employed at the Indian agency as interpreter—was sent to the Pah-ranagat Valley several months since from Fort Ruby, by Lieutenant Seamands. He traveled directly from Ruby to Pah-ranagat.

Hydraulic Mining in Montana.—An order has been received in Sacramento for two pipes or nozzles to be used in hydraulic mining, to be forwarded to Montana. The person sending the order speaks very enthusiastically of the mineral richness of that country.

A Good Financial Weekly.

The Stockholder:

MONITOR OF FINANCE AND INDUSTRY,

Is published every Tuesday Morning,

At 72 William street, New York,

—GIVING—

Quotations of all important Bonds and Stock Securities in the United States; GOVERNMENT, STATE, CITY, BANK, INSURANCE, PETROLEUM, MINING, and other miscellaneous Joint-Stock Organizations, with the Financial Statements of the same; Notices of Payment of Interest and Dividends—

In fact, all matters that can be of interest to Security-holders.

Its columns will be found replete with important and useful financial information.

The Quotations given are correct, and may be relied upon either for the purchase or sale of Bonds or Stocks.

The Stockholder is the *only strictly financial paper published in the United States.*

TERMS, FIVE DOLLARS PER YEAR.

All letters should be addressed,

GEO. M. NEWTON, Publisher,
5v12tf 72 William street, New York.

NEW! NOVEL! USEFUL! INDISPENSABLE!

COPYRIGHT SECURED.

BROCKWAY'S

PERPETUAL CALENDAR

Shows without hesitation

The Date or Day of the Week

—OR—

Any Day or Date in the 19th Century,

Rendering it a prompt and accurate

ASSISTANT RECKONER,

Besides answering fully
And Conveniently
All the Purposes of the
Ordinary Counting-House Calendar
During the Nineteenth Century.

The Calendar for each month is arranged in a single column, as in the regularly published (book) Almanacs, rendering it more easy for reckoning, in most instances, than the customary Counting-House form of Calendars.

It is simply understood.
It affords the same reference from year to year.
It avoids errors.
It occupies a convenient space.
Its usefulness increases by use.
Once used it becomes indispensable,
It is worth one hundred times its cost.

Its cost is trifling, but its value is constant and perpetual. For a single reference it is often worth ten times its cost. In financial, legal and business transactions, it saves many grave and important mistakes.

DEWEY & CO., Sole Agents
For the Copyright on the Pacific Coast.

For sale only by Canvassing Agents, and at the Mining and Scientific Press Patent Agency, Book, News and Job Printing Office, 505 Clay Street, San Francisco.

Pacific Mail Steamship Co.

The following Steamships will be dispatched on the following named days.

February 10th—GOLDEN AGE.....Capt. E. L. Farnsworth. Connecting with ATLANTIC, Capt. Maury.
February 19th—GOLDEN CITY.....Capt. F. R. Baby, Connecting with NEW YORK, Capt. Horner.
February 28th—COLORADO.....Capt. Jas. T. Watkins. Connecting with HENRY CHAUNCEY, Capt. Gray.

From Folsom street Wharf

At 11 o'clock A. M., punctually to the hour,

For Panama.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York in the splendid steamships of the PACIFIC MAIL STEAMSHIP COMPANY.

Steamers of this line will be dispatched the 10th, 19th and 28th of each month. When these dates fall on Sunday, the steamer will leave on Saturday preceding.

Steamer leaving San Francisco on the 10th touches at Manzanillo. All touch at Acapulco.

Departure of 19th connects with French Trans-Atlantic Co.'s steamer for St. Nazaire, and English steamer for South America.

Departure of 10th connects with English steamer for Southampton, and steamer running to Guayaquil, touching at Tumaco, the port of the new mines, and P. R. R. Co.'s steamer for Central America.

Cabin passengers will be berthed for Atlantic steamer.

A Baggage Master will be sent through each trip.

These steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

For merchandise freight apply to Wells, Fargo & Co.

OLIVER ELDRIDGE, Agent.
Corner Sacramento and Leidesdorff sts.

A MAINE paper states that a colony of fifty families, principally from that State, is to embark for Palestine in July next. They propose to settle at Jaffa, the ancient Joppa, building lots having been purchased, and will carry out with them Yankee improvements.

TO YOSEMITE.—A petition is receiving names for a State appropriation of $25,000 toward the construction of a wagon road to Yosemite Valley. By an Act of Congress this Valley and the Mammoth Tree Grove are protected from land speculators.

A HIGH wind which prevailed in Queen's county, Ireland, a short time since, blew the thatch from the cottage of one Patrick Murphy, and revealed to him a horn filled with 4,000 guineas and several Spanish dollars.

IF we would have powerful minds, we must think; if we would have faithful hearts, we must love; if we would have vigorous muscles, we must labor; and these three—thought, love, and labor—include all that is valuable in life.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

To Mining Companies.

A GENTLEMAN OF MUCH EXPERIENCE AS A MINing Superintendent, in England, Spain, and on the Pacific coast, and one intimately acquainted with every department of mining, and with nearly every class of mineral, is desirous of securing a position as Superintendent of some mining operation in California or Nevada. The applicant was for four years Superintendent of the New Almaden Quicksilver Mine, in this State. The best of reference given on application at this office.
San Francisco, Oct. 12, 1865 5v11tf

A Business Compliment.

MESSRS. DEWEY & CO.—Gentlemen: Your note informing me that my patent for Crushing and Baling Machine is ordered to issue is at hand. Please accept my thanks for the prompt and business like manner with which the case has been conducted, and inclosed find twenty dollars for balance Government fees. Respectfully, etc.

JACOB PRICE.

Metallurgy.

MOSHEIMER'S CONCENTRATOR
RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,
23v11qy 423 Washington street.

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,
Bryant Street, Between Third and Fourth,
SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the so-called "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

12v11-1m E. H. WILSON, Secretary

Bacon knelt down before composing his great work, and prayed for light and inspiration from heaven. Pope never could compose well without first declaiming at the top of his voice, and thus rousing his nervous system to its fullest activity.

As daylight can be seen through very small holes, so little things will illustrate a person's character. Indeed, character consists in little acts, daily life being the quarry from which we build it up, and rough hew the habits that form and stamp it. That is so.

A steamer has succeeded in passing through the famous Dutch Gap Canal. The Silas O. Pierce, a vessel of forty-three feet beam, performed that feat.

Mr. I. N. Hudson, is authorized to solicit subscriptions, advertising, etc., for the Mining and Scientific Press, in San Francisco, and to receipt for the same.

QUARTZ OPERATOR'S
HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers.
Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epiteme of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractery and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belsbaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

Table of Contents of this book will be found on pa 415 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition hereto fore presented and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes above-mentioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts. } WM. LOEWY, Clerk.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by E. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Denison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes above-mentioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, } WM. LOEWY, Clerk.

By A. J. Jechers, Deputy Clerk.

Porter & Holladay, Attorneys for Petitioners. 2v12-4w

OFFICE OF THE COUNTY CLERK OF THE CITY AND County of San Francisco, State of California.—In County Court.

In the matter of the application of LA MORRONENA SILVER MINING COMPANY, for Order of Dissolution.

Notice is hereby given, pursuant to law and an order of the Hon. Samuel Cowles, County Judge of said City and County, this day made, that La Morronena Silver Mining Company, a corporation duly organized and doing business in said City and County, has made application, by petition duly filed, that said Company be dissincorporated and dissolved, and that said application will be heard by and before the Hon. Samuel Cowles, County Judge aforesaid, on the seventeenth day of February, A. D. 1866, at 10o'clock A. M., in the Court Room of said County Court, in the City Hall Building of said City and County.

Witness my hand and the Seal of said County Court, this eighteenth day of January, 1866.

{ Seal and U. S. Rev. Stamp, 50c, canceled. } WM. LOEWY, County Clerk. } By J. Naphtaly, Dep. Co. Clerk. 3v12-4w

1852. 1866
A NEW VOLUME.
Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents and contributors of distinguished ability in New York, Paris and London.

Miss BRADDON'S greatest Sensation Story, published from advance sheets:

RUPERT GOODWIN;
—OR—
THE SECRET OF WILMINDON HALL.
A NOVEL.—BY MISS M. E. BRADDON,
Author of "Lady Audley's Secret," "The Outcasts," "The Doctor's Wife," "Three Times Dead," etc.
—IN—
THE GOLDEN ERA.
NOW IS THE TIME TO SUBSCRIBE!

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin: the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

"THOUGHTS AND THINGS"
APPEAR WEEKLY IN THE GOLDEN ERA.

Read "Thoughts and Things" in the Golden Era.
"Professor Clearquill," in the Golden Era.
"Dogberry," in the Golden Era.
"Alice Mason," in the Golden Era.
"Hugh Humphrey," in the Golden Era.
"Bill Dadd," in the Golden Era.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,
Golden Era Building,
No. 648 Clay street, near Montgomery, San Francisco

Money by Mail.—Subscribers and advertisers remitting us money in less sums than $60, can do so by mail at our risk, if they will register their letters; we will take no risk on unregistered letters, or letters by express. Remittances by express must be prepaid.

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

OUR NEW YORK AGENCY.

Mr. Geo. M. Newton is our authorized agent in New York City, and will receive advertisements and subscriptions for the Mining and Scientific Press at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "Stockholder," No. 72 William street.

Constitution and By-Laws

Office, 402 Front street, San Fraoclsco, Cal. jon20

MINING LAWS AND FORMS.

Third Edition revisod and enlorged.

Compiled by H. B. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

Published by H. H. BANCROFT & CO.

VOLUME TWELFTH.—The MINING AND SCIENTIFIC PRESS, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons" its gait hos been rapid toward a perfect journal. Its appearanco evidences its prosperity, but doubtless, like some of the rest of us, it con stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by dally newspapers, ond the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising thon any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

Kentucky Copper Mining Company—Location: Mino. Felix District, north of Copperopolis, Calaveras County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment No. 7, levied on the 20th day of December, 1865, the several amounts set opposite the nomes of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Darye, R	47	10	$10 06
Gallagher, Th	188	75	75 00
Lachmann, S	235	25	25 00
Lachmann, S	247	25	25 00
McCarter & Oxtoby	116	25	25 06
Schuhmacher, R	271	10	10 00
Stehle, E	207	10	10 06

Aod in accordooce with law, and on order of the Board of Trustees, made on the 20th day of December, 1865, so mouy shares of each parcel of said stock as may be necessary, will be sold at public auction, by Messrs. Cobb & Shiloo, at No. 408 Montgomery street, San Francisco, Cal., on Wednesday, the 7th day of February, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. A. BADER, Secretary.

Office, 644 Washington street, San Francisco, Cal. jan20

Oxford Beta Tunnel and Mining Company, Esmeralda District and County, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 8th day of January, 1866, an assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable on the 9th day of January, 1866, in United States gold and silver coin, to the Secretary, or to the Superintendent at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of February, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 3d day of March, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

M. of said day, to pay said delinquent assessment thereoo, together with costs of advertising ond expenses of sale.

S. O. PUTNAM, Secretary.

Office, 402 Front street, San Francisco. jon20

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discropancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

SUBSCRIBE FOR IT.—The large, illustrated sixty-four column weekly newspaper—the San Francisco MINING AND SCIENTIFIC PRESS—should be taken by every minor, prospector, and intelligent citizen throughout Colorado, as it gives a mint of most useful information to be gained no other way, on mining matters generally.—[Rocky Mountain News.

THE FUTURE OF SALT LAKE.—The Atchison *Press* says: "In a letter from Salt Lake City the writer predicts that when polygamy becomes extinct, the mines developed, and the great railroad built, it will be the chief commercial city of the mountains, equal to St. Louis or Chicago, and one of the most beautiful and attractive cities on the continent."

THE LAST OF THE HEROES.—There are but two of the Revolutionary soldiers living; of these one lives in Maine the other in New York. On the decease of these, which must take place at an early day, it is proposed that some action be taken by the Government duly commemorating the event.

THE Sierra *Advocate* says that Mr. Dorrell of Downieville, has a rattlesnake which he has kept in a bottle for the last thirteen years, without food. It has grown finely all the time.

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales of mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is more favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or wife of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

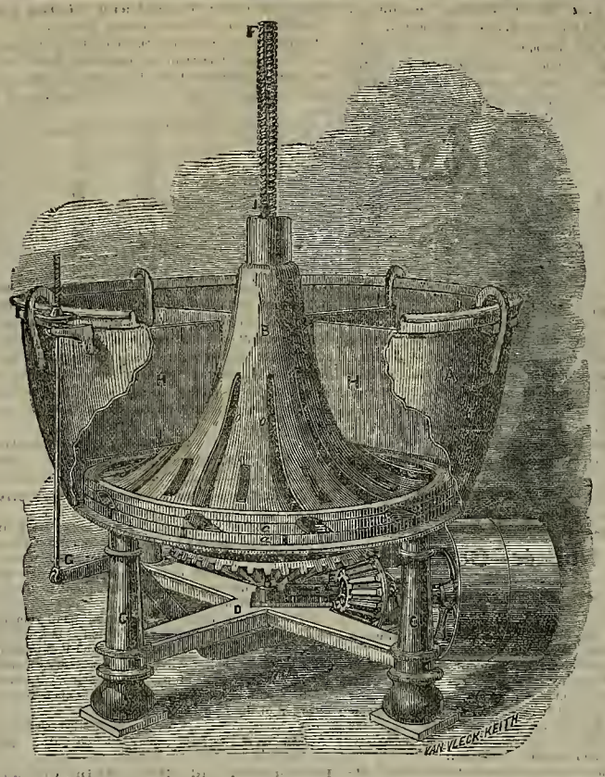
I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been furnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,
WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

OIL WELL BORING.
J. SEVENOAKS,
Contractor
For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Pennsylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Box 1229 San Francisco. 2v11

MINING PROPERTIES.

PARTIES WISHING MINING PROPERTIES CAN BE accommodated by applying to the Pacific Mineral Co., 434 California Street, next door east of the Pacific Insurance office, up stairs. W. F. BRYANT, Agent.

N. B.—Parties forwarding Mining interests for disposal, are reminded that it is important to state such facts only as can be fully substantiated, upon a careful examination of said properties, thereby greatly enhancing the chances of success, and avoiding the useless loss of time and trouble. 1v12

ENGRAVED TO ORDER.—PERSONS who desire to illustrate their individual establishments or business, should give us their orders for Engraving and Printing, and we will guarantee good work and reasonable prices.

DEWEY & CO.,
Patent Agents, Publishers and Job Printers, 505 Clay st.

WHAT IS A STATE?—Kent, the great American commentator on law, says that "In public law, a State is a complete or self-sufficient body of persons, united together in one community for defense of their rights, and to do right to foreigners." Our Federal Union is such a State as this.

BIERSTADT, the artist, has made $120,000 with his brush in three years. He is now building a princely mansion at Irvington, on the Hudson, and drives the most stylish team in the Central Park.

GEN. BUTLER'S celebrated tower near Bermuda Hundreds, from which, for so many months, lynx-eyed sentinels pried into the movements of the rebel troops, was the other day sold at public auction for the sum of five dollars. There were at least thirty cords of good timber in the structure.

A FEW days ago a grizzly bear was killed in the foot-hills above Stockton. He weighed five hundred pounds, and the Stocktonians proceeded immediately to eat him.

PHILADELPHIA AGENCY,

Parties wishing to subscribe or advertise in the MINING AND SCIENTIFIC PRESS can be accommodated by calling upon our Agent, Mr. TURNER HAMILTON, at the Assembly Building, 106 South Tenth street, Philadelphia, Pa., where samp copies of our publications can always be found.

BY MAIL.—The MINING AND SCIENTIFIC PRESS will be sent by mail to any part of the civilized world. In case of removal, subscribers have only to inform us of the post-office address of their old and new location, and the paper will be sent accordingly.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1854, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5

SEND US WORD.—If any subscriber to this journal fails to receive the same regularly and promptly, they will confer a favor by informing us at once.

ANNUAL REPORT
—OF THE—
Pacific Insurance Company.

IN COMPLIANCE WITH THE ACT OF THE LEGISLATURE of the State of California, entitled "An Act concerning Corporations," passed April 22, 1850, the Pacific Insurance Company of San Francisco makes the following Annual Report:

I.—The amount of the Capital Stock of this Company is SEVEN HUNDRED AND FIFTY THOUSAND DOLLARS, and paid in GOLD.....$750,000

II.—The amount of the Assets is ONE MILLION AND FIFTY-ONE THOUSAND, FOUR HUNDRED AND TWENTY DOLLARS AND THIRTY-SEVEN CENTS..$1,051,420.37

III.—The Company has NO DEBTS.

IV.—The amount of insurance effected during the year, and which remained in force December 31, 1865:

Fire	$12,973,949
Marine	484,408

This Company commenced underwriting Marine Risks, August, 1865.

V.—This Company insures against the following risks, viz.: BUILDINGS, HOUSEHOLD FURNITURE, MERCHANDISE, RENTS, LEASEHOLDS, VESSELS IN PORT AND THEIR CARGOES, and other PERSONAL PROPERTY, AGAINST LOSS OR DAMAGE BY FIRE.

Also, on CARGOES, TREASURE, COMMISSIONS, PROFITS, and WAR RISKS, and ON ALL MARINE AND INLAND NAVIGATION RISKS, TO AND FROM ALL PORTS IN THE WORLD.

VI.—This Company will take on any FIRST-CLASS RISK not to exceed $75,000 (the limit fixed by law), and on all large risks will reinsure to an extent consistent with PRUDENCE in other RESPONSIBLE COMPANIES.

10-INCH CYLINDER, FOUR-FOOT STROKE, IN PERFECT Order. Can be seen running at the San Francisco Pioneer Woolen Factory, Black Point. Inquire at VULCAN IRON WORKS, 137 and 139 First street, or to

HEYNEMANN & CO.,
26v11tf 311 and 313 California street.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates: no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

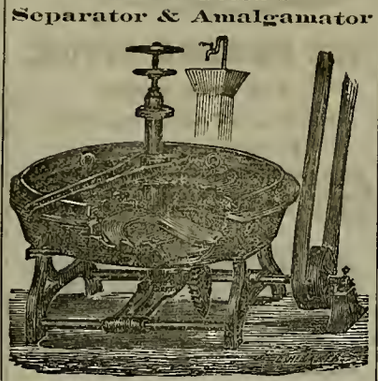
5th. There is no clogging or stopping to clean out the sulphurets and sand: consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine (it is not run empty), all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed All orders and any information required, address,

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separater and Amalgamator among all the competiters. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separaters, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of
Quartz or Ores
To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
AND
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.

Address, BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separater for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

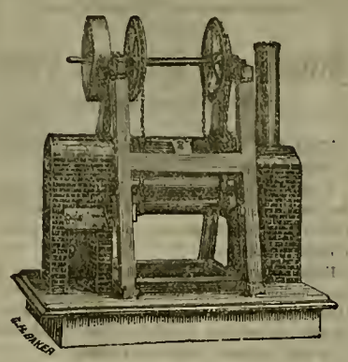
The Mechanics' Institute
AWARDED A
PREMIUM SILVER MEDAL
TO BRUCKNER'S
MECHANICAL ROASTING FURNACE.



Parties wishing to erect such Furnaces, are requested to leave their orders with

T. KALLENBERG,
12v11 416 Market street, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,
No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

Portable Steam Engines!

"Hoadley's" and "Hittinger's" Make,

COMBINING THE MAXIMUM OF EFFICIENCY, Durability, and Economy, with the Minimum of weight and Price.

These Engines are favorably known, a large number being in use on this coast for hoisting, pumping, threshing, milling and mining purposes.

Steam can be got up on these Engines in fifteen minutes after reaching the place of operation, and the time, expense of setting boilers, machinery, and "construction account" saved, (which is often the difference between the successful and unsuccessful prosecution of milling enterprises,) in fact, the portable principle is the pioneer's friend, and enables him to draw engines on their own wheels to his cabin door, and plant on the outermost confines of civilization the saw and grist mill, and it has done and will do more to help subdue the continent than any other of the modern motors which are crowding society and normalizing the world.

All sizes on hand from 3 to 30 horse power, with and without carriages.

Also, Portable Saw and Grist Mill's.

For sale by TREADWELL & CO.,
3v12-3m Corner of Front and Market streets.

Stevens' Pressure Packing.

Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which new have this packing in use—some of which have been running from three to twelve months without being opened, or shewing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df ANDREW STEVENS.

SALMON'S
PROPELLOR AMALGAMATOR
—AND—
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

9v11 J. & W. C. SALMON.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED

IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Sellers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and sellers for themselves, at the PACIFIC FOUNDRY,
1v1 San Francisco.

Important to Miners.

NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day,

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, by being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

Prater's Patent Concentrator

(Known as HUNGERFORD & PRATER'S Concentrator,)

MANUFACTURED AT THE

San Francisco Foundry and Steam Engine Works.

Corner Fremont and Mission Streets.

All orders promptly attended to.

2v12 DEVOE, DINSMORE & CO.

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

MITCHELL'S
COMBINED
FAUCET AND MEASURE.

This is one of the most useful inventions of the day, and is destined to go into universal use on this coast, as it has in the Eastern States.

The invention consists of a combined Faucet and Measure, so arranged that the liquid contents of any cask or other vessel can be drawn and accurately measured without the use of measures or funnels other than such as are embraced in the Faucet itself. While it obviates altogether the use of measures, it operates much more perfectly than the old method of drawing and measuring such liquids as have a tendency to foam up when drawn, as coal oil, linseed oil, etc.

The Proprietor has made arrangements with GALLAGHER, WEED & WHITE, of the California Brass Foundry of this city, for the manufacture of this Faucet, and is prepared to furnish the article or sell territories. Here is a chance for men with small capital to invest in a good business.

Residence, 320 Taylor street, near O'Farrell street.

D. C. MITCHELL, Prop'r.
San Francisco, Aug. 22d, 1865. 10v11-3m

[Prospectus.]

VOLUME TWELFTH.

With our issue of January, 6th, 1866, we commenced the twelfth semi-annual volume of the MINING AND SCIENTIFIC PRESS. We have abundant evidence that no class journal has ever been established which, in so short a time, has become so highly appreciated by those for whom its publication has been especially designed, or by the thinking and intelligent portion of the community generally. We may be pardoned for referring, with some degree of pride, to what the present proprietors have done, in the short space of two years, in building up this paper; and we confidently point to the past as an earnest of what our future shall be.

We shall continue, as heretofore, to spare no labor or expense to keep up and add to the well-earned reputation which the paper now enjoys, and shall exert our utmost endeavor and means to render it still more useful and acceptable to the miner, the mechanic, and the general reader. We make no apology and feel no delicacy in asking and urging upon the friends of the paper, everywhere, to aid us in extending its circulation, or in calling upon them to assist us in filling our columns with facts and information which shall be of value to our readers in the several departments of practical knowledge to which the paper is devoted. We return sincere thanks for past favors, and earnestly solicit a continuance of similar ones in future.

The rapid strides which are now being made in scientific mining on this coast, and the constant modification of old processes, which experience teaches us is a necessity for their economical adaptation to the anomalous condition of the mines and mining interests here, to say nothing of the new discoveries and improvements which the ingenuity and experience of man is constantly seeking to apply to mining operations, renders the existence of a journal, exclusively devoted to such specialities, an indispensable requisite to every miner and millman who desires to keep himself posted in the progress of the chemistry, metallurgy, and mechanics of mining. The wonderful discoveries and marvelous deeds which are now almost daily being achieved in the domain of science and art, render serial scientific and class publications the mainstay and dependence of every person who would keep up with the times. The achievements of the past few years in this direction are absolutely astounding; and who knows—who can imagine what a year may accomplish? Books are useful only as a record of the past—the living, active present can be found only in the pages of the newspaper and magazine.

With these facts and suggestions before us, may we not look with confidence to the active assistance of our friends? It will readily be acknowledged that the greater the income, the greater will be our facilities for collecting and disseminating information which shall be useful to our readers. We have no especial desire to make the MINING AND SCIENTIFIC PRESS a money-making institution; but we *do* own up to a desire to establish a really reputable and creditable journal in San Francisco, devoted to the mining interests of the Pacific coast, which shall be a living, lasting monument to our labors, a credit to California, and a valuable medium for the dissemination of useful information. To accomplish this, we are willing to work and to wait—we are willing to put into the enterprise every dollar, over and above actual expenses, which the liberality of friends may place at our disposal.

Hence we trust that the friends of the paper will take hold of the matter in earnest, and swell our already large list to double its present proportions. We can assure them, if they will do so, we shall more than double the value of the paper, without any increase in its price.

A BILL has been introduced into Congress, making it a penal offence to buy or sell any of the bonds or script of the late so-called Confederate States of America, for purposes of trade or speculation.

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

Published Every Saturday.

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Men of the Pacific Coast, which cannot be derived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now brighter than at any former period. Our facilities for furnishing a valuable paper are constantly increasing.

Following are some of the many opinions generously expressed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Nevada.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

HENDY'S
IMPROVED BLOW-PIPE.
This Convenient Helpmeet
—TO THE—
ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

EXCELSIOR MINES.

THE CROSBY & THOMPSON DESULPHURIZING PROCESS.

Accounts of an extremely favorable nature continue to reach us from the mines of Summit City and vicinity (formerly known as Meadow Lake). A gentleman has furnished us, the past week, with the following facts, with regard to the Enterprise mine and mill. The ledge was located in July last, in Excelsior district, about three miles from the Dutch Flat road, and six miles from Summit City. The Enterprise mill, built by Goss & Lombard, of Sacramento, is expected to go into operation about the middle of February. The Crosby & Thompson desulphurizing process, which has been introduced with such success at the Pike's Peak mines, will be employed in connection with this mill. The works for the same are being put up under the superintendence of Mr. King. We shall watch the results of this new process with much interest; and shall embrace the earliest opportunity to lay the same before our readers.

Mr. James Battershy, Secretary of the Enterprise company, has shown us several very fine samples of ore from this mine. One of these specimens, heavy with sulphurets, and said to contain nickel and eobalt, with no gold visible, assays $800 per ton in gold, and very little silver. Another is thickly interspersed with free gold. These samples were taken from the first shaft, and from a depth of twenty-four feet. The ledge is uncovered on the surface, showing thirty-four feet of vein rock, while the walls are found indicating that the ledge is seventy-five feet in width. At a depth of twenty-five feet a drift has been commenced across the vein, which has been driven forty-five feet, revealing the same character of rock as that found near the surface.

A second shaft has been sunk to a depth of forty feet, from which Mr. B. showed us a specimen profusely covered with free gold. Ten tons crushed at Virginia City, in August last, returned $150 per ton in gold; five tons since crushed in Nevada City gave $250 to the ton. Five and a half tons were crushed at Howland's mill in this city, last October, which assayed $411.50, and upon which an advance of $245 was made for shipment to Europe. The ore worked at Nevada City produced some three tons of sulphuret tailings, which are found to contain by assay $80 per ton.

Enterprise City has a fine location, with plenty of wood and water, and it is in the direct line of travel between Summit City and Pauly's Station. Some 300 locations have already been made in this vicinity. The Pacific Railroad will soon be completed to a point opposite the city, and a railroad station will be located within five miles of the place.

Memorial of the Miners of California.

To the President and Congress of the United States, the Secretary of the Interior and the Commissioner of the Land Office:

On the 17th day of January, 1866, a general Convention of miners of California was held at the city of Sacramento. After full consideration the following resolutions were passed with great unanimity:

WHEREAS, Since the discovery of gold mines in California, it has been the policy of the General Government to allow all those who desired to mine for the precious metals in this State a free and unrestricted right to search for and discover the same, and when found, to hold and develop their several claims, subject only to such restrictions and rules as might be adopted by Conventions held by those who were engaged in actual mining enterprises in the several mining districts of the State; and, whereas, we believe that by the adoption of that policy the mining interests of the State have been developed more thoroughly and to a much greater extent than they would have been under any other policy that could have been adopted; and whereas, legislation for the survey and sale of mineral lands is threatened in the Congress of the United States, and it is seriously proposed to destroy the property interests which have been created in this State, under the license of the General Government, for seventeen years past, and to revolutionize the whole system of mining business and tenures under which the mines have been so far developed, the State has prospered, the Government has been supplied with the sinews of war, trade with advantageous markets, and the revenue a valuable and increasing resource; therefore, be it

RESOLVED, by the miners of California, in General Convention assembled, That we are opposed to any survey, lease or sale of the mineral lands of this State, as injurious to the best interests of the General Government, and of this State, and utterly ruinous to the mining communities.

RESOLVED, That any increase of the tax upon the proceeds of the mines would be onerous and injurious to the mining interests of this coast.

RESOLVED, That the bill introduced into the Senate of the United States by Hon. John Sherman, of Ohio, is singularly calculated to work the utmost confusion and loss to the present holders of mining property, who have invested their labor and capital in developing the mines; to destroy the vast canal interests of the State, the existence of which is necessary to the prosecution of mining, and to expel the great bulk of the population of the mining districts from their homes, their business and possessions.

RESOLVED, That the miners of California respectfully petition the Congress of the United States to respect the rights and property interests which the policy of the Government, long continued, has created and fostered.

RESOLVED, That we indorse the action of the Legislature of this State requesting the delay in the issuance of patents to the Central Pacific Railroad Company, or any other railroad company, until the Government has employed effective measures to segregate the mineral from the agricultural lands lying within the lines of the grant to the railroad company, and, while willing and anxious to aid and encourage in the construction of said road—the great national highway—we most emphatically protest against the cession of a vast section of mineral and timber lands for that purpose, involving the sacrifice and destruction of private rights already vested.

RESOLVED, That a Committee of five be appointed by the President of this Convention, the said President to act as Chairman thereof, to prepare a memorial to Congress embodying the sentiment contained in these resolutions, and to cause the same to be presented, through our delegation in Congress, to the President of the United States, the Secretary of the Interior, and Commissioner of the General Land Office.

In accordance with the sixth resolution, the undereigned Committee present more in detail than is proper in the form of resolutions, the reasons which influenced the action of the Convention:

EFFECTS OF THE DISCOVERY OF GOLD IN CALIFORNIA.

The first important discovery of gold in the territory now embraced within the State of California was made in February, 1848. Immediately thereafter an unparalleled emigration by sea and land commenced and continued until the territory became numerously populated. A State Government was speedily organized. The principal lure to these shores was the gold found in the beds of the streams and deep in the hills in the track of old water courses. After a few years quartz veins, productive of gold, were discovered, and the important interest known as quartz mining grew up. Within the mineral regions thriving cities were founded, and many villages; while the agricultural portions of the State found markets for their products, commercial interests grew to great importance, and San Francisco, the principal port of the State, became great and opulent. By the laws of trade, the States on the Atlantic side of the continent soon felt the impulse which a large and varied market suddenly opened to their manufactures, and the whole nation shared in the harvest which was first reaped by the adventurous population which created this State.

POLICY OF THE GOVERNMENT.

The Government, the owner of the mines, for eighteen years acquiesced in the occupation and development of the mines, by allowing hundreds of millions of dollars in labor and capital of its citizens to be expended in opening the mines and introducing costly machinery. But it went further, and by the character of its legislation seemed to license this order of things. In view of the fact that the miners were occupying the mineral lands, it exempted these lands from survey and sale; it collected a yearly license for mining on them; it levied a royalty on the gross proceeds of the mines; it also taxed their net proceeds as income; and at a very recent period made the customs, rules, and regulations of matters by which they determine the location and possession of claims, which had long been recognized in the State Courts, the rule of decision in the United States Courts, by enacting that each case should be adjudged by the rule of possession. Under this policy of the Government the miner has never considered himself a trespasser on the public domain, and has never been treated as such; but while gratefully appreciating the generosity of the Government, has availed himself of it to acquire possessory rights to limited quantities of mining land, called claims, erected his home near at hand, toiled for years to reap wealth therefrom, and contributed by his labors, very often unproductive to himself, to swell the current of gold that has flowed in the channels of trade. The possessory rights which the miners have thus acquired under this express and implied license of the General Government have been protected by the State Courts, and are as distinctly defined as a homestead right or any other. These rights soon acquired a varying moneyed value, and hence miners sometimes sell their claims where they cannot afford the expensive means for working them; and thousands of claims are held by different individuals by purchase as well as by location. Very frequently before a vein of quartz or gravel deposit lying within rocky hills can be reached, long and expensive tunnels have to be dug out, or blasted out with powder. These costly improvements give value to the claims which in their original condition they did not possess. Many of such improvements are now in progress, and it will be years before they will be completed so as to reach the deposits, and their owners incur heavy debts to complete them. Most quartz mines and many gravel deposits lie below the water level, and are only worked by powerful pumping machinery which has been placed upon them; and the gold is extracted from the quartz by ponderous machinery and curious processes, which are only set at work at great expense. These facts are stated, and many more of a kindred nature might be, to show the great interests which have been created here by the policy of the Government, and the injustice and disasters which must follow a rude change in a system that has been consolidating during nearly two-thirds of a generation.

AN ESTOPPEL.

By that system the miners have been treated practically as the owners of their claims; they have been induced to expend their labor and money to improve them and bring them where possible to productiveness; their customs regulating the tenures have been recognized by legislation, and innocent purchasers have been induced to make investments; all business interests have become interwoven into the existing order of things, and nothing but imperative necessity overruling all considerations of public faith and local welfare, if such necessity can ever exist, can be urged to justify the seizure of these lands from their present possessors. Between private parties the facts would work estoppel in the judgment of any respectable Court, from the extreme injustice of attempting to resume rights so long dormant, which had been waived by explicit acts and words, and where the parties to suffer could not be recompensed. Hence, we respectfully urge that the faith of the Government is pledged, by its course of dealing for so many years, to continue the system its policy has inaugurated and brought to such magnitude and perfection.

IMPOLICY OF CHANGE.

The prosperity of the general mining interest and the reflex advantages to trade and to the revenue already accruing, show the impolicy of change. A system that builds up great States in almost desert regions; that opens new and increasing markets; that supplies the precious metals to fortify the credit of the Government, and strengthen its arm in war; that has vindicated itself by its great success in producing for the use of the country the long-neglected treasures of these distant regions, and which gives employment to so much enterprise and capital, cannot be broken up without confusion and distress to every interest involved. The disasters that will follow to trade and commerce by the temporary or permanent diminution of the supply of gold and silver should be fairly understood, and we shall discuss these considerations hereafter. These disasters will fall largely upon the East, and will be the penalty it will suffer for innovating legislation ruinous to our great local interest. That the present system is well adapted to the productiveness of the mines is beyond doubt; and that productiveness will be increased by a sense of security in the intentions of the Government. But some few of the effects on the miners of a survey and sale of the mineral lands by any system which does not give the present possessors the fee to their claims without price, we propose to advert to, and then to remark upon some evils necessarily incident to any system for the general sale of the mineral lands.

MOST MINERS CANNOT AFFORD TO BUY.

Strange as it may seem to those who judge of the results of mining by the published shipments of treasure, the great mass of miners are too poor to purchase their claims at any price likely to be considered an equivalent. A fact that is apparent here may be hard to demonstrate to the people of the East, whose ears have been abused by the extravagant representations of superficial observers who have visited this coast. The days when surface diggings repaid slight labor with large reward have passed, and miners now have to contend with stubborn ores dragged from great depths to the surface, or glean the fields already reaped. In the former case the expense of production is so great that moderate returns only are expected, and these are often expected in vain. In the latter the gains are usually slight. A dry winter consumes the profit of a favorable one for the placer miner; and the experience of many years in this State shows that the unfavorable seasons for this large branch of mining outnumber the good ones. A vast amount of labor is expended in "prospecting," or digging for new mines, which never yields any return. It is estimated by competent authority that all the gold ever extracted in this State, after deducting the cost of machinery, would not pay for the labor that has been spent in prospecting and mining since the settlement of the State at the rate that ordinary labor during the same time has commanded in the East. This is because paying deposits of gold are so often hard to find, and so difficult to work; and for this reason thousands have lived in poverty, returned to the other States, or given up the business of mining for other occupations. Again, taxation is necessarily high in a new State like this, where difficult roads are to be built, all public buildings, hospitals, churches and schoolhouses erected; and nothing is inherited from the past. The expense of living is great. Much capital has been sent here, but our gold flows continually out of the State to buy the

productions of the East. Great amounts in the aggregate are expended to remove families from the other States to a new home here, and houses have to be built, vineyards and orchards planted, and the country made inhabitable. All these causes and others tend to reduce the available means of the miners, among which causes may be named the thoughtlessness and improvidence perhaps not wholly incident to a new country or to mining pursuits. From whatever cause, the fact remains. And if the Government sells the mines to those who can buy, the miners will be able to compete in a very limited degree, and therefore will be expelled from their claims.

RESULTS IF MINERS CANNOT BUY.

If the Government sells to all who will buy, and as much as they will buy—and no other system of sale seems practicable where so much is to be sold—another consequence will follow, that large tracts of mineral land will pass into the hands of speculators, to lie unimproved and unproductive. When that occurs our towns in the mines will become depopulated, for the activity of the mining business is all that keeps them in healthful existence. By a sale of the mineral lands our homes and all improvements are sold out from under our feet, for these are built on mineral lands, and we shall be persecuted with writs of ejectment and driven out. No fanciful picture is drawn here; but a consequence is pointed out which miners see clearly in the future if the Government sells the mineral lands. By its legislation the Government has reserved these lands from survey, from pre-emption, from private entry, or entry for homestead purposes, and we cannot cite any statute to protect even the birthplaces of our children from the purchaser. We can appeal to nothing but the good faith and magnanimity of the Government, now, before the threatened legislation is had, to secure us from these consequences. Nothing need be added to enforce the consideration that if the miners cannot afford to purchase their claims they lose their mining improvements on which they have expended the labor and profits of years. Many formidable evils would be avoided, if the Government wished to divest itself of the fee of the mineral lands, if it would donate to the present possessors of mines the claims which they hold under mining customs, without regard to the size or shape of said claims. Perhaps it is not too much to expect that this will be the first step of the Government if it disposes of these lands, in view of the considerations already urged.

OBJECTIONS TO ANY SYSTEM OF SALE.

But there are objections to any system of survey and sale of the mineral lands. Such sale would lock up these lands from general prospecting—the means by which new mines are now found, and new sections of the country developed. That feature of the present system which has given it so much efficiency, and extended discoveries, would be destroyed; for no man could prospect on the land of another, and no one would seek a mine which he had not the ability to buy. Prospecting is usually done by adventurous men, without paying mines or much financial means, who are useful as pioneers, and whose occupation would be gone if the mineral lands were sold.

DESTROY CANALS AND HIGHWAYS.

Another serious objection to any system by which the fee to the mineral lands shall pass into the hands of private proprietors, is found in the fact that for many years past there has been growing up in this State a great canal or ditch interest, which would be destroyed. These ditches take water from the mountain streams, and convey it to distant points for mining and other purposes. They are dug and flumed along rugged hillsides, at vast expense, stretching from town to town, and are indispensable to the prosecution of mining. Their aggregate cost and value is counted by millions, and some of them cost, singly, from a half to a million of dollars. By means of the water bought of the companies owning these ditches the miners are able to work their claims. The General Government has been collecting a per centum on the gross proceeds of the sales of water from these ditches for several years past, and is bound in honor to protect their rights of way. If the mineral lands traversed by these ditches—and they net the whole mining region—pass into the hands of private parties, those who acquire the fee can treat the ditch owners as trespassers, and their improvements as a nuisance. The owner of a few rods square of land over which such a ditch passes, can compel the owners of the ditch to turn out their water, and thereby destroy the whole value of the property, and stop all placer mining operations for miles around, or to pay blood money without mercy for the privilege of crossing the strip of land. What may be done in one instance may be multiplied, until property rights and values of immense importance are annihilated, and placer mining becomes impossible. This danger is guarded against under our present system by certain distinctions made by our Courts, which would be inapplicable if the lands were in the hands of private proprietors, and by the fact that the important ditches generally have a priority of location which can only be affected by the Government title. What is said of ditches, so far as the danger to the right of way is concerned, is true of all public highways, toll roads, etc. These would be all broken up until State law authorized some system of condemnation of private property in their favor, which would not be possible upon legal principles in behalf of private ditch companies, and which would at best involve the counties and road companies in heavy outlays to re-establish their roads.

These are momentous considerations; and we especially direct notice to the danger of giving power to any of a thousand men who may buy land crossed by a great canal extending for miles, to destroy its owners and its usefulness to the public by breaking up the extensive mining enterprises dependent upon it. Any legislation like that we have referred to would leave these great interests defenseless, and seriously damage every mining county in this State. That such legislation would diminish the production of gold and create commercial distress, need not be reiterated.

MINERAL REGIONS UNADAPTED TO AGRICULTURE.

There is no presumption that the lands in the mineral regions which are not known to be valuable for mining, are good for agriculture, while the fact is otherwise. The soil is rocky and shallow, generally clayey, frosts are late, and though small orchards or a few vegetables may be raised by a system of irrigation too expensive for ordinary farming, yet there is nothing in the agricultural necessities of the country making it necessary or proper to subject any of the lands of the mineral regions to the operation of the general rules and the policy of the Government pertaining to agricultural lands. But in the most forbidding spots, beneath the deepest deposits of loam, as well as in the most craggy hills, energetic prospectors continually find gold deposits, and this especially since quartz mining has grown into importance, and ledges are traced for miles through lands where they lie deeply buried. Hence, there is no proper assumption that agriculture is impeded or agricultural lands locked up by the present system. No sensible agriculturist would venture to pursue his calling in such forbidding localities, did not the mines afford him a market remunerative of the cost of extracting produce from such stubborn soil. The miner does not occupy and waste lands which could be profitably occupied by any one else; and the attempt by the Government to select out and sell agricultural lands in the mines would benefit no one, while it would injuriously restrict mining enterprise.

MR. SHERMAN'S BILL.

We have before us a copy of a bill introduced into the Senate of the United States by Hon. John Sherman of Ohio, which is liable to all the objections that we have urged to any sale of the mineral lands, and has some features of its own calculated to make such sale peculiarly oppressive.

ITS MINIMUM PRICE.

The first feature of the bill that attracts notice is the exorbitant minimum price fixed for the lands—fifty dollars per acre! The hope of lost angels for heaven would be as reasonable as the expectation that the great proportion of the miners would continue to hold their claims and pay such a price for them. No argument is offered on this point. The bill contemplates an impossibility. A limited number of claims may be sold, especially those which are made tempting to capitalists by expensive improvements or exceptional richness; but mining claims as a rule are not worth fifty dollars an acre, and if they are common miners cannot buy them.

DIVISIONS AND QUANTITIES.

The bill contemplates rectangular divisions and a too small maximum quantity. Any one conversant with mining localities knows that what may be called for convenience "square claims" and regular lines, are impossible. Claims are almost universally oblong—long and narrow; and this is unfailing in quartz claims. Quartz claims cannot be intelligibly measured by the acre, but by the number of feet on the ledge, "following its dips, angles and variations." In placer mines, especially in deep diggings, where expensive tunnels are frequent, a limit of forty acres would usually afford no margin for profit; and this is shown by the fact that such claims usually exceed, by very much, that amount, and yet are deemed reasonable in quantity. Unless a law could be passed making deep gravel deposits, which are difficult of access, very rich, or giving larger bounties for working them there are paid to encourage fisheries, this limitation would prevent such mining. One tunnel in Yuba county is said to be three fourths of a mile long, to have cost several years of labor and $80,000. Forty acres at the end of such a tunnel would embrace much useless ground beyond the lead, if laid out in a square block, as the bill provides; and the portion of the lead embraced would not pay one-sixth of the cost of the tunnel and other heavy expenses of working. Of course, under the system proposed in this bill, such enterprise would be impossible in the future. But, even in the case referred to, the owner would exhaust his privilege in buying the forty acres in the bill and could not buy the land traversed by his tunnel; so he would have no outlet, and could not work the claim. To ravine and cañon claims and to tail flumes, such a measurement would be as impossible of application as to quartz ledges.

RESTRAINS ENTERPRISE.

The bill allows no man to buy and hold at one time more than one claim. By such means the mining which any man may conduct is dwindled to insignificant proportions, and men of enterprise and capital have little motive to remain in the business of mining. No person is permitted to purchase a second claim till he has shown to the satisfaction of the land officers and geologist that he has worked the mineral out of his first claim, and that it will no longer pay the expenses of working; and he must, before being permitted to make a second entry, "sell at public auction, to the highest bidder for cash, the land embraced in his first entry, and which he proposes to abandon." The idea of abandonment is inconsistent with that of sale; but how is he to sell mineral land which will not pay the expenses of working? To work his first tract he may have run a costly tunnel, which would be useful in working the second; but under the bill he must divest himself of it by sale to somebody who has no use for it.

HOW NON-RESIDENTS ARE AFFECTED.

Under our mining system persons not actual residents of a mining district invest capital in its mines, and become shareholders in its companies. Many persons living in the East, especially in New York, have thus invested, to the benefit of the general mining interest. Some miners go East and elsewhere to live, leaving their shares in mines to the care of their partners. In the long lapse of time, by purchase, descent and migration, interests in such property of this character have been acquired and are held by non-residents. The bill provides that any shareholder who is not a resident of the district shall acquire, have, and hold no right of pre-emption, entry or title. It matters not how old his right, how great its cost, he is cut off. We object to this feature of the bill, not on our own account, but on behalf of the people of the other States who are affected by it. The mines have heretofore been open to the acquisition of all the people of the United States. The confiscation contemplated strikes at those who, not being or continuing residents here, have availed themselves of this privilege. The people of California have never considered themselves the exclusive possessors of the mines in this State, and have never attempted to make a selfish rule excluding the participation of non-residents therein. They desire the application of no such rule by the Government.

ABSENT HEIRS.

If any person dies, leaving heirs residing out of the mining district, such heirs cannot inherit his claim unless they move into the district and mine it themselves, but it must be sold by a Probate Court at the end of an expensive process. Such sale would usually be a sacrifice, and the rule would bear with great oppression on females and minor heirs. But why the Government, after selling the land for the exorbitant price of fifty dollars per acre, should seek to hold a qualified fee, to restrain descents and compel and control alienations, does not seem apparent. Judicial sales of mining property would seem to be impossible under the bill, as also the sale by the Probate Court in the case of absent heirs, from the difficulty of finding purchasers where no man is allowed to buy a claim who already holds one. The value of property is principally dependent upon the price it will bring in open market. The bill ingeniously limits the number of persons authorized to purchase, and especially of persons likely, from their business pursuits, to purchase such property, so as almost to destroy the market and value at once.

LUCUS A NON LUCENDO.

The bill provides that persons buying claims in the same subdivision shall hold as tenants in common, with interests in proportion to the relative extent and value of their improvements and mines. Take the case of two quartz ledges traversing the same piece of land; they are independent claims by mining customs, and the owners have no business connection, and may desire none. Who shall decide as to the richness or value of their respective claims and the dependent interests of the proposed tenants, especially if the leads are not fully developed? To place men in the peculiar confidential relation of tenants in common, without their choice, seems oppressive; while litigation for partitions and accounting, embarrassed by difficult questions of relative ownership, seems to promise abundant harvests for attorneys at the expense of mining interests. If it is intended that the purchasers of a subdivision shall hold their respective parts of the tract separately, then they are not tenants in common, and the phrase is infelicitous, and the provision causing their rights to be dependent on values is inoperative.

SPIES AND INFORMERS.

The bill contemplates coinage districts, and restrains the transportation of the precious metals uncoined from one to another, under penalty of confiscation; and to work efficiency in this respect, encourages spies and informers, by giving to them one-half of the confiscated property. Such a system is repugnant to our notions of republican administration, and is unnecessary for revenue purposes, for the present tax on gold and silver, besides coinage duties, is generally and cheerfully paid. It would prevent a person taking to the East specimens of gold or gold-veined quartz, which he might wish to preserve or give away as presents, and, so far as we can see, prohibits the transportation of uncoined gold to be used in manufactures or the arts.

OTHER CONSIDERATIONS.

We have referred to this bill at length, because it illustrates objections that will be likely to exist in any law changing the relations existing between the Government and the mining communities; but we call attention to the fact that the great objection to such change does not arise out of the details of this bill to which we have alluded, but out of the disturbance of an order of things so fully established, so long fostered, so beneficial to all concerned; a system under which the clients of the Government felt secure in their reliance on its good faith and tenderness, and which has become interwoven with the very structure of our society. In the language of one of the resolutions of the great Convention whose sentiments we reflect, we "respectfully petition the Congress of the United States to respect the rights and property interests which the policy of the Government, long continued, has created and fostered." California has deserved better treatment from the Government and people of the East than it will receive if its great property interest is destroyed by hasty or injudicious legislation. We have paid our taxes, amounting to enormous sums derived from customs and internal revenue, with promptness and good feeling. We have faithfully supported the Government in its period of peril. Though a succession of dry seasons impoverished us by blasting our harvests and suspending our placer mining, our contributions to the Sanitary Fund were counted by millions, and we furnished one-fourth of all the money contributed to that great agency of mercy. The agents of the excellent Christian Commission went laden with offerings from our shores. We raised all the regiments the Government would accept for its some garrison and frontier duty, and vainly implored the privilege of raising more, to be taken East, to share in the dangers of our brethren in arms. Many of our young men went East at their own expense, and joined the regiments of other States; and California's sons sleep peacefully on many sacred battlefields of the Republic. We claim to have done nothing more than our duty; but duty faithfully performed is worthy of recognition.

TAXATION UPON THE PRODUCTS OF MINES.

There is no branch of productive industry, so little understood by those not engaged in it as that of mining for the precious metals. The very terms employed are the synonyms of wealth, and naturally connect extravagant ideas of riches with all enterprises for the production of the precious metals. The ownership of a gold mine is assumed as the possession of certain fortune, and occasional successes are heralded to the world as the rule, when they are but the marked exceptions. It would not be singular if the Federal Government should fall into this popular fallacy, and form the idea that in the mines on this coast it possesses supplies of exhaustless wealth, capable of supporting an unlimited degree of taxation; destined not only to relieve the nation from its present burden, but to secure to its citizens boundless prosperity in the future. A few simple propositions will demonstrate that these mining interests are, of all others, least able to bear a heavy weight of taxation, and that national concerns of the first magnitude will be greatly jeopardized by any rash experiments in that direction. Countries producing the precious metals are always poor. In a country so large as ours, with such varied industries, this rule will apply to those sections of it which produce them. The mere extraction from the soil of metals that may be manufactured into coin does not create wealth in the country producing. Its single product, by the invariable laws of trade, leaves at once and forever the place where it is produced in excess; while such is the character of the pursuit that no other enterprise can thrive in its vicinity except those connected directly with its own promotion. The unequal distribution and limited production of the metals still further conduce to this result; for while a large portion of the gains seeks other fields for invest-

ment and enjoyment, a still larger portion is swallowed up in unsuccessful adventures, and the evidences of its loss alone remain in the ruins of extensive works and the poverty produced by unrequited labor. Nor does the product of a successful mine bear any comparison to the proceeds of other remunerative property. The skillful and energetic farmer finds each year the product of his farm increased, the value of his land greater, and his capital thus augmented, or at least unimpaired. But the product of a mine is not its fruits but its substance; it is not the interest, it is the capital itself. The more thorough and scientific the miner, the more certain the exhaustion and consequent worthlessness of the mine; so that any tax levied on the proceeds of a mine is so much taken from the very substance of the property, and not a tithe from its increase—a share in its revenues. The fault is not in any given system of mining, but in the fact of mining. If miners are poor and nomadic all over the world, it is because they can continue miners only by often changing their places of operation, and because of the uncertain gains of the business. These incidents can only be avoided by discontinuing the principal. The necessities of the Government and people will not allow mining to be stopped by turning mining land into poor farms, and therefore these incidents of a necessary business must be accepted without being made an excuse for mischievous experiments.

TAX PAID BY PRODUCER.

Again, the tax levied upon the precious metals in the hands of the miner is paid wholly by the producer; whereas in all other cases the taxes are paid by the consumer. This is manifestly inequitable. When the burden of a national debt is to be borne, justice requires that the taxation by which it is apportioned shall be as equally distributed as practicable through the community. This is done in all other cases by such regulations as place the charge upon the consumer. The tax upon a given article is added by the manufacturer or by the miner, for coal, iron, and other non-precious metals, to his commodity; and though but a few are engaged in producing the article in question, yet as the community at large are the consumers, the burden is equally shared. As these several classes of consumers are in other branches producers, their own products are not only charged with the special taxes imposed upon them, but also with the increased cost of production dependent upon the enhanced cost of other necessary commodities. But a different rule governs the producer of gold. The value of his commodity is not directly affected by the cost of production, whether it be made more expensive from the peculiar nature of his enterprise or the taxes imposed. Accepted as the currency of the world, it possesses an intrinsic or accredited value which he cannot affect, like all others with whom he must deal, by adding to his product the amount of the tax or increased cost of production. If it is worth in the marts of trade $18 per ounce, and the tax takes from each ounce one dollar, it is his loss alone. No one shares it with him. As the miner produces nothing but the precious metals and is a consumer of everything else, he pays as consumer the tax levied upon every other industry and bears alone the burden imposed on his mine. So if by taxation the necessaries of life are so much enhanced in price that the laborer to support his family is compelled to charge a dollar a day more for his labor, the coal miner who employs him can add the dollar to every ton of coal he sells, and does so; but the gold miner cannot add the dollar to the ounce of gold that he sells. Hence, the greater the tax on this kind of mining the greater the inequality of taxation.

IS PROHIBITORY.

But this is not all. There is, doubtless, more labor expended in unprofitable mining than any other pursuit. The reason for this is obvious. The uncertain character of the business, the splendid successes that occasionally are found, and the numberless failures, give to these enterprises all the fascinations of gaming, and men cling to them from the hope of success, when any other pursuit would be abandoned in despair. Mining is thus prosecuted by thousands who derive from their mines a mere subsistence for themselves, although the gross product of the mine, expended among laborers and in the prosecution of the enterprise, may be adding large sums to the currency of the country, and stimulating every branch of industry. It is upon such enterprises that increased taxation falls with crushing weight. If the annual yield of a gold mine is $10,000, and the cost of production $9,500, a small tax on the gross yield virtually destroys the mine, throwing out of employment many men and injuriously affecting every business supported by this and kindred operations. Yet, the present direct tax almost reaches one per cent. on the gross yield, besides the license income and indirect taxes. Again, there is in the history of almost every mining adventure, a period in which extensive credit is required for the development and exploration of the mine. However valuable it may ultimately prove, the owners are the first to bestow this credit, generally by working for years without wages. But merchants and mechanics are also compelled to advance upon adventures of this character; and if the first small returns of the mine, usually falling far below the actual cost of production, are still further diminished by heavy taxation, all such adventures must cease; and mines that might in time, and with proper encouragement, have become remunerative, adding to the resources of the country, remain wholly undeveloped. We have already adverted to the necessary exhaustion that follows from the working of mines. From the result it follows that new mines must be continually discovered and opened to take the place of those exhausted and abandoned. To stimulate this, every inducement should be offered to encourage the working of mines of an inferior character—those in which the cost of working and the value of the yield are about the same. The more valuable and productive mines will always furnish to their owners all the necessary incentive for vigorous development; while, as a matter of fact, the country is far more advantaged by the production of a million of dollars at a cost of nearly a million expended in mining, than it is by the production of a million at a cost of one-tenth that sum. In the one instance a few fortunes would be accumulated; in the other, a host of paying consumers would employ nearly ten times the amount of tax-paying products, thereby adding to the national resources, and the money produced would be thrown directly in the channels of trade, without the chance of being hoarded.

ARGUMENT THAT LANDS ARE FREE.

A comparatively unimportant argument used in favor of taxation of mining industry is, that as the Government charges the miner nothing for the use of his claim, he should pay a large tax on the product. We have shown that we already pay all the tax that this peculiar kind of business will sustain; and the people of California are willing to bear any reasonable burden which bears upon the whole country as it does upon them. But the mere fact that we take this gold from the public lands does not change the matter. The government constantly gives away millions of acres of public lands as homesteads in order to build up communities and create markets. It is not proposed to levy a special tax upon the wheat and corn raised on these donated lands because the lands cost the occupiers nothing. Such a proposition would be less absurd than the argument referred to, because the producer might add the tax to the product, but yet would be seriously entertained by no one.

INCREASED PRODUCTION NECESSARY.

That more gold would be produced by the policy we recommend, cannot be questioned; and we respectfully submit that it is of more importance that the production of gold should be augmented, though without any increase of taxation, than that the same amount should be raised from taxation on a smaller gross product of gold. The government has become a debtor to its citizens and to the world to a vast amount. A speedy resumption of specie payment is indicated. This will be certainly more easily accomplished with an abundant supply of gold thrown into the circulation of the country, stimulating every branch of industry, and lured by the national securities into the nation's coffers. The enhanced prosperity of the country would demonstrate the superiority of this system to the short-sighted policy that taxes the few and thereby prevents the development and prosperity of the many. Besides, should the metallic currency of the world be materially increased, as it is likely to be from the yield of the American mines alone, this fact would of itself enable our government to discharge its present obligations with more ease than it could were not the currency thus enlarged. The product of the mines of California and Australia within the last fifteen years is estimated to have reduced the actual value of the metallic currency over twenty per cent. Should this diminution in value continue, as from increased production it is likely to, we may find that in the next twenty years one-fourth of our debt will be virtually discharged by the silent operation of this law thus regulating the currency of the world. A few additional suggestions are made in the following extract from the editorial columns of a leading journal of this State:

"The large proportion of instances in which the outlay of labor and money in searching for the precious metals results in total loss or inadequate reward gives this pursuit a claim for exemption which the enlightened legislator will not lightly dismiss. The policy of free mining has peopled a large section of California, the States of Nevada and Colorado, Eastern Oregon and the Territories of Arizona, Idaho and Montana. In the greater portion of this vast region, mining industry engrosses attention, sustains the population, and must long be the chief inducement for immigration. Every dollar of revenue the Government collects from these communities is primarily derived from their mines, and, while producing nothing but gold and silver, they are liberal consumers of all the articles upon which Federal taxes are imposed. To tax the yield of the mines to an oppressive extent is to choke the stream of prosperity in those States and Territories as its very source, to impair, if not destroy, their ability to pay their Federal taxes, and to diminish the consumption of articles from which the Government obtains a great share of the revenue which maintains its credit. To continue the present policy is to hasten the settlement of the Pacific slope, promote the discovery and development of the mines and insure a rapid increase of the amount of revenue paid, directly and indirectly, by these growing States.

"The finances and commerce of the nation call for a more extensive production of the precious metals. New York is shipping to Europe every week a half million dollars in specie. Our imports are greatly in excess of our exports, owing to the inflation of prices and the want of cotton for shipment. The balance of trade is against us and must be settled in coin. This has been the course of our foreign trade since 1861. Every year since there has been a drain of specie to Europe, and, but for the steady yield of our mines, both importers and the Government would have been greatly embarrassed, if not utterly unable to procure the gold they demanded—in the one case for the payment of duties, and in the other for the payment of interest on the public debt. In order to restore the specie basis we must not only reduce the volume of paper money and raise more cotton for export, but must increase the production of gold and silver. The development of the mines for this purpose is now used in the East as a strong argument for the speedy construction of the Pacific Railroad. In view of this condition of affairs, whatever tends to discourage mining industry, whether it be a law that interfere with possessory claims or a tax upon the proceeds of mining operations, is not only detrimental to the communities on this coast, but inimical to healthy trade and the restoration of a sound financial basis throughout the land."—*Sac. Union, Jan.* 20, 1866.

CENTRAL PACIFIC RAILROAD LANDS.

It is our duty to call the attention of the Government to the fact that no adequate means are provided by law to segregate the mineral from the agricultural lands lying within the boundaries of the grant to the Central Pacific Railroad Company. By the original statute relating to that company, it was granted land in alternate sections lying ten miles on each side of the road; but it was expressly provided that no mineral lands should be included in the donation. By a subsequent law the grant was extended to twenty miles on each side of the road, with the same reservation. The extension was said to have been made on the assigned reason that so much of the land lying within the lines of the grant was mineral that the company would get but little land. This was true so far as the spirit and intent of the legislation of Congress was concerned. The forty miles referred to traverse for their whole length to the State line some of the most important and prospering mining counties of this State; and probably nearly every acre of land from the foot-hills, which have been designated as commencing a few miles from the city of Sacramento, to the State line, is more valuable for mining than for agriculture; while upon the tract in question are thousands of placer claims, and of quartz claims and mills, valuable mining canals and ditches, and scores of thriving mining towns and villages. This region sustains a numerous population, the basis of whose business is mining, and the best and most celebrated mines of the State are there located. New discoveries of important deposits are made every year under the very shadow of the highest peaks of the Sierras, and extending through the foot-hills to the plains below. Much of the country is rugged and precipitous, all of it hilly, and little adapted by soil or climate to agriculture. Under the law as it at present exists, the railroad company are causing surveys to be made, and procuring the issuance of patents to these lands; and they have already procured patents to a large quantity of land, embracing, as we are informed, and as the Convention believed, valuable tracts of mineral land. Such acquisition was not contemplated—was in fact forbidden—by the Government when it made the grant. But the machinery of the law is so imperfect that we see no means to prevent their getting the fee to these valuable mines, and depriving the Government and its citizens of them, without further legislation by Congress. The next issuance of patents must convey to the company a region peculiarly valuable for its mines and mining improvements; and immediate action by the Government is necessary to protect this important mineral domain, and secure the observance of the terms of donation. We suggest that, the title having passed to the company by patent, the evil becomes remediless, or only remedied by greater expense and trouble than will now be necessary to incur to prevent it. As the matter stands, no question of vested rights can arise, for no right to mineral lands ever vested in the company, and Congress expressly retained the power to "amend, alter or repeal" the Act. We learn, by telegraph from Washington, that the patents thus far issued except the minerals in the land. Whether this is so or not, such exception is inoperative in fact, for the Government will never enter these lands to search for minerals, and the company or its grantees may treat all others who do so as trespassers. Besides, the law excepts not only minerals, but the mineral lands.

We believe the only safety of the Government and the mining interests is in a proper segregation of the mineral lands. To effect this object we respectfully solicit the appointment of Commissioners with adequate compensation, who shall not be stockholders or agents of the railroad company, to report to the General Land Office what lands are mineral and what agricultural, and meanwhile that that office suspend the issuance of patents to the company. The Convention which requested the attention of Congress to this important matter was influenced by no feeling of hostility to the railroad company—whose success in constructing their part of the great national highway it earnestly desired and did not doubt with the legitimate means at the disposal of the company—but merely by an anxiety that the vast property interests referred to should be protected—that the Government should be informed of the character of the lands being improperly patented to the company. In a word, the Convention desired that the Government should give to the company all its rights, but not all the rights of others. Acting upon such considerations, the Legislature of California has passed concurrent resolutions and a memorial requesting that the issuance of patents may be suspended until proper information has been obtained by the Government, which action was indorsed by the Convention.

Respectfully submitted.

} *Committee.*

The Central Mill, Virginia City.—We have already noticed the fact that Mr. George Attwood has leased the Central Mill at Virginia City, thoroughly refitted it, and put it once more in operation. The Virginia *Enterprise* gives the following additional particulars:

The crushing is done by a 10-stamp battery, the old and troublesome grinders having been thrown out. The ores are crushed dry, and the resulting powder is then placed in the reverberatory furnaces, and thoroughly roasted in order to dispel the sulphur and the arsenic and base metals contained in them previous to their being amalgamated. The process in use is the Freiberg or barrel, the same that is used in Captain Dall's mill in Washoe Valley. Mr. John B. Williams is superintendent of the mill, and also superintended the refitting. The mill is now much more conveniently arranged than formerly, and can be run with about half the number of men that were required in the old mill. In the old mill the amalgamating tubs were filled by shoveling the powdered ore into them; as at present arranged the pulp is carried by machinery to a large bin in the second story, whence it is discharged as needed into the larger hoppers from which the barrels are filled. There are six barrels, and each has its bopper, holding the proper charge of one ton for each barrel. The barrels are of an improved kind. The old-fashioned barrels used to wear out in about three or four months from the constant friction of the pulp and scraps of old iron within them, whereas the staves of the improved barrels are not worn at all, being protected by a lining of blocks of wood similar to those placed in sluice boxes in the placer mines of California as false bottoms. The end of the grain of the wood in these blocks being opposed to the friction of the contents of the barrels, they are not worn away as would otherwise be the case. To line the inside of a barrel with such blocks looks like a very difficult job, but like many other things it is easy enough when you know how. A lining of these blocks lasts about six months; the barrels remain about as good as new, and there is nothing to do but reline them. There are six roasting furnaces in the establishment, though but two of these are in use at present. None but very rich ores are worked in the mill, as the cost of working by the process in use is so great that common ores would not pay the price charged for working. The arrangements for cleaning up the barrels and straining the amalgam are convenient and perfect. The mill is now running on Savage ore, and is working about eight tons per day.

The Auburn *Stars and Stripes* mentions the capture of a white robin—all white except its breast.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, February 10th, 1866.

The Money Markct is exceedingly easy, and the supply of loanable funds is so much in excess of the demand, that some first-class borrowers are obtaining accommodations at 10@12 ₱ cent. per annum. The current rates in Bank are 1@1¼ ₱ cent. per month, upon good securities, and at the lower figure commercial discounts are freely made, with a fair amount of paper offering. Leading mining stocks are obtaining rather more favor with certain capitalists as a collateral, and a number of negotiations of this character were made this week upon favorable terms to the borrower.

Receipts of treasure from domestic sources this week have been light, and did not exceed $875,000. Bullion was in active demand for to-day's steamer, and gold bars met with a ready sale at 855@865. Silver has also been in more request, and is now qnotable at about 1 ₱ cent. premium for bars of average fineness.

The improvement in the Mining Share market inaugurated last week has continued in a material degree, and nearly all first-class stocks have been actively dealt in at higher rates. Recent developments in one or two prominent claims are regarded with much favor, and confidence in their present and prospective value have been somewhat restored. If good pay ore can be found at the depth now attained, it is thought that the continuity of certain portions of the Comstock lode, in depth and width, is well established, for some time to come at least.

Hale & Norcross receded from $860 to $800, seller 30, stoadily advanced to $1,100, and sold yesterday at $1,005@940. Owing to the interruption this week to mail communication with Nevada, advices by letter are meager, as to the progress of recent explorations, but the latest telegraphic dispatches report no material improvement in the body of ore alluded to last week, either in the north or south drifts.

Savage has also shown a still further improvement, and nearly 200 fect were sold, advancing from $895 to $980, receding to $945, rallying to $970, and changing hands yesterday at $935@920. Since the 1st of January the receipts of bullion from the mine amounted to $180,000. In addition to the Minuesota and Central mills, the Piute, Marysville, Land'e, and Santiago mills, are now employed, with a crushing capacity in all of some 130 tons of ore per day. The drift from the winze, 80 feet below the lowei level, has been driven 80 feet to the east.

Gould & Curry fell from $850 to $820, rose to $850, and closed at about $825 bid. The receipts of bullion last month amounted to $133,000. The company's mill turned out $76,836 from 2,750 tons of ore and tailings. The balance ($56,276) was derived from outside mills.

Crown Point has been inactive, but rather well maintained, advancing from $775 to $820, dropping to $775, rallying to $825, and selling yesterday at $800@835. During the month of January the company's mills crushed 1,090 tons of ore, and outside mills 210 tons, the average yield being $39 per ton. During the week ending February 2d, 490 tons of ore were extracted from this mine, 369 tons of which came from the lower level. On the vein of the latter the north drift has now extended 71 feet, and the south drift about 70 feet. A stope has been made 17 feet in hight, and 15 feet wide.

Yellow Jacket has hecn in better favor, and some 225 feet were sold, advaucing from $385 to $435, dropping to $370, rising to $450, and selling yesterday at $450@407½. Telegraphic advices speak favorably of recent developments in the lower level.

Ophir receded from $395 to $370, advanced to $450, and was dealt in yesterday at $450@435. Shipments of bullion during the first week of this month amounted to some $10,000. The River mill has stopped work for the present, and the company now propose to sel the grade of ores usually sent to that establishment for reduction.

Alpha rose from $275 to $325, receded to $280, and sold yesterday at $280@290. The company are said to be earning something over and above current expenses. Belcher fell from $200 to $155, rallied to $185, and closed at about $295, seller 30.

Chollar-Potosi has attracted some attention, and more than 600 feet were dealt in, advancing from $257 to $290, receding to $275, rallying again to $290, then selling at $285@278, and closing at $277. Intelligence from these claime is favorable, although no special change can be noted. Iu the Bajazette ground, the bottom of the stopes being full of ore, have been raising up on the face, and at that point an improvement is shown. The new station, 50 feet below the Potosi tunnel, continues to look well. During the week ending February 3d, 696¼ tons of ore were sent to custom mills. We are informed, upon good authority, that the total indebtedness of this company, both here and in Nevada, will not at this time amount to $5,000—crediting in full the recent assessment of $100 per share.

Empire Mill and Mining was sold yesterday at $215. The bullion product of this mine, last month, exceeded $39,000.

Imperial rose from $112½ to $120, fell to $113½, and sold yesterday at $114. The last clean-up of the company's two mills amounted to $31,836.44, making an aggregate of $81,256.51 for the month of January, from some 3,000 tons of ore. We understand that the surplus on hand is sufficient to cancel their present liabilities.

Bullion rose from $46 to $57 receded to $51, rallied to $55, declined to $52, and sold yesterday at $52@52½. Overman rose from $45 to $49, and closed at $50 bid.

Exchequer has been dealt in to the extent of some 800 shares, within a range of 6½@7½, closing at $6¾. Sierra Nevada rose from 6½ to 8½, and sold yesterday at $9½.

Lady Bryan has revived again, and nearly 1,000 shares changed hands, advancing from $5 to $6¾, and closing at $2½. Daney has been sold within a range of $8@9, closing at $8 asked; and Wide West was sold at $7½.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last amounted to $1,044,435,75.

.....on ....., the ..th day of ....., 186 , at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

..... Secretary.

Office.....

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by John M. Stiles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Courts of said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

THOS. B. BISHOP, Attorney. 2v12-4w

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by C. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Donnison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

POTTER & HOLLADAY, Attorneys for Petitioners. 2v12-4w

Mining Summary.

CALIFORNIA.

The immense rains which have prevailed since December have given ample assurance that the coming season will give us a bountiful harvest from the hydraulic and other placer mines of California. No doubt much damage has occurred by the sweeping away of flumes, ditches and other improvements, hut the never-failing energy of our mining friends will soon replace them, and their losses will be more or less compensated for hy the liheral supply of water, and the washing away of refuse tailings, etc.

The important hranch of qnartz mining is gaining vigor throughout the whole coast. For several months the stock in many of our incorporated companies has heen going through a concentrating process, and hetter management may he expected hereafter. Two and a half years ago people were murtgaging their property, to huy *stock* in unknown mines. Now we hear of the examination and purchase of *mines* by parties able to work them. The comparative results of the two classes of investment, so far as honest people are concerned, can be easily foretold.

ALPINE COUNTY.—The mines in Silver Mountain district are meeting with attractive results, and the value of our mines in this portion of the State muet soon become apparent. We are ohliged to our reliahle friend for the following:

MARKLEEVILLE, Jan. 29th, 1866.—*Editors Mining and Scientific Press:*—The Mullen company, in Mogul district, have struck a ledge of dark looking quartz, six feet thick. This claim was located for an extension of the Morning Star, and a tunnel started so as to tap tbe ledge several hundred feet deep; hut after running a short distance they came in contact with a ledge. After following it a few feet they proceeded to cut through it, and found some very good rock. The ore is of a dark, iron color, appearing as if filled with base metals. It shows some ruhy silver. An assay was made to-day by Dr. Waters of this place, proving $38 per ton. This assay was sampled from a quantity of the rock, eo as to get an average. The Doctor thinks it will work very easily. The ledge is probably a spur from the Morning Star. The point cut is not more tban fifty feet below the surface. As the ledge leads into tbe hill it is quite likely it will improve. The walls are well defined. The lode is accompanied with mud casings, and the rock is easily taken out with a pick and shovel.

H. M.

George Washington Company.—The Monitor Gazette, alluding to the circular of the Secretary, Mr. W. D. Root, saye: We learn with pleaeure that their affairs so long in rather a mixed state are assuming a business-like shape, and will soon he square and true. From recent letters received hy the Secretary from S. A. Hawkins, Esq., Superintendent of the mine at Silver Mountain, and published with the addrees, we shonld judge the work there to he in a most prosperous condition and the tunnel near the long-sought ledge.

Rich Croppings.—J. E. White sent down to us, on Thursday evening, some samples of top rock from the St. Lawrence claim, in Scandinavian Cañon, that exhibits tbe pure *plata*. The St. Lawrence is a northern extension of the Wide West, and from the appearance of the qnartz eent ns, we should pronounce it Buckeye No. 1.—*Silver Mountain Bulletin.*

The last named paper encouragee the disposal of a portion of the claims of tbe Buckeye Co., No. 1, to an Eastern company for whom the Messrs. Pilkington Bros. are agents.

CALAVERAE COUNTY.—*Hill Claim.*—Thompson Wilson & Co., have a claim on the side of Douglas Hill, on which they have snuk a shaft twenty-seven feet, and have run a drift about twenty feet in one direction and in another ahout fifty, from which they are getting very good pay dirt, with every prospect of striking it better as they approach the bed-rock. The dirt is cemented gravel and hard to wash, which is the case with most of the pay-dirt in this hill. McGarr and McMiniman are drifting dirt from their claim which prospects well, and from which they expect to get good pay. Their shaft is about thirty feet deep; from the bottom of which they have driftcd about two hundred feet on Jordan Hill.

Barker, Anert, Shaw & Co, are getting from six to eight dollars to the hand from their hydraulic diggings, employing five or six men. The Nohle Copper Mining Company have struck the main vein. This will give encouragement to other proprietors in the vicinity.

MARIN COUNTY.—The Ewing claim, near Bolinas, has struck a vein of twenty per cent., copper ore two feet thick, and is taking large quantities for shipment.

NEVADA COUNTY.—We extract from recent dates of the Nevada *Gazette* as follows: At Hunter Hill, Clay & Co. have struck the pay lead and are taking out very rich cement in considerahle quantity. Their mill will be started immediately.

Cozzens & Garher, whose mill is situated between Red Dog and You Bet, have been crushing extraordinary rich cement during the past week or two, and expect to make a hig clean-up.

Denois McKeon and others are putting up pipes and other fixtures to work a hody of hydraulic claims near Peck's Ravine, to the right of the ridge road leading to Rough & Ready. The claims cover some twenty-five acres of land, have a good outlet, and are believed to be rich. They were worked by McKeon some six years ago, and paid very well by the old sluicing process.

Water is reported plentiful at Little York and vicinity.

The *Transcript* says: Miners are engaged in ground sluicing in the ravine just below the Union Hotel, in the city of Nevada. The ground in that neighborhood is said to be very rich, and old miners tell us that an immense fortune could he taken out along the line of Main street.

From the Grass Valley *National*: A splendid ledge was discovered a few days since, about three miles below Nevada. It ie called the "Git-up-and-git."

Some very rich rock is being taken out of Hueston Hill. It is almost, if not quite as good as that from the Ophir Hill.

Lee's mill, now heing constructed on Ophir Hill, is nearly completed. It will undoubtedly be the finest quartz mill in tbe State of California.

Stiles' quartz mill, near Nevada, is now kept constantly at work upon rock from the Star Spangled Banner ledge. They are running eight stamps and the same number of pane in use. The rock ie paying well.

The famoue Watt claims have been worked out to the line, and operations suspended. The Watt Brothers have been successful miners and seem to enjoy to a remarkable degree the good will of their neighhors. They own an interest in the Eureka mine, one of the richest in this region, and will continue mining operations, probably for some time to come. The first extension on the late Watt claim at Rocky Bar, or Massachusetts Hill, is that of the Stockbridge Company—the next that of Con. Reilly and Martin Ford, and another that of the French Company, of which A. B. Brady is Superintendent.

EL DORADO.—The Placerville *Mirror* says: Two thousand tons of copper were shipped from the Latrohe miues during the six months ending January 1st. It is expected that the quantity will he considerably increased in the next six months. The mines are very closc to the Placerville and S. V. R. R.

SHASTA COUNTY.—The *Courier* reports the following: On the 13tb Jan., the Highland Company cleaned up $4.747.91 from a two weeks run. During the year ending December 31st, 1865, the Company took out $67,249.12, and paid between eight and nine thousand dollars to each share in the company—five sharee in all; and their mioe is now looking better than when they commenced work January 1st, 1865.

Tbe editor of the *Courier* discloses his belief that "Salt Pork Ridge" is rieb in gold, and adds: "who will try it? A company of six miners could do it witbout trouble, and make a fortune by it."

Washington Company.—This company took out of their claim, during the year 1865, $20,112 59, but have not paid a dollar in dividends. This is the oldeet miue in the county, and is more fully proved than any other. By the 1st of March the Washington will in all probability be proved for twenty years' work, and then dividends will gladden the hearts of shareholders for a long time without intermission.

SIERRA COUNTY.—J. F. Cowdrey, Esq., has leased the ledge of the Slug Cañon Quartz Co., and resumed work with a 5-stamp mill, says the Downieville *Advocate*.

SACRAMENTO COUNTY.—The *Telegraph* says the mines at and near Folsom are all paying wages. Tbe mines at New Diggings, which have been recently discovered about two miles from Folsom, are making from four to five dollars a day to tbe hand.

YUBA COUNTY.—Brown's Valley, Jan., 1866. *Editors Press:*—The importance of the mines of Yuba county is such that I deem it hut just and proper that your readers should, from time to time, learn something ahout them. As to Brown's Valley, tbe general despondency in mining and mining transactions bas, during the last two years, greatly retarded the development of our mineral resources. Lack of faith bas kept back the needful means, without which there can certainly he no successful mining.

Our quartz claims suffered much even from the first rains of the present season. The Jefferson company, for instance, lost nearly two months' time in pumping and changing machinery, pumps, etc. They have, however, still a most substantial ledge of rieb quartz, and will soon he ready again to declare their regular monthly dividends of $20 per share.

The Dannehroge company have again found tbeir former pay streak, and would he doing well if it were not for the too great volume of water they also have to contend with.

The new machinery (30-horse power) of the Yuha company is giving good satisfaction; the company is already taking out good quartz, and things, generally, look encouraging in this claim.

The Pennsylvania company will resume work within a few days. The parties now holding the stock of this company are ahle and willing to develop this claim without any further interuption.

There are, certainly, a great many good quartz claims at and around Brown's Valley, but as to the so-called Pennsylvania lode, on which are tbe Dan. Webster, Pacific, Jefferson, Pennsylvania, Burnside, Paragon, and, perhaps, other claims, there can he no doubt but that it will soon be found to hc onc of the very hest on this coast. It is, therefore, much to he regretted that, for lack of means, many of these claims are not worked at all.

It is, indeed, a pity to see so many of our miners and enterprising citizens heading their steps and risking their money, time, and, perhaps, their lives, in far distant countries, when we have so many promising and good mines close at hand.

Besides Brown's Valley, we have in Yuba county a great many other quartz veins, which, certainly, would prove remunerative if they were but worked and managed with the same economy, knowledge, or experience, which we generally deem requisite in order to succeed in our own private business concerns. Five dollars per ton will cover all expenses in working quartz in Yuba county.

About French Town, near the Oregon House, may he seen more good and substantial quartz ledges than can, perhaps, be found in this or any other mining district in California. So far, scarcely any attempt has been made to prospect them. Some, however, have been prospected, and, according to assay memorandums, which I have seen myself, they seem to pay from $30 to $40 per ton—namely, ahout $20 in silver and $20 in gold.

Our hydraulic diggings at Smartsville must still be considered as leading claims in California. The famous Blue Gravel claim continues to be the wonder of the county. The Clarks' claim, which but a short time ago became the property of Eastern capitalists, will soon be piping; the bed-rock tunnel being about completed, a rich harvest is near at hand. The claims of the Nevada Reservoir Ditch company are paying better this year than ever before, and the cleanings-up from their Blue Point, as well as Union claims, are most satisfactory. Under the able management of R. L. Crary, the President, the works of this company cannot fail to attract the attention of capitalists who can easily perceive that, with a comparatively small outlay of money, the claims can be made to yield fully as much as those of the Blue Gravel company.

M.

NEVADA.

The Nye county *News* says: Mr. Evans, of Mammoth District, came into the office, and showered upon our table, from a large buckskin wallet, several silver bricks, which, though small in size, were none the less valuable, as evidences of the richness of the mines of Mammotb District. Tbese "specimen bricks" were obtained by a rude process of reduction, the ore being worked in a quicksilver flask, then baked in a common bake oven, and also amalgamated in an oven. The following is the result of the working: From eight pounds of Silver Cloud rock, there were 3¾ ounces hullion obtained. Tbe Silver Cloud is rich in silver, and also contains a large amount of base metal, and in order to save the silver, requires skillful working. From two lots of Almaden rock, of twenty pounds each, there were obtained 2⅝ and 2⅜ ounces hullion. From the General Average claim, twenty pounds of rock, 3⅜ ounces. This was fine looking bullion, and we think shows a good "general average." From two lots of Vigilante ore, of seventeen and twenty pounds, we have 1⅛ and 2 ounces. From the Bowers, eight and a quarter pounds of rock, 1⅝ ounces; Uncle Sam claim, ten pounds of ore, 1⅜ onuces; seven pounds Josephine, one-half ounce; ten pounds Sunlight one-half ounce, about one-half of which was gold. Should the weather continue favorable, it is expected that the mill of W. T. Jones, will be in operation next week, and the above workings are merely tests to see what may he expected. The miners of Mammoth District are all hard at work, taking out good ore, and the prospect seems good for the erection of a number of mills in that District the coming season.

Among tbe claims heing most vigorously worked near tbis town, with gratifying results, we might mention the Stonewall, Indianapolis, Pleiades, Brown, Mountain Brow, Yolo, Clipper, Utica, Vanderblit, Revenue, North Star, Warreo, and many others. We predict that with tbe opening of spring, we shall see such a swarm of miners upon our hills, as will astonish even the most sanguine of the old pioneers.

BUCKEYE MILL.—The mill of the Buckeye Mining Company, near Silver City, has been attached. The mine is said to he a good one, but the new fangled machinery is no go. The quartz was to have been ground in what resembles a series of spice mills. It wouldn't work. *Enterprise.*

REESE RIVER.

The *Reveille* reports: Hunt's mill, at Indian Springs, will soon be in operation. The Lee mine at San Antonio is being worked steadily, and a large amount of ore has already been taken out; and from the size of the vein and the excellent quality of its mineral, it will easily keep the mill in motion.

ESMERALDA.

From the Aurora *Union*: Mr. Williams, one of tbe fortunate owners of the Diana ledge at Hot Springs, brought in with him on Monday last three hundred and ten pounds of bullion.

A shaft with a large amount of assorted rock in it has lately been discovered on Last Chance Hill. The rock has doubtless been pilfered from the Del Monte mine. There has been a great deal of this kind of business carried on of late. A word to the wise is sufficient.

NORTHERN MINES.

Owyhee.—The *Oregonian* tells us of a ledge called the Rising Star, which surpassing as it does even the Poor Man's ledge, must be acknowledged to eclipse any previous discoveries in all Silver-land. The specimens brought to Portland were fully eighty-five per cent. pure silver. "There is said to he any quantity of the rock in the ledge. It shows tbe character of the ledge very intelligibly. In drilling, the drill passed through solid silver, and the casing shines out as bright as a half-dollar. The same gentleman brings from Owyhee a few diamonds, which will hear inspection."

Rich Discovery in Montana.—The Montana *Democrat*, of January 10th, says that one of the richest discoveries of gold that ever happened in that Territory bas been made near the mouth of Sun river, on the south side of tbe Missouri, and within forty-five miles of Fort Benton. The gulch is very extensive, and the dirt yields twenty-five dollars to the pan. There was a regular stampede from the town of Helena for the new diggings—more than a thousand persons having left, and every horse, pony and wagon at Helena being pressed by the adventurers, who wish to secure claims.

THE ARIZONA MINES.

The *Miner* of January 10tb, says: B. Phelps Esq., of New York, for himself and others, has purchased of Henry Wickenburg, the discovery claim in the Vulture lode, containing three hundred feet, and embracing the most of the chimney of the lode. Report places the sum paid at fifty thousand dollars. Doctor Phelps has a mill on the way here. The Vickroy mill will, it is said, be placed on the Sterling lode. Major General Doubleday, and other prominent gentlemen, are co-operating with the Prescott Consolidated Mining Co., to procure machinery. We hear of several large mills being shipped from San Francisco, for Prescott, and the indications are, that we shall have lively times in the mines during the spring and summer.

BENNETT, of the New York *Herald*, is building a new printing-office on the former site of Barnum's museum. The cellar will be over thirty feet deep, to accommodate the mammoth power-presaes used in printing that paper.

THE people in the vicinity of Havilah, Tulare county, held a meeting on the 14th ult., and passed resolutions in favor of a new county, to be called Kern.

By the new fire alarm system in New York no bells are rung, but each engine company will be informed by telegraph in its own house, of the locality of the fire.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

State and Prospects of Mining at Austin, Reese River.

REPLY TO J. H. ORMTON.

Editors Mining and Scientific Press:—I have just read the communication of Mr. J. H. Ormton, on the *metalliferous* resources of this section, and also the *Reveille's* reply thereto, and am of the opinion that neither has done justice to the subject. There is much truth in some of Mr. Ormton's remarks, and much more that is calculated to mislead. His accusation against the *Reveille*—whether true or false—affects nothing when the merits or demerits of a mining district has to be discussed. The rage of spurious excitement, the wickedness or folly of those by whom it is produced, or the blind infatuation of others who permit themselves to be made the "dupes" of it—"respectfully or combined"—is no valid argument against the resources of any country. It may be proper for me to state at the outset that I do not own a "foot" of mining property in the State of Nevada, nor am I the agent of any mining company, whose property is situate within seventy miles of it. I have no pecuniary interest, "directly or indirectly," in the success or otherwise of these mines. Mr. Ormton's animadversions, "like most others that are intended to make injurious impressions," are characterized more by ambiguity and the absence of candor and truth, than by palpable misrepresentation or falsehood—*i.e.* "hundreds of the so-called mines around Austin are only 'paper-cutter' veins, most of them of no value whatever," nine-tenths of which will never pay for working. I am at a loss to comprehend the significance and propriety of the figure employed "paper cutter," as applied to metalliferous veins; but presume it is intended to represent those that are small, oblique, or transverse.

I agree with Mr. Ormton, that a large number of veins, at and around Austin, as well as in every other section of country, will not, "by" and "of" themselves, pay for a separate and independent working; but this, again, is no valid argument against the value, prospectively or intrinsically, of this or any other district. Let us rather suit our appliances to the dispositions of nature, and the exigencies of circumstances under which we are called to act. The question has not only to be asked, but satisfactorily answered—could or might not the arbitrary arrangement for the development of this mining section be made, in consonance with nature and man's acquired knowledge of some of the operations of her laws, in such a manner that success "amply, remunerative, and satisfactory," would be the result in a large majority of instances? What authority has man to issue his peremptory demands on nature—"ever liberal and generous"—as if she were his slave, and governed by no fixed and immutable laws, but merely subject to and influenced by the presumptuous idiosyncrasies or *ipse dixits* of heedless man, who willingly closes his eyes on stern realities, and pursues the phantoms of idle dreams; or, in other words, choosing darkness in preference to light, and then traduces Nature for not affording him the full benefits of ineffable sunlight?

Either of these positions is equally commendable, and as free from absurdity as the other. The question to be decided in regard to this subject, is as to whether any arrangement or disposition of mining property situate at Austin could be made, independently of an invidious selection, by which capital could be profitably invested; and to this I answer decidedly in the affirmative, and, probably, to an equal extent with any other known section of the Reese River district. That which may operate more effectually than anything else to retard progress, and militate against its immediate prosperity, is the mutilation to which this beautiful and otherwise inviting field for mining enterprise has been subjected. The majority of the lodes are not large, and many of them are, doubtless, mere branches—offsprings—having no independent existence; yet, even these have their important uses, and frequently subserve the most salutary effects on the "parent" or main trunk veins without being intrinsically valuable in themselves, possessing not only relative but corelative functions, which scarcely ever fail to be productive of some beneficial results.

It does not follow that because a certain mercantile establishment is capable of enriching an individual, it could enrich a community of individuals in the same degree. Every one knows—all other things being equal—that in proportion to the increase of participants would be the diminution of individual profits; and further, by extending this view to its legitimate sequence, by supposing that the number of partners multiplied indefinitely, and then deducting the expense of maintenance for each individual member, the probability is it would be a losing instead of a lucrative business. This applies with equal propriety and force to mining as to mercantile pursuits. Illustrations of this kind might be added indefinitely, but they certainly cannot be requisite to procure convictions in the mind of any man possessing common sense.

The capacity of metalliferous veins is limited as well as that of the soil on the surface of the earth, and these limitations or laws cannot be violated without impunity. The mining-ground of Austin-proper is comprised within certain limits—by no means extensive—and is equal, from present appearances, to support and handsomely remunerate a reasonable number of large establishments. It would be the height of folly to presume that every located vein is going to constitute a mine, and no less absurd and presumptuous to affirm that a well-selected series, in the order of nature, would fail to do so.

All that appears to be necessary to insure success to mining at Austin, is a moderate extent of ground to be selected with judgment, and its development prosecuted with judicious economy. The advent, however, of sound practical mining has yet to be inaugurated, so far as my observations have extended, in this part of the country, and not until this has been complied with can its legitimate results be reasonably expected. The country abounds with metallic wealth, but not in such condition that the disciplined energies of practical men may be dispensed with. All that we know, or can possibly acquire by experience from the most unremitting and assiduous practical application, combined with the "derivatives" from arts and sciences, will be requisite to subserve and facilitate the development and subjugation of the great resources of material wealth by which we are surrounded. Nature is, and ever will be, above art and all human experience.

Robt. Knapp.

Austin, 27th January, 1866.

[Written for the Mining and Scientific Press.]

From Our Special Correspondent.

Editors Press:—When I last wrote you, I supposed that I had probably seen as many of the mines of Grass Valley and Nevada as I would be able to do, but owing to the inclemency of the weather, and the badness of the roads, I was detained some days longer in Grass Valley than I had intended, and I improved the time by visiting some of the mines which lack of time had prevented my seeing before. On Monday I visited the

"TOWN TALK,"

Situated about a mile east of Grass Valley, and owned by Mr. T. R. Walker, and some other parties whose names I have forgotten, but all residents of Grass Valley. This is a cement claim, the gold being found in a hard, tenacious gravel, of a bluish or slate color, and which has to be crushed with stamps before it can be washed by the ordinary method. The lead or stratum of paying cement was struck in 1851, and was worked for some time with immense profit; but during the last few years this lead has been frequently lost, involving great expense and trouble. The greatest distance that any tunnel on this claim has been driven into this hill is 800 feet, but the aggregate length of all the tunnels in the claim is, I am told, about two miles. Several quartz ledges have been crossed by this company in the prosecution of their work, one of which is about two feet in width, but as they have not stopped to prospect them, their value is not known. The mill consists of eight heavy stamps with wooden stems, driven by a steam engine of 25 horse power. The cement is crushed to a coarse pulp, and the gold amalgamated in the batteries and in the sluices below.

On the next day I visited this mill and mines of the

FOREST SPRING COMPANY,

Of which Mr. Jno. H. Bayliss is superintendent. The mill was commenced in 1851, and the first crushing was in the spring of 1852. It is a water mill, with ten heavy wooden stamps, capable of crushing fifteen tons in twenty-four hours. The company own three ledges—the Norambagua, the Love Jack, and the Bourbon. The first, which is the most important, and from which the mill is now supplied, is situated near the mill, about four miles south of Grass Valley. It is a north and south ledge, having a dip to the eastward of sixteen degrees. In width it varies from four inches to two and a half feet, its average thickness being about one foot. The ore has paid no average of over eighty dollars per ton. The mine has been opened by an incline to the depth of 500 feet, in which distance two levels are opened, and ninety men employed. A drain tunnel has been commenced, which has now attained a length of 900 feet, and which, when completed, will be 1,000 feet long, and will drain the mine at a depth of 700 feet. A 60-horse engine is used for hoisting and pumping, there being but little of the latter to do, and will probably furnish all the power needed for sinking to a depth of 1,000 feet. The company's claim on this ledge is 4,300 feet in length. On the Lone Jack ledge the company own 1,500 feet, and have sunk to a depth of 500 feet. The ledge is from one to four feet thick, averaging three feet throughout, and the rock is said to pay sixty dollars per ton, though none has been worked lately, as the Norambagua furnishes all that the mill can crush. On the Bourbon ledge this company own 2,000 feet. This has not been opened to any extent, but the croppings are said to prospect well. The adjoining claim is paying well.

On Wednesday morning I embarked in the rain for Colfax. Such a trip I have rarely made, and do not wish to make again. In a constant pouring rain, over roads which swallowed up the coach-wheels to the axle, we plodded on for six mortal hours, arriving at the end of our journey of thirteen miles, to use a Hibernianism, "just in time to be too late," the train with which we should have connected having left at nine in the morning, and we arriving at one in the afternoon. Of course, nobody was to blame; the only wonder being that a coach could get through at all, and that men could be found silly enough to attempt to travel in such weather, and over, or rather *through*, such roads. Our journey was at an end, but the rain was not, and we spent the afternoon drying our garments and cracking jokes to keep up our drooping spirits.

Thursday morning dawned bright and cheerful, and the sharp signal-whistle warned us at half-past six that we must be off. The train consisted of a single "caboose car," with two compartments—one for the passengers and one for the baggage—propelled by a "pony" engine, selected on account of its lightness, the embankments of the road being too soft on account of the rain to bear the weight of a large locomotive. Even this light train proved too much for the road in some places, and what, with various accidents "too numerous to mention," we arrived at the "junction" at half-past one o'clock, having changed cars at Clipper Gap, the track being broken at that place.

Here I left the train, and started on foot across the country for this place, and arrived at the residence of Mr. Jobo P. Layne a little after dark. To-day I went with Mr. L. to look at the various quartz ledges in the neighborhood. The principal of these is the

LAYNE LEDGE,

Situated four and a half miles northeast of Folsom, which is the most thoroughly prospected, and, consequently, best known. The walls of this ledge are granite, its strike or general course being northeast and southwest, with a slight dip to the northwest. The distance between the walls is from six to ten or twelve feet, about two feet in width being solid quartz, which gives by working test from $60 to $200 in gold and silver, the latter predominating, and the remainder of the vein by a kind of brecciated rock, a portion of which is rich in gold and silver. I was shown a letter from a gentleman in San Francisco to one of the owners of the mine living in Sacramento, giving the result of a working test by Mr. Thomas Price of the former city, of a lot of rock which Mr. L. said was below the average of the vein, which paid at the rate of $75 per ton. These statements of the value of the ores from this ledge, with the exception of the last, I give on the authority of Mr. Layne, but the appearance of the rock, and the assays which he has himself made, and which he exhibited to me, are abundant proof that they are not exaggerated. This ledge has been opened to a depth of 100 feet, and has been "sunk on" at various points for a distance of 1,000 feet, showing every indication of a strong permanent ledge.

Five miles northeast from the Layne is the

GOLDEN RULE,

A new location, which has not been so extensively prospected as the Layne, but which shows in the croppings both free gold and metallic silver, and has been opened at various points for a distance of 1,500 feet, showing it to be large and well defined. It runs in the same direction as the Layne, and is believed by Mr. L. to be an extension of that lead.

With thanks to my kind friends at Grass Valley and Nevada for their attentions, and to Mr. Layne for the hospitality which I am now enjoying, I subscribe myself,

Yours wanderingly, D.

Folsom, January 26th, 1866.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

Office of the Mining and Scientific Press—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to the question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensue. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain the prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary, but it should be sufficient, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instalment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, and a fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every application for a patent, for seventeen years	15
On every caveat	10
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Mr. Wm. R. Bradshaw, is our Special Correspondent and Traveling Agent. All favors or assistance rendered him in his progress through the country in behalf of our journal, will be duly acknowledged.

SAN FRANCISCO, Jan 1st, 1866.

Mr. A. C. Knox, is our fully authorized Traveling Agent, and all subscriptions, or other favors extended to him, will be duly acknowledged at this office.

SAN FRANCISCO, Jan 11th, 1866.

San Francisco:

Saturday Morning, Feb. 10, 1866.

Endorsement by the Miners' State Convention.

The following resolution was adopted by the California Miners' State Convention, held at Sacramento, Jan. 17th, 1866:

Resolved, That we regard a mining paper or journal of great importance to the mining interest of California, and we recommend the MINING AND SCIENTIFIC PRESS, of San Francisco, to the consideration and support of the miners of the Pacific coast.

SPECIMENS RECEIVED—We acknowledge the receipt of some specimens of steatite and hydrated silicate of magnesia, each carrying coarse gold in considerable quantity. They are from the mines of W. B. Brink, located at Horse Creek, below Drytown. The specimens are very interesting, and well worthy of a careful study and examination, which they will receive. We shall take an early opportunity to report further from them.

Our Stockton correspondent, who recently furnished us a package of specimens for examination, will please excuse our delay in attending to them. We must plead other and pressing engagements; but his request shall be complied with soon. The specimens sent are probably a variety of the mineral known as "turquois," containing a larger quantity of copper than usual. This mineral contains a notable amount of phosphoric acid (PO^5)—from 25 to 40 per cent. of its weight—which is probably the chief cause of the difficulties encountered by our correspondent. We shall endeavor to give it a more thorough examination and report further at an early day.

PETROLEUM.—Mr. J. R. Johnson, of Santa Clara, informs us that they are obtaining a similar class of petroleum-bearing mineral to that described by Prof. Fleury, in a letter which was noticed at considerable length in our issue of December 23d. This substance is found appearing upon the surface, at intervals, for a distance of fifteen miles, commencing at the Santa Clara Works, and extending thence through Pescadero to a point below San Gregasis. Steps are being taken for its thorough exploration. We have been promised a sample of this mineral, from which we may be able to form an approximate judgment with regard to its identity in character with that of such undoubted value found near Mecca, in the State of Ohio, and extending thence over a large tract of country.

GOAT ISLAND, in our harbor, is not as barren as is generally supposed. The Oakland *News* asserts that it possesses several fine springs and much arable soil.

QUARTZ MINING IN IDAHO.

ADVANTAGES OF CALIFORNIA-MADE MACHINERY—IMPORTANCE OF THE NORTHERN TRADE.

Among the passengers for the East, by the steamer, was Mr. William R. De Frees, of Idaho. Mr. De Frees is one of the pioneer quartz miners of that Territory. After a pretty thorough schooling in California and Nevada, he concluded to try a new field, and started for Idaho, where he found the prospects so flattering that in the fall of 1864 he started for the East, *via* San Francisco, to interest some of his friends in the development of his newly found mines. His trip was successful, and in the spring of the succeeding year he left Chicago with a mill, which he took overland to the scene of his proposed operations. Eleven other mills were started out by other parties—all for Idaho. By stint of superior management, or good luck, or both, Mr. De Frees got his machinery through in time to put it up the same season—and he was the only party of the round dozen that did so; the eleven other mills being obliged to lay over the entire winter, did not get into operation until about twelve months after that brought out by Mr. De Frees.

Notwithstanding his good success in this instance, he informs us that he does not intend to try the experiment again; his experience is decidedly against bringing machinery across the plains either for Idaho or Montana. In the first place he prefers to have his machinery made where all the latest improvements can be adapted, up to the latest hour, and by mechanics who are personally conversant with the needs and peculiarities of our mines. No master mechanic who has never visited our mines and personally witnessed the operation of the various kinds of machinery in use there for hoisting, pumping, crushing, amalgamating and concentrating, is competent to design and construct machinery for such work. One of the greatest advantages which California foundrymen and machinists have over those at the East in the construction of such machinery, grows out of the fact that they are personally conversant with the mines and the practical operations of mining machinery. They acquire this familiarity and knowledge by frequent visits to the mines, and a careful examination of the working of their own, and the machinery constructed by others. They are thus enabled to remedy any defect which may be noticed, and are quick to perceive and suggest improvements.

Then again, in furnishing machinery for any point in the State of Nevada, or the Territory of Idaho or Montana, fully one year's time is saved by purchasing here after the machinery is ready to leave the shop, in getting the same to work. For instance, a mill is ordered for either of those places, at a foundry in Chicago and another in San Francisco, each to be ready to start as soon as the roads are favorable in the spring. The one started from Chicago consumes the entire summer in reaching its point of destination; and meets with extraordinary good fortune, if it escapes the necessity of wintering in some valley even short of its destination. The one leaving this city having the advantage of an earlier season, at the place of starting, is able to move out a month or six weeks sooner than its competitor; reaches its destination, is put up and gets well into operation before the other arrives upon the ground; which, when it does arrive there, is compelled, by the severity of the winter in those high latitudes, to remain housed, or perhaps entirely exposed to the weather, until late the next spring. In the meantime, if a good location has been made, the San Francisco mill has half or fully paid for itself.

Both experience and common sense teaches us that San Francisco is altogether preferable to any Eastern city, as a place in which to order machinery for any mines this side of Salt Lake, or even to the westward of the Rocky Mountains.

For the reasons above stated, Mr. De Frees advises those with whom he is associated at the East to send no more machinery overland; and he accordingly expects to have two, if not three more mills awaiting his order in this city, on his return here next spring, which he will take with him to Idaho, to be put up on mines in the southern part of that Territory, not far from where his first mill is at work.

There are now eleven or twelve mills in actual operation in Idaho, and fifteen or sixteen more in process of construction. There will consequently be some twenty-five or eight mills in operation there next spring; which number will in all probability be very materially increased before another winter sets in. This is a pretty good showing for a mining region so newly opened. Twelve of these mills were brought across the plains. Recent accounts from Idaho and Montana are full of promise for the future of those Territories as mining regions. What is now needed are facilities of communication between the mines and this city, which is their natural base for supplies. Great exertions are being made by Eastern merchants to secure this trade, the importance of which, within the next decade, to this city or any other which may secure it, can scarcely be estimated. If the merchants and mechanics of San Francisco allow it to slip from their hands they will lose a golden prize.

MARQUIS' SLOP-HOPPER.—Mr. John Marquis, of this city, has made application, through our Patent Agency, for a new and improved "Slop-Hopper," for sinks, cess-pools and drains, which may be described as follows: An outside cylinder or hopper is placed in the viaduct, inside of which, at the bottom, is a pipe extending upwards, one or more inches, resting upon arms; over this sets a double pan, made by placing a piece of sheet-iron around a disk, forming a bottom and top flange, the lower flange fitting loosely over the pipe, which extends up through the bottom of the hopper; this forms the lower trap, by placing water around the space in the bottom of the hopper. The lower flange of the double pan, dipping into the water similar to that of a gasometer, the water can easily flow out into the drain, but no effluvia can return. At the top of the hopper, which is of greater circumference than the bottom, is placed a sheet of metal, or flange, similar to the above-described, which forms a space between it and the inner periphery of the hopper for water. Another hopper is placed in the one already described, extending downward into the upper bowl of the double pan. The upper portion of this double hopper, as well as the bottom, is perforated, admitting water into the upper and lower traps, thus forming a double-trapped hopper, and doubly guarded against the return of effluvia, while the adjusted hopper affords a trap or receptacle for slops and the accumulating debris, which can be taken out and emptied, without polluting the atmosphere around, as the single or stationary hopper can be used without the adjustable one, and with as safe a guarantee of freedom from bad air.

IMPROVEMENTS IN MOTT'S DOUBLE REVOLVING PLOW.—In a late number of the PRESS we alluded to this truly ingenious piece of mechanism as one of great value to farmers and ranchmen. Mr. Mott, the inventor, has lately made important improvements in the plow by shortening the swivel or connecting rod, also in the manner of constructing the beam with the staging and braces, so as to combine efficiency and strength where great strain will be likely to take place. The improvement also relates to a new device for locking and unlocking, which operation can be performed with ease and dispatch while the team is under headway. A vast number of acres of side-hill land are now lying idle for want of a proper implement with which to penetrate the soil sufficiently deep for good cultivation—and turn the furrows all in the same direction or down hill. Heretofore side-hill plows have been cumbersome and unwieldy, and as difficult to manage and draw as a piece of ordnance with caisson attached, but Mr. Mott's improved plan combines lightness with strength and easy draft, and we predict that by its use many a rood of untilled soil will be made to yield its increase. Mr. Mott has made application for letters patent through our Patent Agency.

A WASHOE CONCENTRATOR.—Mr. Edwards has exhibited, at the Gould & Curry works, a new concentrator, which is described by the Gold Hill *News* as follows: The tailings are fed into a large, shallow wooden bowl, which has a motion imparted to it something like that given by Mexicans to their wooden prospecting bowls. In machines for actual working this bowl will be some seven feet in diameter, and will be lined with sheet copper, coated with mercury. In the centre of the bowl is a hole, regulated by a gate or slide, through which the sulphurets and quicksilver will be discharged into a proper receptable placed below. It is calculated that one machine will work ten tons of tailings per day—reducing the ten tons to about one ton. Whatever gold, silver or amalgam may be contained in the tailings will be caught and saved on the copper lining of the bowl, which can be cleaned off from time to time, while the sulphurets, not being capable of being thus retained, will be driven to the center of the bowl, and then passing through the opening in the center, saved as above described. The machinery by which the peculiar "pauning" motion is imparted to the bowl is most ingenious. The tailings are fed into the bowl in such a manner that they always fall upon the edge of the bowl, which is most elevated whatever way it may turn.

THE MEMORIAL.—We lay before our readers to-day "*The Memorial of the Miners of California*" to the President and Congress of the United States. It is an able document, well worthy of its authorship and the parentage of the five hundred members assembled in Convention, as well as the commendation of the thousands of earnest miners throughout the coast who will heartily indorse its sentiments. Considering the importance of having the memorial placed on record in our files, we have given it the first full publication in San Francisco, to the exclusion of other valuable matter already prepared for our columns.

MECHANICS' INSTITUTE.—The annual meeting of this society, held on Thursday of last week, was well attended. Annual reports were received from the several Committees, which were read and referred to the Board of Directors. Committee on the framing of a new Constitution, were discharged, by request. The Committee for securing a proper building lot for the association reported progress and were granted further time. The Treasurer reported some over $8,000 in the treasury and on loans. In accordance with the usual custom, a Committee was appointed to nominate officers for the approaching year, said committee to report at an adjourned meeting to be held on Thursday evening next, February 15th. We hope a full attendance will be had and a good ticket nominated. The election occurs on Tuesday, March 6th.

CORRESPONDENCE.—We have received several valuable communications this week, which will receive attention as soon as the crowded state of our file will permit. Among others, we may mention a valuable paper from Prof. Rowlandson, "Notes on the Chief Gold Districts throughout the World;" "The Tractory Curve and the Properties of Grinding Plates," apparently an able and well written article, by W. A. Goodyear, M. E.; "Gold-Bearing Sulphurets and their Reduction," by John Scott; "Yuba County Mines," by M.; "Resources of Siskiyou County," by Prof. G. K. Godfrey.

CITY COLLEGE—METALLURGICAL BRANCH.—This College has wisely adopted a new branch of instruction, as will be observed by advertisement in this issue of our paper. The services of Mr. Thomas Price have fortunately been secured to the enterprise, as Professor of Chemistry. We shall make further mention of this subject.

PUBLIC SCHOOL LIBRARIES.—A bill recently introduced in the State Senate, by Mr. Hunt, of Santa Clara, provides that $10 per annum shall be set apart for every district by the County Superintendents, provided a like amount be subscribed by the residents of the district, for the purpose of securing a library.

[Written for the Mining and Scientific Press.]

Roasting of Sulphurets.

Messrs. Editors:—Observing an article on this interesting subject from the pen of Mr. J. Mosheimer, in a morning paper of this city, in which he extols a process of his own, at the same time asserting that no other exists which will answer the purpose as well, it may interest the public to be informed that a cheap and effectual process *does* exist, and that furnaces *can* be constructed cheaply for the purpose set forth, without the necessity of our miners entering into the manufacture of crude sulphur and bisulphide of carbon, which are comparatively valueless in this market, as Mr. Mosheimer admits. I do not care to point out the defects which most certainly exist in Mr. Mosheimer's plan, my object being rather to present in a favorable light the superior claims of a discovery, made by Mr. J. A. Peer and myself, of an easy method of reduction for sulphurets of all descriptions. The necessary papers have been filed in the Patent Office for this invention, and it will be set in operation immediately.

This discovery may be briefly described as follows: A square brick furnace is erected, with the ordinary square fire-box in the same, and two small semi-circular boilers are so placed in the fire-box as to leave a space between them for the passage of the entire heat upwards to the hearth, around which the flumes pass. Two steam-drums are placed in the brick-work above the boilers, which furnish sufficient steam to run any quantity of machinery desired, as well as for the use in the furnace which shall be described presently. The hearth of the furnace, the most important part of the invention, is constructed either of soap-stone or fire-clay tiles, and is inclosed on all sides except the top, so as to prevent either the draft or flame coming in contact with the ore heaped up on its surface. The sulphurets are mixed with a definite quantity of powdered charcoal and fine salt, and well moistened with water, and are then packed closely upon this hearth to the depth of from eight to twelve inches, according to the capacity of the fire box for fuel. The mass is suffered to lie undisturbed for from three to five hours, when steam is injected under the ore by means of a series of small pipes supplied from main pipes connected with the steam-drums. No attention is necessary except to keep the temperature of the mass at a red heat for at least three hours, when the steam is let on for twenty minutes to force out what sulphur may remain, and complete the oxidation of the particles of iron. Stirring is unnecessary; in fact, it would be fatal to the operation. A high arch is constructed above the hearth, of sufficient area to allow of the expansion and free passage of the gases arising from the hearth. The flues from the fire-box also pass into this arch, and the draft carries off all the fumes as soon as they have risen to a proper distance from the mass of ore. No particles of mineral matter, be they light or otherwise, can rise from the hearth, because there is no current to carry them up. The heat is never raised so high as to volatilize even silver. And even if this should be the case, we are provided with a condenser of an improved construction, which will condense and precipitate all metallic fumes into a receiver, where they may be collected and saved. Charcoal is used for fuel, because it is the cheapest, giving out the most heat in a specified time, and is without the dense fumes and flames that accompany other species of fuel. Where steam can be had from boilers already erected, the furnace may be built without them, and supplied by a connection with the exhaust-pipe or any other.

This furnace is built with doors at each end for both fuel and ore, so that, for a hearth of the length of ten feet, there is but five feet distance to work upon. The mass of ore, when the oxidation is complete, is raked into a chute and conveyed into the pan for amalgamation. Another batch may then be placed upon the hearth in the same manner. The hearth may be built of any size, to hold a ton or more, without enlarging the fire-box to more than nine square feet, and by extending the flues. As an economical and sure method of roasting sulphurets, this furnace process meets the approbation of all *practically* scientific men who have examined it and tested its merits. To the impracticable theorist it can of course only be a wonder, which it were a waste of time to explain. A few words, however, may not be amiss in illustration of the philosophy of this discovery. The sulphurets being intimately mixed with powdered charcoal, the sulphur combines with it in a great measure, and is consumed with it and passes off in its fumes. Just sufficient salt is used to assist in disengaging the sulphur from the ore, but not enough to form a chloride with the gold or silver. The decomposition of the water in the mass allows the hydrogen to combine with a portion of the sulphur, and this, being light, rises into the current and is carried off through the chimney. Raw steam injected through the mass soon becomes superheated and decomposes, and the oxygen combines with the iron while the hydrogen carries off what sulphur may still linger in the heap. The burning of the powdered charcoal leaves the mass porous and permeable by the injected steam, so that every particle of the ore receives the benefit of it. The most refractory ores of all descriptions may be treated in this way. Neither arsenical nor antimonial ores can resist this treatment. They only require a little longer time than ordinary sulphurets. Drawings and an experimental furnace, with some of the results of operations with the same, may be seen on application to J. A. Peer, at the Fulton Foundry. As soon as a model of this useful invention can be completed, we will furnish you with an engraved illustration of the same for the benefit of your readers,

W. H. Manning.

[Written for the Mining and Scientific Press.]

Letter from J. H. Ormton.

We have before us a letter, dated Austin Nevada, January 30th, from "J. H. O.," in reply to the Reese River *Reveille's* attack upon him and his former article. It is ably written, spicy, and equal to his subject, but as it is out of the line of this journal to insert personalities (especially over an assumed name), we deem it just to quote only the most argumentative portion of the letter:

* * * * *

But seriously, all I have got to do is to treat of the facts of the case between the *Reveille* and myself touching the mills and mines around Austin.

I stated that, in connection with the Reese River district, there were over 250 stamps, either ready to work or being made ready, and the *Reveille* affirmed, in reply, that there would not be 150 when all the mills were completed. I give you a list of our mills:

Mills.		*Stamps.*
Confidence,	Yankee Blade	10
Empire,	do.	20
Mohcom,	do.	20
Midas,	do.	15
Butte,	do.	8
Keystone,	do.	20
Austin and Colfax,	do.	20
Silver Hill,	Austin	5
Manhattan,	do.	30
Boston,	do.	20
Ward,	do.	5
California,	do.	10
Union,	do.	10
Hildreth,	do.	5
Pioneer,	do.	20
Clifton,	do.	4
Parrott,	Big Creek	16
Phelps,	do.	10
Eureka,	do.	10
Lippett,	do.	5
Total		263

If the writer in the *Reveille* does not know how many stamps he has got around his quarters, the foregoing list will be of value to him, for it is certainly within ten or fifteen stamps of being correct. * * * *

J. H. Ormton.

The New Granada Mines.—We have little reliable information from the Barbacoas mines, New Granada, which, at present, are engrossing the attention of the more excitable portion of our community. The district is located seventy-five or a hundred miles inland from Tomaco, which port is situated about four hundred miles from Panama. Our best authorities agree that the mines there have been operated on for years, that they are located in an unhealthy climate, and are only to be developed under many disadvantages. Whenever we can command any facts of real value to the readers of the Press, concerning this district, we shall not hesitate to bring them forward.

Next to the Oldest.—The Mountain *Democrat*, published at Placerville, has entered upon the thirteen year of its existence. With the exception of the Calaveras *Chronicle*, it is said to be the oldest paper in the State.

Real Del Monte.—This famous mine and works were recently sold at auction, for the taxes of 1864, amounting to $608.01, to A. Gamble. There is no provision for redemption in the Nevada laws, in such cases.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents and contributors of distinguished ability in New York, Paris and London.

Miss BRADDON'S greatest Sensation Story, published from advance sheets:

RUPERT GODWIN;

—OR—

THE SECRET OF WILMINDON HALL.

A NOVEL.—BY MISS M. E. BRADDON,

Author of "Lady Audley's Secret," "The Outcasts," "The Doctor's Wife," "Three Times Dead," etc.

THE GOLDEN ERA.

NOW IS THE TIME TO SUBSCRIBE!

Opinions of the Press.

The Golden Era.—We would call the attention of all newly-arrived Californians to this excellent weekly cotemporary. We have seen the Era so frequently at the family fireside, and in the rude cabins of many industrious miners, that it would seem superfluous to recommend it to old Californians. It is the oldest literary journal on the coast. [S. F. Mining and Scientific Press.

The Golden Era, which has just entered upon its fourteenth volume, is fully entitled to be considered as the literary paper of the Pacific coast. Its proprietors understand the wants of the community, and furnish their readers with all the popular works of fiction as fast as the proof-sheets are received from the Eastern States and Europe, and with a greater variety of original matter in the line of light literature, than can be found in any similar paper on the continent.—[S. F. Alta Californian.

The Golden Era has entered upon its fourteenth year of publication. How many competitors for public favor have been started during this time, and not possessing the freshness and originality of the Golden Era, have struggled through a short, sickly existence—at last to "flicker out"—almost unnoticed. No single paper in the State is more read and admired, and friends in the States appreciate it fully as highly as the thousands here who weekly scan its columns. It is no copyist, being in all its main features Californian, and unlike the "story papers" in general, its contents are interesting to all who take an interest in the literature of this coast.—[Napa Reporter.

The Golden Era, as a good family paper, as a literary production, cannot be surpassed within the limits of America, and America beats the world in publication of first-rate literary papers. It is filled to overflowing with excellent reading matter, original and selected prose and poetry. It is now publishing, from advance sheets furnished from New York, two very interesting stories, each chapter of which is alone worth the subscription price of the Golden Era.—[Folsom Telegraph.

The Golden Era is decidedly the best journal of the kind on this coast, and, we had almost said, in the United States. It is prepared with great care and labor, and publishes an immense amount of reading matter. The serial stories of the best authors are printed in its columns, and its local gossip is always pungent, racy and instructive.—[S. F. Examiner.

The Golden Era is one of the best journals of its class in the whole country, and is carefully and intelligently conducted.—[S. F. American Flag.

The Golden Era is enlarged by the addition of eight columns of reading matter. It was never more worthy the support of the reading public than at present.—[S. F. Morning Call.

The Golden Era is decidedly the best family paper published in the State and we are pleased to learn that it is in a flourishing condition.—[Sacramento Bee.

The Golden Era, as a strictly literary and news paper, is chief among the best. Its correspondence and editorials are of that originality of style so peculiar to this coast.—[Oregon Sentinel.

The Golden Era is the best literary paper published on this coast. It abounds in stories both real and fictitious, which are worth a careful perusal by every one.—[Santa Cruz Sentinel.

The Golden Era is as good a literary paper as can be procured on the continent.—[Red Bluff Independent.

The Golden Era has entered upon its fourteenth volume. It is by far the best literary and family paper ever published on this coast.—[Sonoma Democrat.

The Golden Era is a most ably conducted literary journal, in every way worthy of its large circulation, and characterized by a flow of wit and freshness of satire in dealing with the prominent follies of the age that is truly refreshing.—[Deseret News, Salt Lake City.

The Golden Era is a fine family and literary paper, as the broad Union may where can boast of.—[Denver Rocky Mountain News.

The Golden Era is the best family journal in the United States.—[Salt Lake City Telegraph.

The Golden Era is a highly handsome quarto of fifty-six columns, comprising the freshest and the richest cream of American belles lettres. Nothing north or south, or east or west, can be compared to it as an elegant family and literary newspaper.—[Union Vedette, Salt Lake City.

The Golden Era, instead of economizing during these dull times and presenting a paper to match the times, is as brilliant as ever. It has a talented corps of literateurs, and keeps fully up to the mark.—[S. F. Dramatic Chron.

The Golden Era is now in its fourteenth year of publication, and is established on a firm basis. It has a larger number of regular contributors, and gives a greater variety of reading matter than any other paper of the kind published in San Francisco.—[Quincy Union.

The Golden Era has commenced its fourteenth year with a steady improvement in literary and typographical appearance.—[Yreka Journal.

The Golden Era began in the infancy of the State, and has grown with it, until there is now hardly a post office in the State, or on this coast, where it is not taken. It employs the best writers in the Atlantic States, in Europe, and in California.—[Colusa Sun.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the Fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers, and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

Golden Era Building,

No. 643 Clay street, near Montgomery, San Francisco

City College Laboratories,

Southeast Cor. Stockton and Geary sts.

Practical and Analytical Chemistry and Metallurgy.

THOMAS PRICE,

Professor of Chemistry,

(Formerly of the Normal College, Swansea.)

Will give practical instructions in qualitative and Quantitative Analysis and Assaying. The course qualifies students for the application of Chemistry to METALLURGY, MANUFACTURING ARTS, and MINING PURPOSES

PHARMACEUTICAL and TECHNICAL CHEMISTRY, such as is required by Medical and Pharmaceutical Students, will be taught to such students as may require it.

Course of General Chemistry.

Evening Lectures will be delivered every Tuesday, at half-past seven o'clock, P. M., in the Philosophical Hall of the College, without extra charge to the students in the Institution.

On and after the 14th of February, the Laboratories will be open every day, except Sundays, from 8 A. M. to 5 P. M. For further particulars, address

REV. P. V. VEEDER,
Principal of the City College.
Or at 406 California Street.

OUR NEW YORK AGENCY.

Mr. Geo. M Newton is our authorized agent in New York City, and will receive advertisements and subscriptions for the Mining and Scientific Press at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "Stockholder," No. 72 William street.

Mr. I. N. Hudson, is authorized to solicit subscriptions, advertising, etc., for the Mining and Scientific Press, in San Francisco, and to receipt for the same.

All the mining county papers are building largely on a long and prosperous working season, because of the vast amount of snow on the mountains. The fall of snow this year is unprecedented since 1852.

New Factory.—Work has been commenced in the new tub and pail factory just completed by Messrs. Elam & Howes, on Main street, near Market.

The Trinity *Journal* says it is estimated that in the mountain gorges running from the Weaverville Basin to the summit of "Old Bally," the snow is from ten to twenty-five feet deep.

The *Sentinel* learns that a planing and turning mill is about to be erected at Santa Cruz.

Situation Wanted.

An Engineer, who would take charge of a Stationary Engine, in the city or country, for a reasonable salary, desires a situation. Address, "Engine," Box 17, San Francisco Post Office. 5v12tf

Our Patent Agency.

The Patent Agency of the Mining and Scientific Press has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of Letters Patent from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Drawing Classes in the Evening will take place as usual. DRAWINGS FOR PATENTS accurately and neatly done.
20v11-1m

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Metallurgy.

MOSHEIMER'S CONCENTRATOR
RECEIVED THE FIRST PREMIUM
From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.
Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to
J. MOSHEIMER,
23v11qy 423 Washington street.

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,
Bryant Street, Between Third and Fourth,
SAN FRANCISCO.
The Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.
The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

Volume Twelfth.—The Mining and Scientific Press, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons" its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

It is proposed to propel the street cars on the Albany and West Troy track by the use of compressed air, to be supplied to a reservoir in each car from a great reservoir at each terminus. It is said that a car can carry enough compressed air to move it ten miles at a proper rate of speed, and that it can be run at a cost of $2.50 per day.

Santa Cruz Railroad.—An estimate made and published in the *Sentinel*, shows that thirty-one miles will connect Santa Cruz with the San Jose Railroad, and that the work can be done for $763,043.

Ripe olives were on the trees at Santa Cruz, while deep snow covered the mountains not two miles distant.

LEWIS COFFEY & RISDON,

Steam Boiler & Sheet Iron Works.

THE only exclusively Boiler Making establishment on the Pacific Coast owned and conducted by Practical Boiler Makers. All orders for New Work and the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner of Bush and Market streets, opposite Oriental Hotel, San Francisco.

H. J. BOOTH. GEO. W. PRESCOTT. I. M. SCOTT.

UNION IRON WORKS!

Corner First and Mission streets,

SAN FRANCISCO.

ESTABLISHED IN 1849.

HAVING INCREASED OUR FACILITIES IN EVERY Department, we are now prepared at the shortest notice and at the most reasonable rates, to furnish all kinds and description of Machinery, including Steam Engines, Quartz Mills, Mining Pumps of all kinds, Hoisting Gear, Gas Work, Laundry Machinery, Architectural and Ornamental Castings, Sugar Mills, Saw and Flour Mills, Water Wheels of all kinds, Hydraulic, Hay, Rag, Screw and Drop Presses, Coining Machinery, Pile Drivers, Bark and Malt Mills, and all kinds of Castings.

Engines.

Marine Engines, Oscillating and Beam; Stern and Side Wheel Boats, Locomotives, Stationary Engines, Horizontal, Upright, Oscillating and Beam, from six to fifty inches diameter. Also, Scott and Eckart's Adjustable Cut-off Regulator—best in use; W. R. Eckart's Balance Valve for Stationary Engines; Woodward's Patent Steam Pump and Fire Engine.

Boilers.

Locomotive, Flue, Tubular, Upright, Cylinder and Cornish, and every variety of Boiler Work. All sizes of tubes and pipes for pumps.

Amalgamating Machinery.

Wheeler & Randall's Improved Traelery Curve Pan, Zeuss Wheeler's improved flat bottom pan, Beldin's pan, Veatch's tubs, Prater's concentrators, Wakice's pans, Boers' pan, German Barrels, Arastra Gearing, Chile Mills, Settlers of all descriptions, Retorts of all sizes and shapes, for Silver and Gold, Portable Stamp Mills, Straight Batteries, for wood or iron frames, Dry Crushing Batteries, or machines with the latest improvements, every variety of Stamps, Mortars, Cams, Pans and Tubs.

BLAKE'S PATENT QUARTZ CRUSHERS, of all sizes.

Oil Boring Tools and Machinery,

Of the latest and most approved construction, made from drawings lately made by Prof. Blake at the oil wells in Pennsylvania.

We have the facilities for working gold and silver quartz and other ores, to test their value, by the hundred weight or ton.

Russia Iron Screens, of all degrees of fineness and of all qualities of iron.

All work done in the best manner at the lowest cash prices.

21v10 H. J. BOOTH & CO.

JOHN P. GALLAGHER. JOSEPH WEED.

GALLAGHER & WEED,

BRASS AND BELL FOUNDRY

And Lock Factory.

ALL KINDS OF BRASS AND COMPOSITION CASTINGS AND FINISHING DONE WITH NEATNESS AND DISPATCH.

CHURCH AND STEAMBOAT BELLS, OF ALL SIZES, made to order. Engineers' Gongs made and hung in the best manner. Bank, Vault, Store and Prison Locks; also Brass Padlocks and Shop Locks of various patterns, on hand and made to order.

☞Particular attention given to casting Rudder Braces and Ship Work in general.

☞All Jobs promptly attended to. Prices moderate.☜

No. 125 First street, opposite Minna next door to Pacific Foundry. 42tf

Removed from Oregon street, between Front and Davis.

PORTLAND BOILER WORKS.

MOYNIHAN & AITKEN,

BOILER MAKERS AND SHEET IRON WORKERS.

N. B.—All kinds of Boiler and Sheet Iron Work executed at the shortest notice, and on the most reasonable terms.

Mission street, between Beale and Fremont streets, San Francisco. qy29-t

PALMER, KNOX & CO.,

Golden State Iron Works,

Nos. 19, 21, 23 and 25 First Street,

SAN FRANCISCO.

MANUFACTURE ALL KINDS OF

MACHINERY,

STEAM ENGINES AND QUARTZ MILLS

DUNBAR'S IMPROVED

Self-Adjusting Piston Packing,

Requires no springs or screws; is always steam tight; without excessive friction, and never gets slack or leaky.

WHEELER & RANDALL'S

NEW GRINDER AND AMALGAMATOR,

HEPBURN & PETERSON'S

AMALGAMATOR AND SEPARATOR,

Tyler's Improved Water Wheel,

Giving the greatest power, at lower cost, than any Wheel in use. There are over 1,500 running, giving universal satisfaction.

KNOX'S AMALGAMATORS,

WITH PALMER'S PATENT STEAM CHEST,

Superior for working either Gold or Silver Ores.

Genuine White Iron Stamp Shoes and Dies

Having been engaged for the past eight years in quartz mining, and being conversant with all the improvements, either in Mining or Milling, we are prepared to furnish, at the shortest notice, the most perfect machinery for reducing ores, or saving either gold or silver. 13v10qy-tf

To Printers.

We have for sale, at a bargain, a Second-hand Half-Medium (largest-size), Ruggles' Engine Job-Printing Press, of most approved pattern. It is in excellent condition, and warranted to work as good as new. Apply soon, at the office of the Mining and Scientific Press. ¢ 19v11tf

STOCKS IMPROVING.—By reference to the Weekly Stock Circular upon another page, it will be observed that mining shares generally are improving. A recent good strike in the Hale & Nocross seems to have had the effect to vitalize the market. The Virginia *Enterprise* gives us the following intelligence concerning the present condition of the Hale & Norcross mine: At the point where the much talked of strike has been made, we found a number of miners at work taking out ore. This spot is about 700 feet below the surface, and is nearly 200 feet lower than the Comstock vein has ever yet been tapped. The vein or deposit of ore is from fifteen to sixteen feet in width, with clay walls on both sides. All the rock between these walls is taken out for working. It will probably average $60 or $70 per ton, though assays showing the ore to go far above these figures have been made. There is a little black sulphuret ore in the deposit; it is principally chloride ore and has a greenish tinge in the walls of the mine or when fresh dug. The vein has been explored lengthwise for a distance of about sixty feet, and has been worked upward but one floor above the level of the car track. The deposit appears to widen as it is followed northward. About thirty tons of ore are taken out per day, but in a few days when room is made, more men will be set to work and about fifty tons per day will be taken out. That this will prove an extensive and lasting deposit is shown, we think by its being encased in well defined clay walls. Had it occurred in the mass of vein-stone without any particular houuds, we should be inclined to consider it a mere accidental hunch, liable to be lost when followed in any direction. The finding of so large and rich a deposit of ore at this depth is most encouraging to all companies engaged in working claims upon the Comstock lead. The works are perfectly dry at the point we have been speaking of, and the chances are that the company might even go much lower and not be trouhled with water.

QUARTZ OPERATOR'S

HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODEIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals, an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In the preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

Published Every Saturday.

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Men of the Pacific Coast, which cannot be derived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now brighter than at any former period. Our facilities for furnishing a valuable paper are constantly increasing.

Following are some of the many opinions generously expressed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information for the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence.—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, Ne.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even and bracing to be found in the State. The grounds command a view unsurpassed in the world. The institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excessive toil, exposure, or enervating habits, contracted through ignorance of its consequences, may withal find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, Intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Neuralgia, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, referring to metals, the miasma of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only truly healthful boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in this bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, (both in Sacramento and San Francisco) has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured in a spring term from four to six weeks at our Cure, and at the mere cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn of a single regret from husband or friend of the time or means they have expended in Hygienic Medication.

NEW YORK, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant Diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygieo-Therapeutic College.

To all whom it may concern:

I have known Dr. Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science.

L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 11 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.

New Mining Advertisements.

Continued Mining Advertisements will be found under another head

Providence Gold and Silver Mining Company, Nevada District, Nevada County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 5th day of February, 1866, an assessment of one ($1) dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of March, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 31st day of March, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, No. 10 Government House, corner of Sansome and Washington streets, San Francisco. feb10

Southern Light Gold and Silver Mining Company, Reese River Mining District, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 6th day of February, 1866, an assessment (No. 8) of twelve dollars and fifty cents ($12.50) per share was levied upon the capital stock of said Company, payable immediately, in United States gold or silver coin, to the Secretary, at his office, No. 228 Front street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of March, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 26th day of March, 1866, at 3 o'clock, P. M., to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

E. J. DRINKHOUSE, Secretary.

Office, No. 228 Front street, San Francisco, Cal. feb10-4w

United States Mining Company.—Location: Virginia District, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 7th day of February, 1866, an assessment of fifty (50) cents per share was levied on each and every share of the capital stock of said company, payable immediately, in gold or silver coin of the United States, to the Secretary, at his office, or to F. A. MARSTON, Virginia, Nevada.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of March, 1866, will be advertised as delinquent, and unless paid, will be sold on Saturday, the 31st day of March, 1866, to pay said delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, No. 10 Government House, corner Sansome and Washington streets, San Francisco. feb10

Mining Notices—Continued.

New Mining Advertisements to be found under another heading.

Animas Silver Mining Company, Ventenas, Durango, Mexico.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 30th day of December, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.

And in accordance with law and an order of the Board of Trustees, made on the 21st day of December, 1855, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the office of the Company, by Jones & Bendixen, on the 6th day of February, 1866, at the hour of 1 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

N. C. FASSETT, Secretary.

POSTPONEMENT.—The above sale is postponed until Friday, the 16th day of February, 1866, at the same hour and place. By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street, San Francisco, Cal. jan20

Evoca Consolidated Copper Mining Company,
Location of Works: Court Hill District, near Black's Ferry, Del Norte County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 31st day of January, 1866, an assessment of twenty-five (25) cents per share was levied upon the assessable capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, at No. 537 Washington street, room No. 3, in the City and County of San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of March, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 19th day of March, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

CHARLES E. ABBOT, Secretary.

Office, 537 Washington street, Room 3, San Francisco, Cal. feb3

Great Western Tunnel and Mining Company—Location of Works: Aurora, Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 28th day of December, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Charles Rohrle	327	100	$10 00

Charles Rowell	292	100	10 00
Charles Rowell	293	40	4 00
Charles Rowell	306	48	4 80

And in accordance with law, and an order of the Board of Trustees, made on the 28th day of December, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, by Olney & Co., at No. 626 Montgomery street, San Francisco, Cal., on Saturday, the 10th day of February, 1866, at the hour of 11 o'clock, A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

JOS. C. FORD, Secretary.

Office, No. 20 Exchange Building. jan27

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpine County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 20th day of December, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

MINING LAWS AND FORMS.

Third Edition revised and enlarged.

Compiled by H. R. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

Published by H. H. BANCROFT & CO.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on the coast.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

Owens River Canal Company, Tulare County, California.

And in accordance with law, and an order of the Board of Trustees, made on the said 4th day of January, 1856, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, by Messrs. Olney & Co., at No. 626 Montgomery street, San Francisco, Cal., on the 21st day of February, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

JOSEPH GREEN, Secretary.

Office, 330 Davis street, San Francisco. feb3

POSTPONEMENT.—The above sale is hereby postponed until Friday, March 2, 1866, at the same hour and place. By order of the Board of Trustees.

feb10 JOSEPH GREEN, Secretary.

Yuba Gold and Silver Mining Company, Brown's Valley, Yuba County, State of California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 1st day of January, 1866, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Berges, P	36	1	$ 8 00
Couturon, J B	326	2½	7 50
De Montpreville, C	89	12	36 00
De Montpreville, C	90	13	39 00
Hochstadter & Bro	244	20	60 00
Hochstadter & Bro	249	10	30 00

And in accordance with law, and an order of the Board of Trustees, made on the 1st day of January, 1866, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, by Messrs. Olney & Co., at No. 626 Montgomery street, San Francisco, Cal., on Saturday, the 17th day of February, 1866, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

P. R. RINGSTROM, Secretary.

Office, 210 Pine street, up-stairs, San Francisco. fe3

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

COPPER SMELTING WORKS.—The Great Central Company of Arizona, says the *Alta*, has recently shipped a full set of smelting furnaces, with steam power and all necessary machinery, tools and supplies for their mine, having a large amount of rich copper ore already out and ready for smelting. The smelting works will be erected at Williams' Fork, near its mouth, but a short distance from steam navigation on the Colorado, and will be in running order, if no mishap occurs, before the 1st of April. These are the first regular blast smelting furnaces ever sent to Arizona, and upon their seccess depends, in a great measure, the immediate development of immense mines of copper, gold, silver, and galena ores of the particular character found in that section of the country, and now lying idle and unproductive for want of means to profitably work them.

J. B. CONE, BUSINESS AGENCY.—Makes private sales of Property and Business Places of every description, in the city and throughout the State; procures partners with large and small amounts of money; negotiates sales o mining property, and does a General Agency Business. Patronage solicited by mail, express, or by personal application at the office, 402 Montgomery Street, San Francisco, California. 23v11tf

Just and True Economy

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES AND SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st: The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by ONE HALF than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it

DEWEY & CO.,
4vII Office Mining and Scientific Press.

A Good Financial Weekly.

The Stockholder:

MONITOR OF FINANCE AND INDUSTRY,

Is published every Tuesday Morning,

At 72 William street, New York,

—GIVING—

Quotations of all important Bonds and Stock Securities in the United States; GOVERNMENT, STATE, CITY, BANK, INSURANCE, PETROLEUM, MINING, and other miscellaneous Joint-Stock Organizations, with the Financial Statements of the same; Notices of Payment of Interest and Dividends—

fact, all matters that can be of interest to Security-holders.

Its columns will be found replete with important and useful financial information.

The Quotations given are correct, and may be relied upon either for the purchase or sale of Bonds or Stocks.

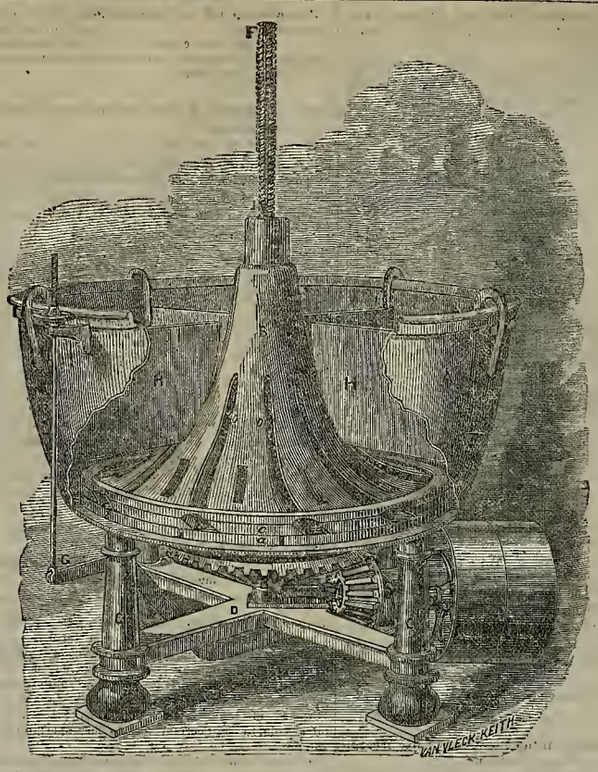
THE STOCKHOLDER is the *only strictly financial paper published in the United States.*

TERMS, FIVE DOLLARS PER YEAR.

All letters should be addressed,

GEO. M. NEWTON, Publisher,
5v12tf 72 William street, New York.

SUBSCRIBE FOR IT.—The large, illustrated sixty-four column weekly newspaper—the San Francisco MINING AND SCIENTIFIC PRESS—should be taken by every miner, prospector, and intelligent citizen throughout Colorado, as it gives a mint of most useful information to be gained no other way, on mining matters generally.—[Rocky Mountain News.



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and o, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

THE LATE EARTHQUAKE IN SONOMA COUNTY. The Petaluma *Argus* of the 1st, says: "At about half past ten o'clock, A. M., on Friday last, a severe shock of an earthquake was experienced in this city. It came with a quick, chopping motion, giving the *Journal and Argus* building one lurch which caused a *stampede* of all hands to the street. There was no damage done. At Sonoma the shock was severe."

THE great entertainments in human society are refined thought, intellectual conversation, and elegant reading. These endowments add brilliancy to youth and beauty, and, when all other charms are departed, they make old age sacred, venerable and beloved.

AUSTRALIA has been visited by severe storms. A vessel at Newcastle, and a number of cattle, were struck by lightning. In one district all the crops were ruined by hail.

THIRTY plundering street-car conductors have been detected, in New York, by female spies.

BY MAIL.—The MINING AND SCIENTIFIC PRESS will be sent by mail to any part of the civilized world. In case of removal, subscribers have only to inform us of the post-office address of their old and new location, and the paper will be sent accordingly.

BACK VOLUMES.

Back files of the MINING AND SCIENTIFIC PRESS, from January 1st, 1861, to the present time, will be furnished at $3 per volume of six months; bound in cloth, $5

SEND US WORD.—If any subscriber to this journal fails to receive the same regularly and promptly, they will confer a favor by informing us at once.

ANNUAL REPORT
—OF THE—
Pacific Insurance Company.

IN COMPLIANCE WITH THE ACT OF THE LEGISLATURE of the State of California, entitled "An Act concerning Corporations," passed April 22, 1850, the Pacific Insurance Company of San Francisco makes the following Annual Report:

I.—The amount of the Capital Stock of this Company is SEVEN HUNDRED AND FIFTY THOUSAND DOLLARS, and paid in GOLD.....$750,000

II.—The amount of the Assets is ONE MILLION AND FIFTY-ONE THOUSAND, FOUR HUNDRED AND TWENTY DOLLARS AND THIRTY-SEVEN CENTS..$1,051,420 37

III.—The Company has NO DEBTS

IV.—The amount of Insurance effected during the year, and which remained in force December 31, 1865:

Fire.....$12,973,949
Marine.....481,408

This Company commenced underwriting Marine Risks, August 1, 1865.

V.—This Company insures against the following risks, viz.: BUILDINGS, HOUSEHOLD FURNITURE, MERCHANDISE, RENTS, LEASEHOLDS, VESSELS IN PORT AND THEIR CARGOES, and other PERSONAL PROPERTY, AGAINST LOSS OR DAMAGE BY FIRE.

Also, on CARGOES, TREASURE, COMMISSIONS, PROFITS, and WAR RISKS, and ON ALL MARINE AND INLAND NAVIGATION RISKS, TO AND FROM ALL PORTS IN THE WORLD.

VI.—This Company will take on any FIRST-CLASS RISK not to exceed $75,000 (the limit fixed by law), and on all large risks will reinsure to an extent consistent with PRUDENCE in other RESPONSIBLE COMPANIES.

Machinery.

HUNTER'S
PREMIUM
CONCENTRATOR, AMALGAMATOR
AND SEPARATOR,

Awarded a Silver Medal at the late Mechanics' Fair.

HUNTER'S CONCENTRATOR CAN BE SEEN IN OPERation daily at the Novelty Iron Works, Fremont street. Parties wishing to purchase Concentrators will find it to their advantage to examine the above machine before purchasing elsewhere, for the following reasons:

1st. It will work the sands from a 5-stamp battery, and save from 10 to 20 per cent. more sulphurets than any machine built on the Pacific coast.

2d. The Sulphurets are washed clean, containing less than ten per cent. of sand.

3d. The waste free gold and amalgam is amalgamated on the copper plates; no trace of ground mercury and scarcely a trace of metal passes off with the sand.

4th. Its simplicity is a sufficient recommendation for its general use as a Concentrator. The variation of speed in a Quartz Mill does not effect the working of the Machine. The same was demonstrated at the late Mechanics' Fair, when with the greatest IRREGULARITY OF SPEED the best of results were given.

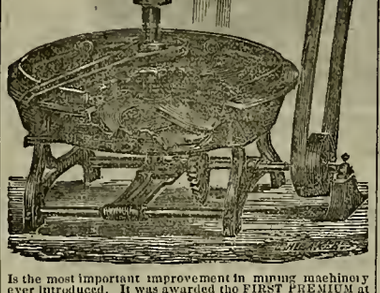
5th. There is no clogging or stopping to clean out the sulphurets and sand; consequently no waste from any inattention on the part of the attendant.

6th. In exhibiting the working of the machine it is not run empty; all classes of ores and tailings, from 50 pounds and upwards, are concentrated that parties may see fit to test the machine with.

Give it a trial, and satisfaction is guaranteed. All orders and any information required, address

ANDREW HUNTER,
Novelty Iron Works, Fremont st., San Francisco,
15v11-3m Or to E. T. STEEN, Agent.

BAUX & GUIOD S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; its small cost; its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jeffersonian Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Grull's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8-6df

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of
Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
—AND—
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc. ☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.
☞ For further Particulars see small circulars. ☜

Portable Steam Engines!
"Hoadley's" and "Hittinger's" Make,

COMBINING THE MAXIMUM OF EFFICIENCY, Durability, and Economy, with the Minimum of weight and Price.

These Engines are favorably known, a large number being in use on this coast for hoisting, pumping, threshing, milling and mining purposes.

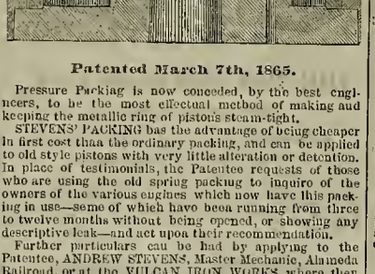
Steam can be got up on these Engines in fifteen minutes after reaching the place of operation, and the time, expense of setting boilers, machinery, and "construction account" saved, (which is often the difference between the successful and unsuccessful prosecution of milling enterprises,) in fact, the portable principle is the pioneer's friend, and enables him to draw engines on their own wheels to his cabin door, and plant on the outermost confines of civilization the saw and grist mill, and it has done and will do more to help subdue the continent than any other of the modern motors which are crowding society and normalizing the world.

All sizes on hand from 3 to 30 horse power, with and without carriages.

Also, Portable Saw and Grist Mills.

For sale by TREADWELL & CO.,
3v12-3m Corner of Front and Market streets.

Stevens' Pressure Packing.



Patented March 7th, 1865.

Pressure Packing is now conceded, by the best engineers, to be the most effectual method of making and keeping the metallic ring of pistons steam-tight.

STEVENS' PACKING has the advantage of being cheaper in first cost than the ordinary packing, and can be applied to old style pistons with very little alteration or detention. In place of testimonials, the Patentee requests of those who are using the old spring packing to inquire of the owners of the various engines which now have this packing in use—some of which have been running from three to twelve months without being opened, or showing any descriptive leak—and act upon their recommendation.

Further particulars can be had by applying to the Patentee, ANDREW STEVENS, Master Mechanic, Alameda Railroad, or at the VULCAN IRON WORKS, where they can be seen, at any time, in course of construction.

10df ANDREW STEVENS.

FOR SALE!
A STEAM ENGINE!

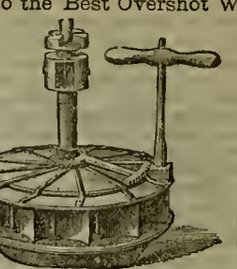
18-INCH CYLINDER, FOUR-FOOT STROKE, IN PERfect Order. Can be seen running at the San Francisco Pioneer Woolen Factory, Black Point. Inquire at VULCAN IRON WORKS, 137 and 139 First street, or to

HEYNEMANN & CO.,
26v11tf 311 and 313 California street.

WATER WHEELS!

Equal to the Best Overshot Wheel

POWER PLEDGED



IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE

Is now manufactured by the Vulcan Iron Works Company, in this city, and orders for the same can be filled immediately. We have a large supply of the different sizes, from 10 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds, will yield from 10 to 30 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
At Vulcan Iron Works, office 137 and 139 First street, San Francisco. 4v11tf

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Settlers made on the same principle excel all others. They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and settlers for themselves, at the PACIFIC FOUNDRY,
1v1 San Francisco.

Prater's Patent Concentrator

(Known as HUNCERFORD & PRATER'S Concentrator,)
MANUFACTURED AT THE
San Francisco Foundry and Steam Engine Works.

Corner Fremont and Mission Streets.

All orders promptly attended to.

2v12 DEVOE, DINSMORE & CO.

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 28 Second street, San Francisco.

Important to Miners.
NEW PATENT ROASTING PROCESS.

I AM NOW PREPARED TO OFFER TO THE MINING community a New Roasting Process, which has been approved as novel and beneficial by the best authorities in Europe. A Furnace can be erected in a few days at a trifling expense, and one man is able to Roast ten tons of Ore or Concentrated Sulphurets per day.

MORE COMPLETELY AND CHEAPER

Than any other Process. All the Sulphur is saved, being converted into Bisulphide of Carbon, which is a valuable product, and will pay nearly all expenses.

For particulars, apply to

J. MOSHEIMER,
26v11-3m 423 Washington street.

SALMON'S
PROPELLOR AMALGAMATOR
—AND—
Challenge Settler

Has been in use and thoroughly tested, both in California and Nevada, with entire satisfaction to all parties concerned. These Machines are

Made entirely different from any others,

And with the same power will grind, amalgamate, settle and separate, more gold and silver ore than any others now in use. Manufactured at the SAN FRANCISCO FOUNDRY, where Machines can be seen in operation. Address

3v11 J. & W. C. SALMON.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character readers it the proper journal for the concentration of mining patronage.

COLLEGE OF CALIFORNIA.—From the Annual Catalogue of this important and flourishing institution of our neighboring city, Oakland, we glean the following information :

During the last year the college had 243 students. The Senior class embraces 4 ; the Junior class, 3 ; the Sophomore class, 6 ; the Freshman class, 12. The balance of the scholars are in the Primary Department. The academic year for 1866, commenced on the 18th ult. The examinations occur May 31st, and June 1st and 4th.

The following gentlemen compose the Faculty in the higher branches of study, viz. : Vice President, Rev. Samuel H. Willey, M. A.; Rev. Henry Durant, M. A., Professor of the Greek language and Literature ; Rev. Martin Kellogg, M. A., Professor of the Latin language and Literature ; Rev. Isaac H. Brayton, M. A., Professor of Rhetoric, Belles-Lettres, and the English langnage ; Rev. Francis D. Hodgson, M. A., Instructor in Mathematics and in Natural Philosophy ; Wm. P. Gibbons, M. D., Lecturer in Physiology ; Chas. L. Des Rochers, Teacher in French ; S. S. Sanborn, M. A., Teacher in German.

Faculty of the Academic Department : Rev. Isaac H. Brayton, A. M., Principal, Mental Philosophy, Rhetoric and History ; Henry Carver, A. M., Associate Principal and Professor of Surveying and Civil Engineering ; Frederick M. Campbell, Assistant Principal, and Instructor in Natural Philosophy, Bookkeeping, etc.; Rev. Francis D. Hodgson, A. M., Instructor in Natural Science and Higher Mathematics ; S. S. Sanborn, A. B., the Latin, Greek and German languages ; William C Dodge, Mathematics and English branches ; Paul Garin, French and Spanish languages ; J. M. Sibley, A. M., Principal of the Primary Department ; Chas. L. Des Rochers, Drawing and Painting : Mr. and Mrs. E. B. Higgins, Vocal and Instrumental Music ; Frank M. Dodge, Teacher of Penmanship ; Morris. S Campbell, Stationer and Accountant.

Wm. P. Blake, M. A., has been appointed Director for the "Department of Mining and Agricultural College," and Professor of Mineralogy, Geology and Mining ; and Sherman Day, M. A., Professor of Mine Construction and Surveying.

PRODUCT OF THE NORTHERN PACIFIC GOLD FIELDS.—The Dalles *Mountaineer* gives the following table of the estimated annual product of gold and silver on the Columbia and its tributaries, for 1865 :

John Day mines	$1,500,000
Warren's Diggings	750,000
Elk City	250,000
Florence	200,000
Clearwater Station	200,000
Oro Fino	600,000
Bars of Salmon, Snake and Clearwater	300,000
Clark's Creek and M. Basin	150,000
Colville, Pen d'Oreille, and Kooteuai	1,000,000
The Montana Trade	1,000,000
Auburn	500,000
Total	$6,450,000.

The mines of southern Idaho are not included in the list.

GOOD INDICATIONS.—As an evidence of increasing interest in mining matters, we can say that our file of valuable communications from all parts of this State and Nevada is more replete than ever before. When prospects are bright, the spirit moves, and people feel like writing.

SPRING ATTIRE.—Since the late heavy rains, the foot-hills, and so much of the plains as are not flooded with water, have been putting on the green livery of spring, and "the face of all nature looks gay."

THE TRINITY JOURNAL has entered upon its eleventh volume, and we are pleased to learn that it is in a prosperous condition. It has ever been a useful paper.

SOME, if not all of the San Francisco foundries, are manufacturing an unusual amount of stock work this winter, in anticipation of a lively mining season.

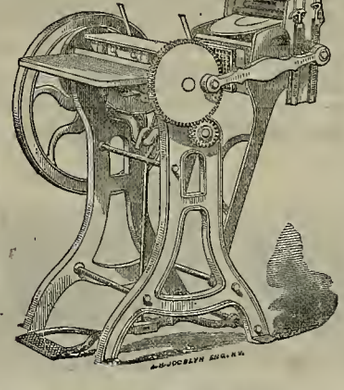
JOB PRINTING
—FOR—
THE PEOPLE!

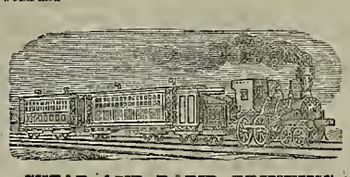
Mining and Scientific Press



JOB PRINTING OFFICE,
505 Clay Street,
(Southwest corner of Sansome street, on 2d floor,)

Formerly WATERS BROS. & CO.'S.

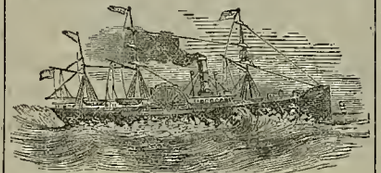
We are now prepared to offer customers the most favorable inducements to patronize our Book and Job Printing Establishment. Our office is supplied with an EXTENSIVE assortment of Type, and the BEST style of Presses for GOOD WORK and



CHEAP AND RAPID PRINTING.

Patrons will always find us well up to the times, ready to execute superior work, and furnish the same as cheap as any prompt and reliable firm in San Francisco.

Our aim is to SUIT OUR CUSTOMERS in regard to style and prices, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.

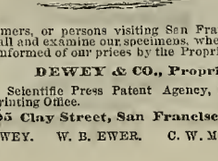


We give especial attention, when desired, in assisting parties in making up or revising their copy. Particular care will always be given to the publication of

LAW BRIEFS,
CERTIFICATES OF STOCK,
MISCELLANEOUS BLANKS,
BLANK BOOKS,
MINING BLANKS,

BOOKS,
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages can be forwarded by mail at small expense.



City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

Pacific Mail Steamship Co.

The following Steamships will be dispatched on the following named days.

February 10th—GOLDEN AGE.....Capt. E. L. Farnsworth, Connecting with ATLANTIC, Capt. Maury.

February 19th—GOLDEN CITY.....Capt. F. R. Baby, Connecting with NEW YORK, Capt. Horner.

February 28th—COLORADO.....Capt. Jas. T. Watkins. Connecting with HENRY CHAUNCEY, Capt. Gray.

From Folsom street Wharf
At 11 o'clock A. M., punctually to the hour,
For Panama.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York in the splendid steamships of the PACIFIC MAIL STEAMSHIP COMPANY.

Steamers of this line will be dispatched the 10th, 19th and 28th of each month. When these dates fall on Sunday, the steamer will leave on Saturday preceding.

Steamer leaving San Francisco on the 10th touches at Manzanillo. All touch at Acapulco.

Departure of 19th connects with French Trans-Atlantic Co.'s steamer for St. Nazaire, and English steamer for South America.

Departure of 10th connects with English steamer for Southampton, and steamer running to Guayaquil, touching at Tumaco, the port of the new mines, and P. R. R. Co.'s steamer for Central America.

Cabin passengers will be berthed through. Baggage checked through—100 pounds allowed each adult.

An experienced Surgeon on board. Medicine and attendance free.

These steamers will positively sail at 11 o'clock. Passengers are requested to have their baggage on board before 10 o'clock.

For merchandise freight apply to Wells, Fargo & Co.

For passage and all other information, apply at the Pacific Mail Steamship Co's office, corner of Sacramento and Leidesdorff streets.

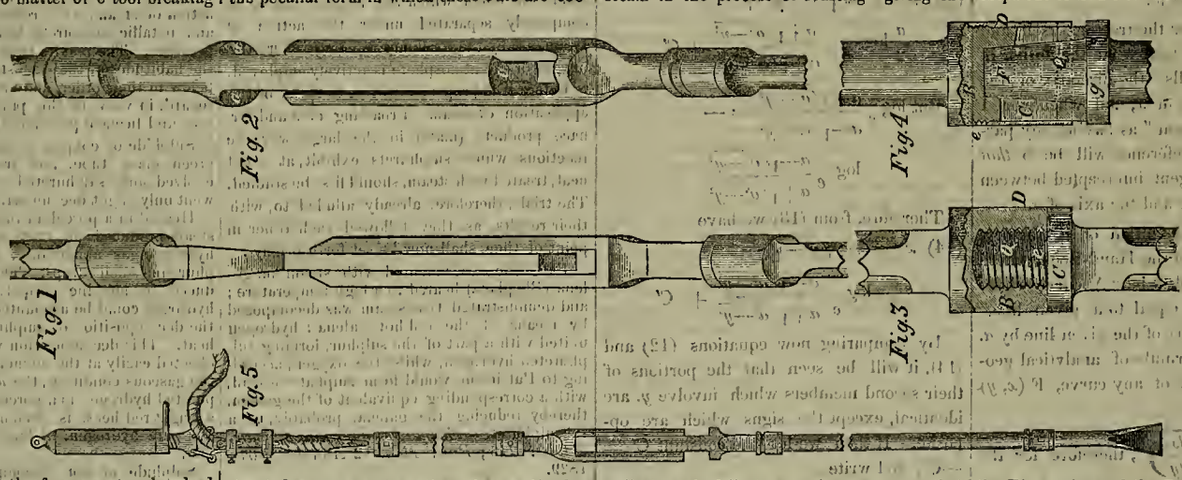
WILSON & ATKINSON'S IMPROVED BORING TOOLS FOR ARTESIAN WELLS.

It has been a *desideratum* long sought for, by parties engaged in the artesian well boring, to obtain such tools as *would not break in the well*, as the mere matter of a tool breaking off, even at the depth of one or two hundred feet, often delays the work a month, or even longer, and oftentimes the well has to be abandoned altogether, on account of the inability of the workmen to extract the detached part remaining in the well.



The parts found by experience to be most liable to break, are the parts technically known as the "jar" and "pin," and "box," or "joint."

The present form of "pin and box," as shown in fig. 3, is merely a pin, Q, screwed into a socket or box, B, as it is termed. In order to prevent this from unscrewing in the well, the collar, C, has to be screwed hard or "jammed" against the socket at D with such force as to almost separate the fibers of the iron of the pin at *e*, and the result is, as soon as the tools are placed in the well, the temperature of which is very low, and the jarring motion produced, the pin sooner or later breaks.

The design of this "pin and box" is to obviate this difficulty, by preventing all undue strain on the working parts. The pin, Q, fig. 4, is turned a little tapering without any thread, and is ground to a nice fit in the box, B; C is a steel key having sufficient taper to bring the pin and box firmly together and no more; D is a sleeve with a thread at *e*, and having key-ways or slots at F, and is so constructed that when the sleeve is screwed within half a turn of the collar, g, the key-ways or slots are in line with the key-ways in the pin and box, and the key may be driven home.

To put the pin and box together the operation is as follows:—Unscrew the sleeve to within a half a turn of the collar opposite the screwed end of the sleeve, and the slots in the sleeve will be in line with the key-ways in the pin and box, as described. Insert the key and drive it home, then screw the sleeve hard against the collar at the screwed end of the sleeve and jam it. Now before the key can become detached from the "pin and box," the sleeve will have to become loose from the collar where it has been jammed, make six turns and get precisely in line with the key, and then wait for it to come out.

The principle of this "Jar" is the same as those now in use; but the construction is different. What is claimed in this invention is the peculiar form in which these Jars are constructed, so as to strengthen the weak parts and so increase the surface at the points, *a*, *a*, *a*, fig. 2, that the second blow may be struck without any injury to the Jar, by which means a well may be sunk in one-third less time than with the ordinary Jar. A glance at figs. 1 and 2 is sufficient explanation.

These tools are made of the very best ingotted wrought iron, and great pains are taken in their construction, and the reasonable inference that they are proof against any accident by breaking off in the well will render them invaluable to parties engaged in artesian well boring.

The demand for tools of this description in California, is rapidly on the increase, and the advantages of securing such as shall be most serviceable, and least liable to cause delay and cost by breakage, is a matter of the utmost importance. In addition to artesian and oil well boring, the search for coal will also soon create quite an additional demand for them; and we do not see why they may not also be economically employed in boring into gravel diggings for blasting purposes, especially where nitro-glycerine or gun cotton is used, which requires a space quite small in comparison to that required in the use of powder.

Manufacturers of tools for artesian boring, either for oil, water, or mining purposes, will find it worth their while to examine an advertisement for the sale of the patent-right of the above described tools for California, which will be found in another column. For further information with regard to the same, address A. A. Wilson, Morgan Iron Works, foot of 9th street, E. R., New York City.

THE USE OF STEAM IN ROASTING ORES.—We commence in another column the publication of the chapter on the use of steam in roasting ores, from Plattner's Treatise on the Metallurgy of Roasting Ores—the only valuable work in this especial branch of metallurgy ever published. This work, valuable as it is to the miner and metallurgist, has never yet been translated into the English language. The present chapter will be concluded in our next issue. We have selected this, at the present time, from the fact that it treats particularly upon the use of steam in the process of roasting—giving the earliest and fullest experiments upon that mode of roasting ores. From a perusal of this translation, the reader will perceive how little that is now being written and done in this direction is really new. We commend it to the careful perusal of our readers, and shall take a future occasion to make a more full allusion to it. We are indebted for its translation to G. W. Baker, Esq.

ARTESIAN WELLS IN VISALIA.—The Visalia *Delta* says that a project is on foot to test the practicability of Artesian wells in the valley about Visalia. A number of public spirited individuals largely interested in the development of the resources of that county, will, during the coming summer engage in boring such a well at some favorable point on the plains. The object of seeking Artesian water is for purposes of irrigation. There are tens of thousands of acres of as rich land as the sun shines upon, suitable for beautiful homesteads, scattered all over the valley, and only waiting the life giving element to render them Edens of verdure and beauty. The experiment is a most important one.

REMOVAL.—The Tear and Rip Copper Mining Company have removed its office, from Cosumnes Grove Hotel, El Dorado county, to San Francisco.

OIL ITEMS.—We have received no very late intelligence from the oil region. We clip the following from the Mattole correspondent of the Humboldt *Times*: "Well No. 3, at the McNutt Gulch, is being put down and shows very fine indications. They intend pumping this so soon as they have tested No. 1, and if energy and perseverance will bring success, Col. Allen, the superintendent, is bound to have it. There are about seventeen wells being put down now, the balance of them having suspended—some on account of the inclemency of the weather, and others for the purpose of getting power. Among those I have visited is the Irwin Davis—down three hundred and ten feet, prospects good; the Noble—taking out oil with the sand pump and preparing to perforate the pipe; the Brown & Co., Union Mettole Co., Buckeye Co., Sacramento Co., all have their drills going; may success attend them—they deserve it.

Los Angeles Oil.—The *News* says twelve barrels of petroleum passed through that city on the 28th ult., *en route* for San Pedro, for shipment to San Francisco. The oil was from the Pico springs of the San Fernando district in Los Angeles county.

Colusa Petroleum.—We understand that the Burr oil well, Antelope Valley, Colusa county, at a depth of over 200 feet, have obtained an intermittent flow of excellent oil. The flow occurs every hour or so; producing some five or six gallons at a time. There are eight wells in the county, most of them already having more or less oil, and every one said to show flattering prospects.

THE DIAMOND EXCITEMENT in Owyhee, has very much subsided; but is far from being "played out." The *Avalanche* says that some of the diamond hunters, learning that a pure diamond, when rubbed on a woolen cloth, would become sufficiently electrized to lift a hair, made the experiment on several crystals, supposed to be diamonds, and in most cases it succeeded; many of the crystals lifting the hair, lodestone-like, with ease.

CORN IN LOS ANGELES COUNTY.—A single township in Los Angeles county last year, produced eight-five thousand bushels of corn, which sold at forty cents per bushel. There is probably no part of the world more favorable for the production of corn than Los Angeles county. In many places roasting ears may be obtained every month in the year.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

THE TRACTORY CURVE, AND THE PROPERTIES OF GRINDING PLATES.

Editors Mining and Scientific Press:—My attention has been especially directed for the first time, within the last few days, to the discussion of tractory conoidal and other grinding plates, contained in Wheeler & Randall's Quartz Operator's Hand Book, and which appeared in the Mining and Scientific Press, last May. Certain portions of this discussion have struck me as being somewhat peculiar in character, and as more than justifying the modest claim to originality therein, which is involved in the preface of the book.

I am sorry to appear in public to depreciate the work of any man, but when, in a case like this, fallacies are presented as mathematical demonstrations, it is but just to the public, who are interested, that they should be informed of the fact.

I therefore submit the following discussion of the same subjects, and in so doing, I do *not* claim any particular "originality;" for the tractory curve itself is not a peculiarly difficult one to treat, and it is not likely that either it or the properties of grinding plates have remained until this late day undiscussed by able mathematicians other than D'Alembert. I will add, however, that I have never *seen* a discussion of this curve other than that contained in the book referred to.

I will first discuss the tractory itself, and in doing so, I shall take what the author of the Hand-Book calls "the directrix of the curve," as the axis of x, and whenever I speak of the "tangent" as having any particular *value*, the reference will be to *that portion* of the tangent intercepted between the point of contact and the axis of x.

I will take the definition of a tractory, given on page 93 of the Hand-Book, where a tractory is defined to be "A curve whose tangent is always equal to a given line." Represent the length of the given line by a. By the ordinary formula of analytical geometry, the tangent of any curve, $F(x, y) = 0$, is equal to

(1) $y\sqrt{1+\left(\frac{dx}{dy}\right)^2}$, therefore for the tractory:

(2) $y\sqrt{1+\left(\frac{dx}{dy}\right)^2} = a$. Hence,

(3) $\frac{dx}{dy} = \pm\frac{\sqrt{a^2-y^2}}{y}$. The numerator of the fraction in (3) is equal to the *subtangent*, whose general value is $y\frac{dx}{dy}$.

In equation (3) we have two cases, viz.:

$\frac{dx}{dy} = +\frac{\sqrt{a^2-y^2}}{y}$, and $\frac{dx}{dy} = -\frac{\sqrt{a^2-y^2}}{y}$.

Let us consider these two cases separately:

Case 1st.

Take $\frac{dx}{dy} = +\frac{\sqrt{a^2-y^2}}{y}$. This equation is not in a convenient form to integrate, therefore, we put

(4) $\sqrt{a^2-y^2} = z$, from which

(5) $y = \sqrt{a^2-z^2}$, and

(6) $\frac{dy}{dz} = -\frac{z}{\sqrt{a^2-z^2}}$. But

(7) $\frac{dx}{dz} = \frac{dx}{dy}\times\frac{dy}{dz}$. Substituting now in (7) the values of $\frac{dx}{dy}$ and $\frac{dy}{dz}$ in terms of z, we have

(8) $\frac{dx}{dz} = -\frac{z^2}{a^2-z^2} = 1 - \frac{a^2}{a^2-z^2}$.

Decomposing the term $\frac{a^2}{a^2-z^2}$, this gives us

(9) $\frac{dx}{dz} = 1 - \frac{a}{2(a-z)} - \frac{a}{2(a+z)}$,

Integrating (9), we obtain

(10) $x = z + \frac{a}{2}\log_e(a-z) - \frac{a}{2}\log_e(a+z) + C$, or

(11) $x = z + \frac{a}{2}\log_e\frac{a-z}{a+z} + C$.

Restoring now the value of z, we have

(12) $x = \sqrt{a^2-y^2} + \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}} + C$.

Case 2d.

If $\frac{dx}{dy} = -\frac{\sqrt{a^2-y^2}}{y}$, put as before $\sqrt{a^2-y^2} = z$, therefore $y = \sqrt{a^2-z^2}$, and $\frac{dy}{dz} = -\frac{z}{\sqrt{a^2-z^2}}$. Hence, $\frac{dx}{dz} = \frac{z^2}{a^2-z^2} = -1 + \frac{a^2}{a^2-z^2} = -1 + \frac{a}{2(a+z)} + \frac{a}{2(a-z)}$.

Integrating, $x = -z + \frac{a}{2}\log_e(a+z) - \frac{a}{2}\log_e(a-z) + C$, or $x = -z + \frac{a}{2}\log_e\frac{a+z}{a-z} + C'$, from which, restoring value of z, we get

(13) $x = -\sqrt{a^2-y^2} + \frac{a}{2}\log_e\frac{a+\sqrt{a^2-y^2}}{a-\sqrt{a^2-y^2}} + C'$

But $\log_e\frac{a+\sqrt{a^2-y^2}}{a-\sqrt{a^2-y^2}} = -\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}}$

Therefore, from (13) we have

(14) $x = -\sqrt{a^2-y^2} - \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}} + C'$

By comparing now equations (12) and (14), it will be seen that the portions of their second members which involve y, are identical, except the signs which are opposite. If then we let the constant $C' = -C$, and write

(15) $x = \pm\left(\sqrt{a^2-y^2} + \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}} + C\right)$

we have an equation which includes both the two cases above considered, and is, therefore, the *general* equation of the tractory when the axis of x is the directrix.

It is evident that y cannot be numerically greater than a, for if so, x is impossible. Equation (15) shows that for every possible value of y there are two numerically equal values of x with contrary signs. For every value of x, there are also two numerically equal values of y with contrary signs. The curve is, therefore, symmetrical with respect to both the axes of x and y.

Since, when $y = a$, $x = \pm C$, the constant C represents the numerical value of the abscissa of the point whose ordinate is a. This constant being arbitrary, I shall now put it $= 0$, the effect of which is simply so to place the curve, that the point whose ordinate is a shall lie in the axis of y. Equations (12), (14), and (15), then become respectively

(16) $x = \sqrt{a^2-y^2} + \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}}$

(17) $x = -\sqrt{a^2-y^2} - \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}}$ and

(18) $x = \pm\left(\sqrt{a^2-y^2} + \frac{a}{2}\log_e\frac{a-\sqrt{a^2-y^2}}{a+\sqrt{a^2-y^2}}\right)$

When $y = \pm a$, $x = 0$, also $\frac{dy}{dx} = \infty$

There are now, therefore, two cusps, one at the point $y = a$, $x = 0$, and the other at the point $y = -a$, $x = 0$, and at both points the tangent coincides with the axis of y.

[To be Continued.]

The Chemical Action of Steam on Metallic Sulphurets (Schwefelmettale) at a High Temperature.

[Translated for the Mining and Scientific Press from the German of Carl Fredrick Plattner, (Die Metallurgischen Rostprozesse, Freiburg, 1856.]

BY O. W. BAKER.

Many chemists and metallurgists have heretofore made experiments on the decomposition of metallic sulphurets in the small way (laboratory), when heated to a red hot heat, and submitted to a current of steam. The results attained excited the hope that the roasting of sulphurets, in practical working, for the elimination of the sulphur as completely as desired, would be accomplished in this way very simply and perfectly. But, unfortunately, up to the present time (1856) it has not been possible to make much use of that agent practically in roasting, since it is not easy to fulfill the conditions under which the sulphur can be as completely separated under the action of steam, as by the ordinary roasting, where the oxygen of the atmosphere is actively employed.

Before it is proper, however, to speak of the application of steam in roasting ores and furnace products (matt) in the large way, the reactions which sulphurets exhibit, at a red heat, treated with steam, should first be studied. The trials, therefore, already alluded to, with their results, as they followed each other in point of time, shall now be set forth briefly:

Pattinson experimented with steam on galena (Bleiglanz) heated to a high temperature; and demonstrated that steam was decomposed by means of the red-hot galena: hydrogen united with a part of the sulphur, forming sulphureted hydrogen, whilst the oxygen, according to Pattinson, would form sulphate of lead, with a corresponding equivalent of the galena, thereby reducing the galena, probably, to a subsulphuret.—*Erdman's Journal, Chemic. Bd. b. s.* 216; *Phil. Mag.* 12 *Annals, March* 1829.

Jordan's trials of the action of steam on galena, and galena mixed with coal, established that galena, treated at a high temperature with steam, was, with great difficulty, decomposed; sulphureted hydrogen and sulphurous acid gas being formed; some yellow oxide of lead was produced, and a part of the sulphuret of lead was carried off with the steam. When galena, mixed with fine coal was treated with steam, on the contrary, a slow decomposition took place; sulphureted hydrogen was abundantly evolved, and but little sulphurous acid gas, whilst there would be found, a sublimate in the shape of blue colored, feathery crystals, composed of very delicate cubes, and also small globules of lead in the undecomposed galena.—*Erdman's Journal, Bd.* xi. *s.* 348.

Regnault made experiments with steam on metals, metallic sulphurets, etc., heated to a high temperature. In the opening of his excellent memoir, this author speaks of the chemical reactions when steam is decomposed by sulphurets, as follows:

"The hydrogen of steam in the presence of a simple metallic sulphuret will form, with the sulphur, sulphureted hydrogen, and its oxygen will exercise an affinity for the metal, provided the metal retains such an affinity at the temperature to which the experiment is carried. The oxide formed will again react on the undecomposed sulphuret, sending forth a new portion of sulphurous acid, and liberating the metal."

"When, however, sulphurous acid and sulphureted hydrogen are intermingled at a high temperature, they mutually react on each other, forming on the one side water, on the other sulphur. Hence, the definite results of the experiment are, metal, sulphur, and a portion of undecomposed sulphureted hydrogen, if the metal has not the property of decomposing water. In this last case, the oxide which is formed when metal is heated in the presence of steam, will remain behind. In this respect steam might be considered a very powerful desulphurizing agent, if the sulphurets were decomposed under its influence with a reliable energy, from the fact that the desulphurization would in many cases be carried on by both elements of water—oxygen and hydrogen."

"The reactions are different if the sulphuret is mixed with coal. A part of the steam is decomposed by the carbon forming carbonic oxide, which has no influence on the mineral, and hydrogen, which, as H. Rose asserts, tears away a portion of the sulphur; but this last proceeds with much difficulty and much slower than it would through the agency of oxygen. The excess of undecomposed steam will react on the sulphur forming sulphureted hydrogen; but in the presence of the coal no further oxidation will ensue. Consequently, in the process of reduction no sulphur will be separated, and the desulphurization under such conditions will be hindered. The admixture of coal, therefore, cannot be made serviceable in a process of desulphurizing with steam, if steam is not efficient by itself; and, in fact, it will be found advantageous only for the reduction of the metal when it has been oxidized after the thorough removal of the sulphur."

"Should the atmosphere and steam, intermingled, be allowed to flow over highly heated sulphurets, it will be shown that neither exerts any influence on the other, both acting independently. The air will effect the roasting, as ordinarily, by means of the oxygen which it contains, whilst the steam at the same time will be effective, as heretofore stated."

"In this case, also, sulphurous acid and sulphureted hydrogen, will form, and reciprocally decompose one another, evolving water and sulphur, but permitting a definite portion of surplus gas to remain undecomposed. The metal obtains what is required to transform it to an oxide."—*Erdman's Journal, Bd.* X. S. 129.

Regnault extended his investigations on the action of steam, with regard to many metals and metallic sulphurets, heated to a high temperature. The results thus obtained showing the habitudes of these substances, are set forth below in their order, and are worthy of especial regard, in view of the practical treatment of ores and furnace products (matt).

Sulphide of copper, heated to redness in a green glass tube, and treated with steam, evolved some sulphureted hydrogen, but underwent only slight decomposition.

Heated in a porcelain tube to a white heat, steam produced an energetic action, forming hydrogen gas abundantly, and liberating sulphur in small drops. The sulphide was reduced to metallic copper. The evolution of hydrogen could be accounted for, only through the decomposition of sulphureted hydrogen by heat. This decomposition was most probably effected easily at the moment it was assuming the gaseous condition, the *nascent state*. (Sulphureted hydrogen in a porcelain tube heated to a bright red heat, is decomposed into sulphur and pure hydrogen. Cluzel, Ann. Chim. 84, 166.)

Sulphide of iron decomposes steam with much greater energy than sulphide of copper. When the trial is conducted in a glass tube, a large quantity of hydrogen is disengaged, and magnetic oxide is formed. A mixture of hydrogen and sulphureted hydrogen is evolved; the former doubtless arises, in this experiment, from the decomposition of the water, which is formed in the first period of the reaction, by the ferrous oxide.

Sulphide of zinc (blende, or native sulphide of zinc), heated in a glass tube, under a current of steam, forms a small quantity of sulphureted hydrogen, but is otherwise very slightly changed. Heated to a more intense heat in a porcelain tube, the decomposition is effected more speedily, causing a condensation in the forward part of the tube of small, silky tufts of the oxide of zinc, almost completely freeing the blende of sulphur.

Sulphide of lead (galena), heated under a current of steam in a glass tube, suffered at a dark red heat scarcely any decomposition. At a stronger heat sulphureted hydrogen was evolved, and the water in the tub (through which the gases were conducted and condensed), became milky. There was formed on the surface of the partially melted galena, a thin pellicle of melted lead. The fore part of the tube was bedizened over with small shining cubical crystals of galena, which had volatalized and were carried forward by the current of steam. The hydrogen of the steam, uniting with the sulphur, formed sulphureted hydrogen, whilst its oxygen combined with the lead. The oxide of lead reacts in the same measure as it is formed on the yet undecomposed mass of sulphide, forming metallic lead and disengaging sulphurous acid:

This last in its turn necessarily reacts on the sulphuretted hydrogen, occasioning the precipitation of the sulphur, and thus produced the milky appearance in the contents of the tub.

Sulphide of quicksilver (cinnabar), volatalizes when submitted to a current of steam, and is decomposed with considerable energy. Much sulphuretted hydrogens set free, and the volatalized matter becomes black, containing, intermingled through it, small globules of mercury. The products are also analagous to those formed by the reactions of galena.

Sulphide of silver decomposes steam with almost the same energy, submitted to the same conditions, as galena. The disengagement of sulphuretted hydrogen was very notable, and at the termination of the experiment, the sulphide of silver being melted in the tube, was covered on its surface with metallic silver.

Sulphide of antimony, heated under a current of steam, evolves a dense formation of sulphuretted hydrogen, at the same time condensing in the receiver a large quantity of an orange yellow substance, resembling greatly the sulphide of antimony obtained in the wet way, but composed of sulphide of antimony and antimonious acid; in the tube around the edges of the melted sulphide, precisely the same substance was fumbriated.

Sulphide of antimony likewise decomposes steam with considerable energy; sulphuretted hydrogen is disengaged, and an oxy-sulphuret is formed, $SbO^3 + 2Sb_2S_3$ which volatalizes in the same measure as it is produced. Moreover, this oxy-sulphuret is formed only when the sulphide is in great excess, since, by itself it will decompose steam, at a bright red heat, and would in this way, probably, be entirely converted into an oxide—antimonious acid.

Sulphide of arsenic exhibits the same reaction as sulphide of antimony, decomposing steam readily at a bright red heat, forming also under the same conditions an oxy-sulphuret, but which, on account of being so readily volatalized, is always mixed with a large quantity of the sulphide in excess.

In view of the foregoing results, Regnault comes to the following conclusion: "What is arrived at by the employment of steam in metallurgical processes, in effecting the roasting of metallic sulphurets, etc., is sufficiently demonstrated by the foregoing trials: that in this regard nothing is to be hoped for. The air of the atmosphere is by far the most energetic desulphurizer, as may be premised, *a priori*, without much trouble."

The investigations made by Bischof, in his laboratory, for the benebt of science, as well as for the explication of the various habits of minerals, demonstrate that sulphide of lead and silver, exposed at a high heat to the influence of steam, suffered decomposition, disengaging, simaltaneously, sulphuretted hydrogen and sulphurous acid gas, and liberating the metal (mossy, wire-shaped silver branches).

In the year 1844 I had an opportunity to judge for myself, by experiments in the laboratory, that in the decomposition of metallic sulphurets, the sulphide of arsenic, and arsenical ores, was extraordinarily slow, when submitted to the action of steam, air being entirely excluded, and at a temperature such as would be employed in roasting pulverized ore and matt in a flame furnace; but when the air was admitted, very much quicker, yet not so perfectly as when acted on by the air alone. Experiments were made with ordinary pyrites, arsenical, cupreous pyrites, galena, blende, *Spieskobalt*, and other variously composed ores, such as were in part treated by lusion at the Freiburg works, and part intended for amalgamation.

In the trials with steam, excluding the air entirely, very refractory glass tubes were employed, the ends of which were bent downwards; whilst for roasting with steam, and a partial admission of air, and at the same time permitting the roasting to be controlled with its free admission, in the absence of steam, a porcelain tube was employed, two feet long, and two inches wide in the bore. The same quantity, 20 grain., of the substance to be operated on, finely palverized ore, etc., could be treated in each trial. The porcelain tube used for roasting with steam and the partial admission of air, was not laid exactly horizontal, but, was placed in a red-hot, furnace, inclined at the end, into which the current of steam was to be admitted. This end was also so loosely closed with a well-fitting stopper of slightly burnt clay, that air could enter around it, only in small quantity, while steam flowed in through a small glass tube. The other end was likewise closed with a stopper of burnt clay, having a glass tube passed through it, in such a manner that it could readily be opened for the introduction of ore, etc., from time to time, with a proper instrument.

The trials of metallic sulphurets with steam alone, employing as strong a heat as the glass tube would safely endure, developed the same results as those obtained by the experiments of Regnault; when air was partially admitted, the results attained were not more favorable than when the trials were conducted under the admission of air exclusively. The decomposition of sulphurets and arsenurets proceeded the slower as the quantity of air was diminished, and the process ceased almost entirely when only a moderately red heat was maintained.

(To be Continued.)

(Written for the Mining and Scientific Press.)

The Mines of Lower California.

Lower California presents an interesting field for geological study; there is a newness about its appearance that would seem to afford a key to its geological formation. Its elevation from the sea at a comparatively recent period is evident. Rocks of sedimentary series, granite, gneiss, and volcanic deposits, comprise almost the entire strata.

No country of the same extent affords a greater abundance and variety of minerals. Silver and gold abound from one to the other extremity of the peninsula. Rich placers of the latter metal do not exist, however, as the elements have not been long enough at work, and the water courses are not of sufficient extent to create large alluvial deposits.

EARLIEST SPANISH MINING.

Silver veins of unsurpassed richness and extent abound wherever primary formations occur. One Manuel Oseo, a discharged soldier appears to have been the first person to turn his attention to mining. The date appears somewhat uncertain; but there are people now alive who remember to have visited his haciendas at Tescalama and Santa Ana. Both his stamps and furnace blast were run by water power; the former was entirely swept away about eighty years ago by a flood caused by the heavy rains of an equinoctial storm; the ruins of the other hacienda are still standing.

Santa Ana was a mining town in 1769, when European astronomers selected that place to observe the transit of Venus. All traces of the mines in that vicinity worked by Oseo have been lost; there is no doubt but that he became very rich; it is believed, that in one year he paid, as the king's fifth, $36,000, the produce of his mines. He was murdered by his servants, who robbed him of what treasure they could find, stole his vessel, and embarked for San Blas, where they were apprehended and executed. It is supposed a large amount of silver and gold bars which he had buried escaped their search. Twenty-five years after his death his son arrived from old Spain to recover his property, but found the haciendas in ruins, his numerous ranchos deserted, and the cattle roaming wild.

It was many years after Oseo's death before work was resumed on the mines he had opened. The location of one, "*Mina Rica de Oseo*," still remains a mystery. The mine named "*Mina Rica*," situated in San Antonio, which was made the object of speculation in San Francisco in the palmy days of "wild cat," is known to be a later and worthless discovery, now abandoned.

Most of the silver veins of Lower California are composed of very refractory sulphurets; notwithstanding this, the mines of San Antonio district seem to have been worked with considerable success, and many persons acquired considerable wealth by extracting the decomposed surface ores, which yielded only a portion of the silver by the patio amalgamation; as is proved by assay of the few banks of tailings that remained, most of which have been run into the creeks, and washed away by the yearly rains. Part of the town of San Antonio is built on a bed of tailings, that assay from $30 to $40 per ton. When no more *arogue* ore was to be found in the veins, such mines were abandoned.

LATER MEXICAN OPERATIONS.

In the year 1856 a company was formed in Mexico, and experts dispatched to this territory to examine and report upon the mines. The result was that seventeen mines were discovered, and a prorogue of five years granted to the explorers. The company have worked but two of these, and managed to keep possession of the balance, to the manifest injustice of the mining community, for nine years.

The plan adopted by the Mexican company was to ship their ores to Freibarg for reduction. This is done at an expense of about $50 per ton, exclusive of the cost of mining.

The Hamburg house of G. R. Muller & Co., of Mazatlan, make advances upon the ores. The confidence placed by that house in the assays of Mr. Flores, superintendent, have enabled the company to prosecute the work of their mines without calls; the ore being deposited at their agency at La Paz as fast as extracted from the mines. Mr. Flores was fortunate in selecting mines having large deposits of ores above the water-level; enabling him to work without expensive machinery. He employs only Mexican labor, at a low price, and pursues the most economical method of extracting the ores. The company have been very prosperous, receiving yearly dividends without any paid-up capital. Mr. F., who, besides his salary, receives a per centage of the profits, has secured a handsome competence for himself. Their success is abundant evidence that the veins are rich, and that mineral exists in abundance; besides, it is estimated that they have at least 4,000 tons of ore paying less than $50 per ton that would not bear the cost of transportation, still remaining at their dumps.

SAN FRANCISCO MINING OPERATIONS.

The Triunfo company's mines are on the same lode, and have even a greater abundance of equally rich ores than the Mexican company. They have a 10-stamp mill, and profess to reduce at a cost of less than twenty dollars per ton; yet they are going behind-hand, the company is in debt, and their entire property is hypothecated here. They had more reliable data to calculate results, than the Mexican company, who took the first risk, if there was any, that experienced and practical men could not foresee.

The trouble is, that San Francisco companies have not sought here an investment for capital. If they have been deceived, it is because they have not managed as prudent business men ought. They have sent here incompetent men, who have wasted money in works that are worthless; they have not provided means to develop the mines, but sent it forward in driblets, with directions to get out ores and send to San Francisco, with the hope of raising a breeze to fly their kites, instead of sending reliable and competent persons, who were able to estimate the cost necessary to be incurred to make their properties paying concerns, and investing the amount as fast as required to develop them. It is safe to estimate the support and salaries of superintendents at 25 per cent., and useless works at 25 per cent; more of the whole amount expended at mining in Lower California. In Nevada the ignorant could learn from the experienced, which has never been the case here. Unless something is soon done, the result will be a total loss of all the capital that has been invested by San Francisco people in this territory; it is useless for interested persons, ignorant of mining, to come here to examine their properties, for experience proves that they, of all persons, are the easiest humbugged. There are many valuable mining properties in this peninsula owned in San Francisco that are worth far more money than ever has been expended upon them. They would sell at a good price, either in the East or Europe; but not when represented by persons who have failed to work anything out of them. There appears but one feasible course, and that is for the various companies to join in the expense of sending a person of known experience and capacity to examine their properties, and point out the proper mode of development with an estimate of the cost.

The mode adopted by the Mexican company is not cited as the best or most advantageous method of working mines or developing their value, though confessed to be the most economical to secure at a small outlay profitable returns. But of this fact the San Francisco companies may rest assured, there are few, if any mines in Lower California containing ore of sufficient richness to pay the cost of working steam machinery to develop them, and resort to exporting their ores for returns, which always involves a loss of all mineral of less value than $50 per ton; and over $80 when exported to Europe, via San Francisco, as has already been the case with some companies.

It is well known that ores of less value than $50 not only constitute the bulk, but are above the average value of all large silver veins. Not only in Lower California, but elsewhere, where ores of this class are thrown away, dividends go with them sure.

What this country requires is competent and experienced miners, and the erection of extensive reduction works, with sufficient capacity to reduce the ores at reasonable expense. There are now sufficient mines to insure employment to a 100-stamp mill. Ores are allowed to be exported by special license of the Government, which expires when beneficiatory works are erected, the necessity of which is so well understood that important concessions could easily be obtained by parties undertaking to erect them. Such an investment would prove lucrative beyond a doubt. The mines here are as extensive and the ore as rich and abundant as in any other part of the world, the only thing that retards their prosperity is their refractory character. When this difficulty is overcome here, as it has been elsewhere, Lower California will rank second to no other mining country. The cost of transporting machinery from San Francisco to the vicinity of the mines does not exceed $30 per ton. This and other facilities must at no very distant day cause the mines of this peninsula to become favorite investments for mining operators.

Besides the San Antonio and Triunfo mining districts, there have been some very rich mines opened in the district of Cacachilla. These veins, although but a few miles distant from San Antonio, and in the continuation of the same range, yield ores of a different quality, and richer and much less refractory. The most famous mines in this district, are the El Tesoro and San Rafael; both are controlled by San Francisco companies, and unfortunately subjected to the same disastrous management.

GEOLOGICAL.

The geological character of the mining districts of San Antonio and Triunfo, is gneiss, passing into mica slate. That of Cucuchilla, granite intersected with elvan courses of red porphyry. The general course of the mountain ranges is southeast and northwest, and that of the veins from north to south, sometimes varying to a little east of north and west of south. Besides the two main veins of San Antonio and Triunfo, there are numerous other parallel lodes. The continuation of this metalliferous range is to be traced through several islands of the Gulf of California, San Jose, Santa Cruz, Catalan, and Carmen Island, the latter of which, besides its copper veins, which are highly auriferous and argentiferous, is celebrated for its well known and extensive *salinos*, which has been caused by the blocking up of an extensive *estero*, and the subsequent evaporation of the salt-water, which is constantly supplied by infiltration through the porous materials of which the embankment is composed. The mountain masses of this island appear to be composed of indurated sandstone; the others are granite, and besides argentiferous ores, contain some extensive veins of iron.

AVIADOR.

Mining in Montana.

A correspondent of the Virginia City *Enterprise*, writing from Helena City, Montana Territory, January 21st, 1866, says: This Territory has, without an exception, the largest scope of mineral land on the Eastern Slope of the Rocky Mountains, and in places it is very rich in gold placers, but although the country is extensive and very rich in places, and I am already out here with grub enough to last until May, yet I earnestly wish myself back in Virginia. A man, if he takes his chance out here and escapes being frozen or starved to death, has one chance in ten to get a good claim in the spring, and if he is a business man he has five chances in ten to make a fortune, and a big one too. But if he depends on manual labor he has got to work at from six to ten dollars per day for about seven months in the year, and the remaining five months hole up like a bear and eat up what he has earned during the seven laboring months. If he is lucky enough to make a new discovery he has his pile in three months.

Bannock City is the oldest mining town in the Territory, and is noted for quartz, there being several good lodes discovered at that place; but as yet there is no machinery on any of them except one water mill and a few arastras. Alder Creek is seventy-five miles east from Bannock; it is fourteen miles long and is very rich. On the way up it has four towns on it, viz: Junction, Nevada City, Virginia City and Sumait City. There is a great deal of money comes out of this creek. There are also several good quartz lodes being worked in this vicinity which generally pay well. One hundred and thirty miles north of Virginia City is Helena City, at the mouth of Last Chance Gulch, which is seven miles long and very rich. This is fifteen miles from the Missouri river. East of the river is Confederate Gulch, some eight or ten miles long, and as far as it has been tested is very rich. Northwest of Helena, forty miles, is the Black Foot River mines, some of which are extremely rich. McClellan Gulch is the richest in the Territory, but is only a short gulch of four or five miles in length. It is rumored that the Yellowstone and Big Hora rivers and the mountains they drain are also rich in placers, quartz lodes and gold mines. But the winters are perfectly frightful. Only think—we have already had ten days at a time this winter that mercury lay frozen solid in the mercurial tubes of the thermometers.

The prices of groceries here are extravagantly high; flour is from $25 to $35 per 100 pounds; bacon, 75 cents per pound; butter, $2 per pound; sugar, 60@80 cents per pound; potatoes, $25 per 100 pounds, and vegetables of all kinds in proportion; beef, 20 to 30 cents per pound.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

San Francisco, Saturday Morning, February 17th, 1866.

The Money Market is abundantly supplied with available capital, and we have rarely had occasion to note so great an accumulation of unemployed means seeking investment, as at this time. Bank rates rule at 1@1¼ ₱ cent per month; but there are borrowers who obtain accommodations, upon first-class collaterals, at 10 ₱ cent. per annum.

Receipts of treasure from domestic sources, since Saturday last, amounted to $850,000, making an aggregate of nearly two millions thus far during the current month.

Bullion continues in some request at full rates, and sales of gold bars have been made at 855@865. Silver is inquired for at about 1 per cent premium for average parcels.

Legal Tender Notes have evinced rather more activity, and some $130,000 were dealt in at the Board within a range of 72@73½c, closing at about 73c bid. Our latest telegraphic advices from the East quote gold in New York at 138½ on the 16th inst.

Transactions at the Board during the week have shown a buoyant market for nearly all leading Mining Shares, which have been well maintained, in view of the large sales and the late rise. The flattering condition of several claims is a subject of congratulation in stock circles, and not only add strength to the whole market, but inspires the hope that the future of these mines will be no less promising.

Gould & Curry, owing to recent developments, has materially improved this week; advancing from $815 to $1,090, receding to $1,060, rallying to $1,075, and selling yesterday at $1,120, buyer 30. At a depth of about 630 feet, and some 200 feet north of the Savage line, the south drift from the second station (D street shaft), penetrated a vein of good ore, a few days since, and it is said that the "indications continue good for a large body." The progress of explorations at this point, as well as in the drift from the fourth station (200 feet still deeper), will be watched with great interest. In the latter, promising indications have also been met with recently.

Savage has been steadily maintained, and is in better favor at the close; rising from $900 to $950, dropping to $897½, advancing to $970, then selling at $990@1,025, and closing yesterday afternoon at $1,030. This mine produced last month 3,200 tons of second-class ore, averaging $41.60 per ton, and 30 tons first-class, netting $170 per ton. The company now pay only $15 per ton for the reduction of second-class ores, and their aggregate shipments of bullion since the first of January have exceeded $210,000. The different levels of the mine are said to look better than at any time during the past six months, and the drift east from the prospecting winze (lower station) shows fine ore. A recent crushing of 25 tons first-class ore yielded the company $300 per ton net, and the second-class ores are also doing better this week.

Hale & Norcross fell from $950 to $860, seller 30, rose to $1,000, buyer 5, receded to $950, rose to $980, and then sold at $990@$985. Advices from this claim are still flattering. In breasting out to the north upon the body of ore found recently, it has widened out to some some 18 feet, and this contains a seam of rich ore three feet in width, which is being sacked for dry crushing. Four mills are now employed, and the last clean up from Todman's yielded $51.80 per ton. The average yield, thus far, of 301 tons, has been $44.48. The total indebtedness of the company at this time, both here and in Nevada, is less than $5,500, and the recent assessment will probably be rescinded.

Crown Point is in better request, steadily advancing from $810 to $905, and selling yesterday at $920@905. During the week ending February 10th, 466 tons of ore were extracted from the mine, nearly all of which came from the lower level. On the vein of the latter the drift has reached the north line. An incline is now under way from the level, and the main shaft is also being sunk for a new station. Receipts of bullion thus far this current month have amounted to $40,000, and it is thought that the company will be entirely out of debt on the 1st proximo.

Yellow Jacket has been active, and some 450 feet changed hands, receding from $405 to $320, advancing to $400, buyer 30, dropping to $360, rallying to $400, declining to $380, and selling yesterday at $385 @460. The total indebtedness of this company, on the 31st ult., amounted to $175,652.91. The mine produced last month 3,346 tons of ore, which yielded $111,794.13—an average of $33.40 per ton. The aggregate debt was reduced $15,880.13 in January, notwithstanding the disbursement of some $12,000 for timber now on hand. During the week ending February 5th, 489 tons of ore were extracted from the mine. Drifting still continues south from the new shaft, but the formation being hard, slow progress is made. Small seams of ore have been met with, and a cross drift will soon more thoroughly test the vein at that point. An assessment of $150 per foot (in gold) was levied on the 12th inst.

Ophir declined from $455 to $390, rose to $430, receded $415, and then sold at $430@$437½, closing at $445. During the first week of the month 106 tons of ore were sent to the Reduction Works, assaying $41 to $400 per ton, or an average of $164 per ton. Most of this ore was taken from the 4th and 5th stations of the South Mine. Receipts of bullion thus far, since 1st inst., amounted to $19,500.

Chollar-Potosi has attracted more attention, and some 350 feet were dealt in, steadily advancing from $272@$275 to $307½, buyer 5, then selling at $302½, and closing at $310. Work has been suspended on the Grass Roots station in order to raise up from below. In that part of the Potosi mine there is said to be some very rich ore, but it is mixed up with porphyry. The Bajazette ground does not look as well as it formerly did, and porphyry has made its appearance in raising up on the face of the slope. From the Second Station, 60 feet below the Potosi tunnel, some very good ore is now taken. During the week ending February 9th, 468¼ tons of ore were sent to the Custom Mills. Upon the new shaft and works but little progress has been made this month.

Alpha declined from $290 to $220, advanced to $290, receded to $245, rose to $260, and sold yesterday at $250@$260. Belcher has been dull and inactive, within a range of $146@$170, closing at $170.

Imperial fell from $116 to $108, seller 10, rose to $113, and sold yesterday at $115½. The reserve of ores on hand have been worked up, but it is thought that both mills can be kept running for some time yet upon ores remaining in the two lower levels. The old shaft has been sunk some 20 feet for a new level, and at 50 feet greater depth a drift will be started to reach the pay portion of the ledge. It will require about three months to accomplish this work. The New Monster shaft is also vigorously under way. The Presideat of this Company, Mr. L. W. Coe has tendered his resignation to the Board, in view of his early departure East. This gentleman has displayed considerable ability as an executive officer, and presided over the affairs of the Imperial Company for a long time with commendable efficiency and zeal. Mr. G. T. Lawton is to be his successor.

Bullion fell from $53 to $50, rose to $62½, declined to $58½, rallied to $60, and was dealt yesterday at $67. An assessment of $10 per share was levied February 10th. Overman fell from $51 to $36, rose to $48, and then sold at $43, closing at $48.

Home Insurance Company was sold at $101½@$100 per share, and is now offered at $100. Fireman's Fund is inquired for at 121 ($12.10 per share). Pacific Insurance can be sold at $164 per share. Union Insurance is held at $120 (80 per ct. paid), and the new National Insurance Co. was sold at 75½.

California State Bonds are held at 89, and San Francisco Co. 6's of '58, brought 71. Cal. Steam Navigation was dealt in at 56½@55 per cent., seller 3, closing at about 58 per cent. bid. Spring Valley Water is higher, and was sold at $59 per share, closing at $59¾ bid.

☞ Our advertisers are furnished with blank Assessment Sale notices free of charge. Orders from the interior promptly filled, by mail or express, as may be desired.

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of ALVA L. STILES, deceased. Order to show cause why order of sale of real estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by John M. Silles, the Administrator of the estate of Alva L. Stiles, deceased, praying for an order of sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts, expenses and charges of administration that have already accrued, and the debts, expenses and charges of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said Administrator to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Courts for said City and County, do hereby certify the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

THOS. B. BISHOP, Attorney. 2v12-4w

IN THE PROBATE COURT OF THE CITY AND COUNTY of San Francisco, State of California. In the matter of the Estate of SAMUEL L. DENNISON, deceased. Order to show cause why Order of Sale of Real Estate should not be made.

It appearing to the said Court, by the petition heretofore presented and filed by C. E. McNear and Patrick Scully, who are creditors of said Estate of Samuel L. Dennison, deceased, praying for an order of Sale of real estate, that it is necessary to sell the whole, or some portion of the real estate of said deceased, to pay the debts outstanding against said deceased, the debts, expenses, and charges of administration that have already accrued, and the debts, expenses, and charges, of administration that will or may accrue during the administration of said estate.

It is therefore ordered by the said Court, that all persons interested in the estate of said deceased, appear before the said Probate Court on WEDNESDAY, the fourteenth day of February, A. D. 1866, at eleven o'clock in the forenoon of said day, at the Court Room of said Probate Court, at the City Hall, in said City and County, then and there to show cause why an order should not be granted to the said petitioners, authorizing and requiring the Administratrix of said estate to sell so much of the real estate of the said deceased, as shall be necessary for the purposes abovementioned: And that a copy of this order be published at least four successive weeks in the Mining and Scientific Press, a newspaper printed and published in said City and County, and that a citation issue to Maria J. Dennison, the Administratrix of said estate, and be served upon her at least four weeks prior to the time above-mentioned for said hearing.

M. C. BLAKE, Probate Judge.

Dated January 11th, 1866.

Office of the County Clerk of the City and County of San Francisco—I, Wm. Loewy, County Clerk of the City and County of San Francisco, State of California, and ex-officio Clerk of the Probate Court in and for said City and County, do hereby certify the to the foregoing to be a true and correct copy of an order duly made and entered upon the minutes of said Probate Court.

Witness my hand, and the seal of said Probate Court, this eleventh day of January, A. D. 1866.

{ U. S. Int. Rev. Stamp, 5 cts, cancelled. [Seal.] } WM. LOEWY, Clerk.

By A. J. JEGHERS, Deputy Clerk.

PORTER & HOLLADAY, Attorneys for Petitioners. 2v12-4w

Mining Summary.

CALIFORNIA.

PLUMAS.—The Quincy *Union* of the 3d inst. says that the new smelting furnaces at Genesee Valley were fired up, for the first time, one day this week. A quantity of copper ore was smelted, and the furnaces worked to a charm. The company think they have got "the thing gaited," and we hope they have.

W. A. Bolinger has purchased the interest of J. A. Blood in the Crescent Quartz company, of Indian Valley. Mr. Blood owned 166 shares.

BUTTE.—The proprietor of the National Hotel, at Oroville, digging a well struck gravel at the depth of seven or eight feet, which has panned out half a dollar to the bucket.

SIERRA.—The *Messenger* says: "For the week ending Tuesday evening last, we had mild, rainy weather, and the disappearance of snow has been rapid in the extreme. Though usually at this season a warm rain is looked upon with disfavor, this last has, we hear, started water all over the county, with a prospect of a continuous and bounteous supply. We think the diggings all through this range were never in better condition, nor the harvest of gold more promising than now.

ALPINE.—The *Chronicle* says that the hardy pioneers of Alpine county are slowly, but surely, being recompensed for years of patient industry, and one by one their claims are exposing deposits of rich ore. A few days since a ledge of valuable ore was struck in the Mullen Company's tunnel, at Mogul. The ledge is six feet in width, and the ore is a decomposed white quartz, and assays, after careful sampling, $38 to the ton in silver. It contains no gold, and scarcely a trace of copper. It is the intention of the company to send their ore to the Pioneer Quartz mill and keep it running steadily. "Little Mogul" bids fair to be the first district in Alpine county, having a claim sufficiently developed to keep a mill supplied with ore. The Pioneer Quartz Mill is said to be one of the best appointed mills of its size on the East side of the mountains. The Monitor *Gazette* says that Mr. Coffey, one of the principal owners of the Sherman, is at work developing the same, and with excellent prospects. The Santa Eulalia company is steadily at work, and expect to pierce their ledge after running their tunnel forty-five feet further.—The ledge is said to be eighty feet thick. The Morning Star Company expect to reach their shaft with the tunnel inside of two weeks, when a large quantity of ore will be within reach. The American T. & S. M. Co., having run their tunnel 200 feet, have struck a body of arsenical pyrites or mundic, so friable that it rapidly falls to pieces on exposure to the air. The indication is considered a good one.

In the Silver Mountain District, a meeting of the stockholders of the Buckeye Co. No. 1, was held on the 5th inst., to take into consideration the propriety of leasing the mine. It was voted to do so. Work is going ahead on the Mountain, Pennsylvania, Washington, and Buckeye No. 2. The Lady Franklin company has suspended operations until they can get over machinery to put on the shaft.

NEVADA.—A quantity of rock, consisting of a hundred tons or more, from the Talbert ledge, Willow Valley, now being crushed at the Oriental mill, promises to yield fully $50 to the ton. It is the intention of the company to erect steam hoisting works on the ledge.

John Spayth, some two weeks since, says the *Gazette*, discovered a quartz ledge, about ten miles above Nevada, on Deer Creek, which is likely to prove one of the most valuable in the county. On his return to Nevada, he brought a specimen, which, on being pounded up and washed out, yielded $640.75. The specimen was nearly pure gold. Spayth has organized a company, and returned with his partners to further prospect and stake off the claim. The ledge is said to be twelve feet in width. The exact locality of the discovery has not been made public.

The excellent mill, constructed for the Star Spangled Banner company, has been started up. It consists of ten stamps at present, but arranged for ten more, driven by a 40-horse power engine. The sulphurets are concentrated and subsequently worked in one of Hopkins' pans. The company will also have their new hoisting and pumping works in operation in a few days, after which the mill will be fully supplied with rock.

At Grass Valley, considerable trouble is experienced by reason of the bad condition of the roads, in consequence of which it is difficult to keep up the supply of wood, and the mills at a distance from the mines have the additional difficulty in getting rock.

The *Union* is informed that the Watt Bros. have purchased a half interest in the mining claim known as the Rush and Laton ground, on Ophir Hill; a first extension south, of the celebrated Ophir Lead, owned by Messrs. Lee and Houston. They will erect an extensive mill upon the mine at an early day.

The Watt Brothers have sold their interest in the old mine and mill, on Massachusetts Hill, to the Stockbridge Co. The portion of the mine owned by the Watts' having been taken up in superficial claims, has been worked out, and the Stockbridge company coming in next have bought their improvements, with which to work *their* ground. An offer equivalent to a total valuation of $80,000 for the entire Stockbridge mine, was recently offered and refused by the latter.

It is reported that the Allison Ranch is now turning out gold in almost fabulous quantities. The rock being crushed is taken from a depth of seven hundred feet, and yields at the rate of $1,800 a ton! The yield of the rock crushed in the mill, for the past month, is said to have been at the rate of $200,000 a week—that amount having been cleaned up each Saturday night, for four weeks past. At this rate, the mine would turn out ten million dollars per year!

Excelsior District.—The Virginia *Union* says that the owners of the Enterprise claim, in this district, are prosecuting the work of taking out their rich paying rock very lively. Quite a hole has been made in their old starting place, a shaft some forty feet deep having been sunk in it, at the bottom of which better ore than ever has been obtained. Another shaft has been commenced west of the old one, striking, at a depth of ten feet, the same quality of rich ore. The company's mill, being put up by Messrs. Goss & Lambert, of Sacramento, will be finished and in running order in the course of fifty days, and then we may expect to hear of such a yield of the precious metal as will astonish us, as the rock assays high up in the pay figures. Few leads have been located in Excelsior District which prospect less than $20 per ton; which ore can be mined and worked there for less than half that sum. Waters & Co. made an assay a day or two ago of rock from the Daniel Webster claim, which yielded at the rate of $8,454 06 to the ton. A sample of rich picked rock, of course.

TUOLUMNE.—The Tuolumne *Courier* seems jubilant over the prospects "there and thereabouts." That paper learns that a company on Pacific Flat (Blue Gulch), near Algerine, last week, had the good fortune to come across a quartz lead which showed nearly as much gold as quartz. The lucky fellows have already taken out several thousand dollars, and still continue the pleasing pastime; much more of the stuff being in sight. Last Saturday, a Mexican prospecting on Whisky Hill, below Jamestown, struck a pocket and in a few hours took out a panful of very rich specimens. On Wednesday, a miner on Wood's creek picked up a chispa worth twelve dollars. We also have heard of a streak of luck that some gentlemen of Sonora have fallen into, but are requested not to make the matter public at present.

The Mount Vernon mine, in this county, on Friday, February 2d, cleaned up $6,000 as the product of eleven days' work.

CALAVERAS.—The San Andreas *Register* says that P. A. Bordwell & Co. on Centre Hill have struck some very rich dirt in their claim, from which they expect to get good pay, if it continues to yield as well as it prospects. They have been at work for a long time, and have spent considerable money, and much time in opening the claim, and have at last found dirt which promises to pay them for their labor. They deserve success, for they are industrious and hard working miners.

AMADOR.—The Amador *Ledger* says, the Butte Ditch Company have completed the laying down of their large iron pipe that conveys water on the top of Tunnel Hill. It works well, and meets their most sanguine expectations. Quite a number of miners are getting ready to go to work in that locality.

The *Dispatch* says that Captain Little, Denning and Burwell, owners of the Blue Jacket quartz lode, have been offered $30,000 for their interest in this lode. The amount offered is satisfactory but the terms of payment do not suit. The parties negotiating for this valuable lode are agents for a company of New York capitalists.

Some time next week there will be twelve stamps in operation in the mill on the Coney lode, an increase of four stamps since the mill was built. The proprietors intend to add four more stamps within the next month.

The enterprising company which owns the Oneida quartz lode, started twenty additional stamps in their mill last week on Friday. They now run forty stamps.

Dick Howard, who has for some weeks past been energetically prospecting in Hunt's gulch for quartz, at last has the pleasant satisfaction of seeing his labors rewarded by the development of a well defined ledge, about three feet in width, literally dotted with gold. Mr. H.'s claim is believed to be on the same lode with the Coney and Blue Jacket.

VIRGINIA CITY AND VICINITY.

The Gold Hill *News* says that the shipments of bullion, for the past few days, has been light, not because the rock does not yield as much as formerly, but from the fact that the horrid condition of the roads will not permit the teams to more than keep the mills half supplied, while the dumps are half full.

The *Enterprise* gives the following enumeration of assessments recently levied:—The Globe Mining company has levied an assessment of one dollar per share; Hale & Norcross, of twenty-five dollars to the share; North Comstock G. and S. M. company, assessment No. 8, of twenty-five cents per share; Overman company, ten dollars per share; Rogers S. M. company, Flowery District, three dollars per share; Kentuck Mining company, Gold Hill District, has rescinded assessment of seventeen dollars and fifty cents per share, which was levied on the 12th day of December, 1865. The same company, on the first day of February, levied an assessment of seven dollars and fifty cents; Lady Bryan G. and S. M. company has levied an assessment of one dollar per share; Mount Blanc G. and S. M. company, two dollars and fifty cents per share.

The Mariposa mill, at the foot of Cedar Hill, has lately been thoroughly overhauled, the old Howland rotary battery thrown out, and a new straight 12-inch stamp battery substituted. The six Smith pans have been turned into Wheeler pans, by permission of Wheeler & Randall, patentees. The pans, thus improved, are considered even better than the regular Wheeler pan, inasmuch as they are wider and deeper than the original Wheeler pan. The pans were altered at the Pioneer Foundry, where patterns for such alterations still remain. The various improvements made have increased the capacity of the mill from to twenty tons per twenty-four hours. The Mariposa mill seems in a fair way to become more profitable than ever before.

By actual survey it has been ascertained that the rich deposit of ore lately struck by the Hale & Norcross is seventy-nine feet south of the south line of the Savage. The survey was made by the Savage Company.

The Kentuck Company are taking out a considerable quantity of excellent ore.

REESE RIVER.

SAN ANTONIO DISTRICT, NYE COUNTY, NEV., January 9th, 1866.—*Editors Mining and Scientific Press:*—For several weeks we have been in regular receipt of your valuable paper, in which I see you invite communications from all points, particularly from where mining is being carried on. Being myself one of the founders of this district, and having resided here almost continuously for two years, and being pretty well acquainted with its merits and prospects, I will assume to give you, from time to time, a few items of the operations going on hereabouts.

San Antonio district is located in an isolated mountain, about ten miles east and west, by forty miles north and south. It is bounded on the east by Monitor Valley, and on the northwest and south by Big Smoky Valley, which continues its course south, and merges into "Death Valley." San Antonio lies about one hundred miles south from the city of Austin, sixty miles southeast from Ione, and fifty miles northeast from Silver Peak District.

The mountains in this portion of the country seem to have been broken up and scattered in isolated masses, rather than formed in connected ranges.

About twenty-five miles southwest from San Antonio, a lone mountain of granite rises to the hight of 3,000 feet above the valleys. This is the only granite found in this section of the country.

In other places vast masses of volcanic rock are seen that rise unconnectedly, and from isolated mountains. The mountains where the mines are found are composed almost, if not quite exclusively, of argilaceous slate. To the northward and eastward the rocks are composed of the older volcanic productions—basalt and the older lavas.

As usual, in this, the Reese River region, no metalliferous veins are found in the volcanic formations. The slate in this district has a different lithological character from that usually found in this country, and its structure resembles shale more than that of any other district. It is probably of a more recent geological epoch than the slate found further to the northward.

San Antonio was first discovered in October, 1863, by some Mexicans. The famous Liberty ledge was the first location made. This mine has been worked during the past year to a depth of two hundred and fifty feet, and though no water has made its appearance in the mine, the same rich ore is found at the bottom of the incline. Some thirty tons of ore have been taken from this mine, hauled and reduced at the Austin mills, at a expense of $125 per ton, and then yielding a clear profit to the owners of $200 per ton. The lowest yield was $317 per ton. The vein is from four to six feet thick, its course is north and south, and dips at an angle of 40° to the east. Several "horses" have occurred during the working of the incline, still the vein has resumed its usual regularity. It has solid slate crossings, with clay selvages. The "Liberty" is pronounced by all who have seen it to be the largest vein of rich chloride ore yet found in the whole Reese River country. In many places down the incline large sheets of horn silver (the purest kind of chloride of silver) can be seen, and taken off with a pen-knife. Work on the Liberty has been temporarily suspended, for the purpose of erecting hoisting works, after which the mine will be worked steadily, and will surely prove a source of great profit to its lucky owners.

I speak more particularly of the Liberty in this, from the fact of its being the first discovery of the district, and its having the most work done, and having sent away the largest amount of rich ore. But in speaking of the merits of any one mine, I do not wish to detract from the merits of others, all of which I will speak in due time.

San Antonio is but little known to the outside world, from the fact of its isolated situation. It was discovered at the time of the crisis of 1863, and but few of the early locators have been able to hold on to their mines. But the day long wished for is now advancing, and we can see through the sifting clouds of adversity evidence of our future prosperity.

Mr. Wm. H. L. Barnes, lawyer of your city, and Mr. Geo. Hunt, of Gold Hill, assisted by W. C. Ralston, of the Bank of California, have nearly completed a first-class ten stamp mill, with four roasting furnaces, and all the appliances for the reduction of all kinds of ores. The amalgamation will be by the barrel process, and under the immediate supervision of Mr. E. N. Riottle, formerly of the assay office of Theall & Co., of Austin. Mr. Riottle is an experienced and competent metallurgist, and from numerous assays and workings of ores from this district, he is well satisfied of the richness of our mines.

Mr. Hunt has full charge of the whole works, and deserves great credit for the efficient manner in which he has pushed forward work on the mill, as well as for the good judgment displayed in assisting the Lee Company in getting out ore for the employment of his mill.

Before this letter reaches you, we will hear the steam whistle echoing through our hills and valleys, and the clattering stamps will send new encouragement to the miner's cabin door; the miner, in return, will enter his mine with renewed vigor to extract the precious metal.

In my next, I will give you a full description of the working of our "Pioneer Mill," in all its details, as well as a brief notice of some other of our leading mines, The Potomac, Cruzes, Lee, Rigby, Vulcan and Las Animas, and many other rich ledges are deserving of a better notice than I can give, and only wait capital and machinery to astonish the world with their richness.

At the regular annual meeting of our District, held a few days since, Mr. J. P. Comer was elected President; W. L. Stevens, Secretary, for the ensuing year, and Syl. Comer, Esq., was re-elected our District Recorder.

We have very cold weather up here; plenty of ice and snow, and fine moonlight nights. All we lack is an importation of crinoline, a few straps of bells, and we might enjoy life as we were wont to do in olden time, before we left *America*.

JUANITO.

THE FUTURE OF AMERICAN CITIES.—Horace Greeley gives it as his opinion that the chief cities of the United States will rank, in the census of 1900, in the following order: 1, New York; 2, Philadelphia; 3, St. Louis; 4, Chicago; 5, Cincinnati; 6, San Francisco; 7, Baltimore; 8, Boston; 9, Petersburg; 10, Richmond.

WATER STRIKE.—The miners at Michigan Bluff are on a water strike this winter. The Ditch Company heretofore has charged twenty cents per inch, and the miners demand a reduction of five cents. The result is dull times in that section. When the matter will be compromised or settled no one seems to know.

NEW FLOURING MILLS.—Stock to the amount of $16,000 has been taken, by leading citizens of Vaca Valley, in a Company organized for the purpose of establishing a steam flouring mill in that vicinity.

Mechanical.

THE "DISENGAGING EYE."—This useful California invention, which we described at length in our issue of the 2d of last December, is exciting a wonderful degree of interest at the East, and the inventor, according to the New York correspondent of the *Alta*, is the recipient of marked attention from the mercantile community and the newspaper fraternity of that city. The prospects seem good for an extensive sale of what is regarded by everybody who has seen the model, as the best thing yet gotten up for the saving of human life in cases of disaster by sea. The inventor, Mr. Brown, in connection with his assignee Mr. Level, has applied for letters patent at London and Paris. He has also obtained from the Secretary of the Treasury permission to exhibit the admirable qualities of the apparatus on board of one of the government steamers in the harbor of New York, similar to the experiments made in this harbor. The trial was expected to attract a big crowd. Mr. L. will probably make a contract at Newark, for the construction of a sufficient number of the "Disengaging Eyes", to meet the heavy demand which its soon to be proved success will create. The American patent for this invention was secured through the MINING AND SCIENTIFIC PRESS PATENT AGENCY.

IRON SHIP BUILDING IN ENGLAND, is being carried on to an enormous extent. The tonnage amount of that class of shipping constructed at the different dock yards of Great Britain during the year 1865, is estimated at 500,000 tons; the number of vessels constructed numbering about 450. The superiority of iron over wood for ship building, is now pretty well established; and the time cannot be far distant when almost the entire of both the government and mercantile marine of Great Britain will consist of iron-built ships. The scarcity of timber, and the abundance of coal and iron in that country, renders iron ships more economical there than in the United States; where, so far as the development of our coal and iron interests are concerned, the relative conditions of wood and iron are reversed.

HEAVY ON THE RAILROADS.—The late terrible war was heavy on the southern railroads. Every possible expedient was resorted to by our troops to effectually destroy, for use, the rails upon the roads which were torn up. Transportation beyond the reach of the enemy was impracticable, and any mere tearing up of the rails and road bed was soon repaired. Hence huge bonfires were made upon which the rails were piled to heat and twist them in such a manner that they could not be again made serviceable, until taken to a rolling mill. Even to the present day, it is said that the quantity of rails so destroyed and still lying by the side of the tracks, is immense on the roads that were most frequently visited by the National troops. Along the Weldon, (N. C.) railroad, thousands may yet be seen bent into right angles, and many completely coiled around the trees! Let us hope that the occasion for such a wholesale destruction of property will never again occur in our now peaceful land.

A ROTARY ROCK BORING DRILL.—Among the patents recently issued at Washington is a Rotary Rock Boring machine, which consists of a drill composed of a number of scolloped cutting wheels, which are arranged in a common head, on axles passing through said wheels at right angles, and in such a manner that by giving to the head a rapid rotary motion, the wheels will cut into the ground or rock and produce a clear hole. The dirt or dust is raised by the action of a spiral flange, secured to the outside of the drill rod, guided by conveniently arranged friction rollers. A stream of water is made to pass continually to the bottom of the hole through the drill rod, which is made hollow for that purpose. Much of the dirt is thus removed. The machine can be applied to ordinary rock drilling or well boring.

A SHIP OF THE SECOND CENTURY.—In the course of digging a trench for military purposes, during the late Danish war, the workmen came upon boggy soil, and at a depth of five feet, discovered the remains of a very ancient ship imbedded in the bog. The site is now some distance from the sea (at Wester Sutrup, in Sandewitt Bay); but at the time when it was deserted it was no doubt "run up" on the beach. It is of oak, but in so very defective a condition, that it had to be strengthened with iron bands before it could be removed to Flensburg, where it may now be seen. The keel is bent upwards at both ends, after the fashion of a modern gondola, rising to a hight of nine feet, ten inches in the bows, and ten feet eleven inches at the stern. The total length is seventy-nine feet ten inches, by a width of eleven feet ten inches in the waist, by a hight of four feet two inches. There appears to have been no deck, but several lockers were found, some of which contained bones of animals. Besides this were discovered a number of spears, bows, arrows, battle-axes, wooden clubs, knives, etc.; but, what was more important, some coins were found, which gave the date of the time when this ship floated, not only on the Baltic, but perhaps to the distant shores of Britain. The coins are Roman, and of the second century, A. C.; and there were also bracelets, rings, and other ornaments, besides cooking utensils, etc. All these articles are now in the Archaeological Museum at Copenhagen, but the ship itself the Danes were unable to get away before they had to give place to the advancing Austrians.—*London Builder.*

TRAVEL BENEFICIAL TO WORKMEN.—A contemporary says: We have always thought that our workmen might imitate one practice of their German brethren with advantage. On attaining his majority the German operative is obliged to travel through certain parts of the country and learn the different processes and methods of practicing his art before he can settle down and follow his calling on his own account. The tendency of this rule which is imperative, is to improve and enlarge the ideas of the mechanic. Working in one town, continually, the artisan becomes familiar with the methods there practiced, and whether good or bad, he is acquainted with these only. He is apt to become a man of one idea, and to think that the mechanical world is bounded by the limits of his own factory. It is unnecessary to remind the thinking reader, that such a course is directly opposed to progress.

To become thoroughly imbued with a sense of importance to travel as a means of developing and educating the mechanic, one has only to observe the different modes of doing the same piece of work practiced in different places. For instance, one man has a bed plate to plane; he roughs it off, takes half a dozen cuts where one would suffice, and dallies with the work, when an energetic business-like way of going at it would have done the same thing in half the time. New tools, new uses for old tools, new processes, materials and designs are only found by travelling about among mechanics, and getting acquainted with what is transpiring in the world of art outside of the sphere in which an individual may dwell.

MAGNESIUM FOR WAR VESSELS.—It is now recommended that vessels of war should be built of magnesium, which is but little heavier than heart of oak, and as strong and tenacious as steel. It is estimated that the ocean itself contains 160,000 cubic miles of magnesium, a quantity which would cover the entire surface of the globe, both sea and land, to a thickness of more than eight feet. In obtaining salt from sea-water, the residuum is largely magnesium. The burning of a magnesium ship at sea would be a magnificent sight, a fire at which the stars "cold in their unimagined distances" might warm themselves.

A PUMP PROPELLER.—The London *Mechanics' Magazine* says that a vessel is now building for the English Admiralty, by the Thames Iron Works and Shipbuilding Company, which is remarkable as having been designed on a plan expected to supersede all other steam vessels; screw or paddle, by proving the practicability of propelling vessels by sucking in a column or "rope" of water, by a turbine wheel arrangement through a ship's bottom and "squirting it again out of the ship through her sides. It is feared that, whatever results may be obtained, they will be rendered unimportant by the excessive cost of their production.

A WATER LIFTER.—The Sacramento *Bee* says that Wilcox's Water Lifter, a steam pump without engine, piston or plunger, is on exhibition at No. 17 Front street, Sacramento, between I and J, which is worthy of public attention as a mechanical wonder. We described a machine, possessing similar powers, in our issue of three weeks since. That machine is known as a "Steam Syphon Pump."

A CHANCE FOR INVENTORS.—In Paris horse-shoes must not be roughed, because that wears out the macadamized paving so general on the great thoroughfares of that city; but it tells fearfully on horses. Paris would reward the inventor who would contrive a shoe which, without having picking projections, would yet have bite enough to keep from slipping. Intervening strips of steel might, by the quicker wearing down of the softer iron, keep up the required edge, and not be too costly.

THE PATENT LAWS.—Persons interested in patents for inventions, and who have been led to believe that it is intended to obtain through Congress a very essential modification of the patent laws, are authoritatively informed that no material change in such laws will be asked for during the present session. Only a few of the minor points affecting the details of securing patents will be modified.

GEO. W. DAY, of Chelsea, Mass., the inventor of a machine for making shoes which drives the shoe thread like pegs, a good imitation of pegged work, has sold his interest for $200,000, and is to receive a percentage on every pair of boots made by this process.

WHERE WAS THE FIRST RAIL ROLLED?—Mr. W. S. Langridge, of Aldermasley Iron Works, Ambergate, says, in the *Mining Journal*: The first rail ever made was at the Bedlington Iron Works, Northumberland, and from these works a staff of men were sent to Penydarron to teach the Welshmen to make rails.

LOSS OF LEAD SMELTING.—Not less than 800 tons of lead were recently obtained in one year, the result of the dust which accumulated within that time in the long flues of a lead smelting furnace in the north of England.

CURIOSITIES OF CLEAR LAKE.—A correspondent of the Healdsburg *Standard* says: This beautiful sheet of water is the great feature of Lake county; take this away, and the valley would lose its greatest charm. It is about forty miles in length, from ten to fourteen miles in width, and is fed by numerous creeks that put down from the mountains on every side. It has an outlet through Cache creek into the Sacramento river. Some people think that it has other outlets down under the surface that communicate with the ocean, as it is scarcely ever known to rise during the heavy rains, and Cache creek is very little affected. The shores are generally clean, the margin forming along the low foot hills. It is seldom disturbed by rough winds, making navigation pleasant and safe, both for pleasure and profit. At one place, near the lower end, and about two miles out from the shore, there are several springs of boiling-hot water, one of which boils and bubbles to the hight of ten feet; they are a wonderful curiosity, and your correspondent viewed them from a respectful distance, not caring to go near where the water was in such commotion. The place is held in superstitious dread by men who run small crafts on the lake, and it is an idea prevalent with them that these springs are boiling up from the crater of an old volcano which has sunk beneath the surface, and that it is liable to burst forth in terrible fury at any time. There is also a story, believed by many of the "oldest inhabitants," that the lake is inhabited by a monster a regular man-eater; and it is said to have been seen by several persons, who describe it as "some like a fish, with a good deal of snake—green-eyed," and big enough to swallow a man without blinking; I could not ascertain that it had ever swallowed anybody.

THE OPHIR SUPERINTENDENCY.—We regret to learn, says the Virginia *Enterprise*, that Captain William Blanding, President of the Ophir Company, and who has for the past year so ably and faithfully superintended the local management of the mine, is about to leave Virginia City to resume the duties of President of the company in San Francisco. By his strict integrity, courteous and gentlemanly deportment, Captain Blanding has won the esteem of all with whom he has been brought in contact, and has proved himself one of the most capable business managers of mines in the State. Mr. James E. Fair has been appointed Superintendent in place of Captain Blanding. The latter gentleman has had large experience both in California and Nevada in the direction of mining work. The explorations are now being vigorously carried on in the ninth or 559-foot level of the mine. Success to the old Ophir, the pioneer mine of Virginia.

PRICES CURRENT IN THE MINES ON THE UPPER COLUMBIA.—The following are the prices current in the new mines up the Columbia river, at Big Bend, on the 20th of November: Bacon, $1,50 ℔ lb; Flour, $80 ℔ 100 lb; Sugar, $1,50 ℔ lb; Coffee, $1,50 ℔ lb; Tea, $3 ℔ lb; Butter, $2 ℔ lb; Beef, 65c ℔ lb.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by transmitting the same to distant agencies, situated in New York or Washington.

The first question that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application form patent to the Government, embracing a petition, specification, model, duplicate drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States, upon the same terms as citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, procuring it from the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause the reason or reasons therefor to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, our Washington agent has access to all the drawings, models, books and specifications cited in reference, and we report the result to parties free of charge.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable chiefly on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us, works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are as moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement in some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always advise us by letter when the model and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as rapidly as possible. When the documents are ready to send them to the inventor, or to mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless the case presents complications; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time, but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos..	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years..	15
On every caveat.....	10
On issuing each original patent.....	20
On antedating.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the granting of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

N. B.—We make out our own forms for applications, etc., and would respectfully inform all parties that we have no printed blank forms for sale.

It is Impossible for editors to know ALL the merits and demerits of their correspondence; consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited, and all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Mr. Wm. R. Bradshaw, is our Special Correspondent and Traveling Agent. All favors or assistance rendered him in his progress through the country in behalf of our journal, will be duly acknowledged.

SAN FRANCISCO, Jan 1st, 1866.

Mr. A. C. Knox, is our fully authorized Traveling Agent, and all subscriptions, or other favors extended to him, will be duly acknowledged at this office.

SAN FRANCISCO, Jan 11th, 1866.

Mr. I. N. Hudson, is authorized to solicit subscriptions, advertising, etc., for the MINING AND SCIENTIFIC PRESS, in San Francisco, and to receipt for the same.

San Francisco:

Saturday Morning, Feb. 17, 1866.

Endorsement by the Miners' State Convention.

The following resolution was adopted by the California Miners' State Convention, held at Sacramento, Jan. 17th, 1866:

Resolved, That we regard a mining paper or journal of great importance to the mining interest of California, and we recommend the MINING AND SCIENTIFIC PRESS, of San Francisco, to the consideration and support of the miners of the Pacific coast.

THE COPPER INTEREST.

The amount of copper ore which passed through Stockton from Calaveras county, during the year 1864, was estimated at 14,000 tons, valued at about $600,000. That amount increased in 1865 to fully 25,000 tons, valued at $1,500,000. The increased proportionate value is due to the increased quality of the ore shipped—the experience of 1864 having proven that it will not pay to ship anything but first class ore. This is looked upon as but the beginning of the copper business for that county. Future developments, greatly aided as they will be by the railroad now in process of construction, will increase the value of that class of ore shipments to an almost indefinite extent. The copper belt extending through Copperopolis some six or eight miles either way, is considered by scientific men, as well as old experienced copper miners, the largest and most valuable yet discovered in any part of the world. It is estimated that fully 50,000 inhabitants will soon be directly and indirectly supported by this mineral district.

Five thousand pounds of copper were shipped a few days since from the smelting works of the Buchanan Company, in Mariposa county, for San Francisco. This makes 24,000 lbs. that have been shipped by the above company since the completion of their smelting furnace.

Heury & Co. are putting up new and extensive smelting works in place of the old ones, near James' Ranch, in the Hamilton District. Their vein—the "Lone Tree," is proving its richness plainer each day.

The smelting furnaces at Genesee Valley were fired up for the first time last week. A quantity of copper ore was put through, everything working well. The Company are sanguine of success.

DECLINE IN THE PRICE OF COPPER.—By private telegraphic advices, recently received in this city, we learn that the price of ingot copper depreciated in Europe, between the 20th of December, 1865, and the 17th of January, 1866, to the extent of $73.09.

AN IMPORTANT ENTERPRISE.

A MINING SCHOOL FOR THE PACIFIC COAST.

One of the most important educational needs of California has just been met in the establishment, in connection with the City College, at the corner of Stockton and Geary streets in this city, of a School for giving practical instruction in the sciences bearing upon mining pursuits. We have long urged upon our citizens the necessity for an Institution of this character, and we are now happy to announce to the mining interest throughout this coast that a school, precisely adapted to our wants, will be inaugurated on Tuesday evening next, as above, on which occasion the public is invited to attend. Addresses will be delivered by several gentlemen, the plan and objects of the School be fully explained, and its importance to the mining interests of this coast will be fully set forth.

A suitable building of brick has been erected on the College grounds for this especial purpose, provided with three melting furnaces, two cupelling furnaces, drying ovens, sand bath, arrangements for distilling water, and ample bench conveniences for from eighteen to twenty students, fitted up with water and gas-fixtures, etc., all in the most perfect manner. Adjoining the laboratory is a large lecture room, for public lectures; also a philosophical room, provided with an extensive assortment of instruments for illustrating the physical sciences, experimental instruction, etc. An excellent library is already connected with the Institution, and an extensive cabinet will soon be added. An Astronomical Observatory, provided with a superior four-inch refractory telescope, surmounts the main building connected with the college. If the Institution is encouraged by a sufficient number of students, another story will be added to the building, so that the chemical and metallurgical departments may be kept separate.

The above is in addition to the usual English, mathematical, commercial and classical course of education pursued at this college.

The appointments of this Institution are larger and more complete, in its metallurgical department, than those connected with the Royal School of Mines in London. The plan of instruction will be very similar to that pursued at that celebrated school; modified, however, to suit the peculiar wants and necessities of our local circumstances and needs.

The advantages of the Institution are placed before the public in the broadest and most liberal manner, and in such a way that all persons desirous of availing themselves of any particular branch or course can do so. The miner or millman, for instance, who may have a few weeks only to spare, can visit the city, and for a reasonable compensation be thoroughly instructed in the ordinary processes of assaying; or he can, at his convenience, extend his studies and practice to any extent which he may desire. No man who has not at least a preliminary knowledge of assaying, should be considered competent to take charge of an amalgamating room.

As a guarantee that this Institution is all that it claims to be, we have only to mention, as among its Board of Trustees, such names as T. H. Selby, Esq.; Dr. H. P. Coon, Mayor of the City; C. Wadsworth, D. D.; G. Burrowes, D. D.; H. H. Haight, Esq.; R. B. Woodward; H. M. Newhall; J. G. Kellogg; A. Campbell, Esq.; A. J. Ralston, etc.

The Faculty of Instruction is full, able, and liberal; the whole under the general direction of Rev. P. V. Veeder, who is acting as President during the absence at the East of Dr. Burrowes. The Chemical and Metallurgical department is under the immediate charge of Professor Price, late Professor of Chemistry in the Normal College of Swanzea, England.

A MINING INTELLIGENCE EXCHANGE AND RECORD OFFICE.

In connection with the above, and for the furtherance of the general mining interests of this and the adjoining States and Territories, we again take occasion to state that our plans for the establishment of a "Mining Intelligence Exchange and Record Office," are approaching a completion. This new department which we propose to establish in connection with the MINING AND SCIENTIFIC PRESS, and which, to a certain extent, will be made an adjunct and assistant to the Mining School already alluded to, will have for its object the furtherance of the development of the immense mineral resources of the Pacific Coast, in which all classes of society are so deeply interested. The benefits of our labors in this direction will be FREE TO ALL.

The plan which will be pursued will be to diligently seek out and procure all available information which can be obtained from trustworthy sources, in relation to the mines, their development; the best mode of working them; the particular processes suited to different localities and different classes of ores; the knowledge of different mining localities, their geology, general character, and all other information bearing upon the economy of working such mines.

We shall also collect plans, models, drawings, etc., of all prominent mines in the country, and the machinery employed for working the same. All of which will be open for the inspection, examination and study of the mining public, and at the same time made specially available for the benefit of the students connected with the Mining School already established.

We are also prepared to give full information upon any and all subjects bearing upon chemistry, metallurgy and mining. Particular attention will be devoted to consultations upon the application of chemistry to the industrial arts. In cases of a purely business nature, involving costly or tedious experiments, by experts, a fee will be charged proportionate to the degree and value of service rendered. The same rule will be adopted in the application of metallurgical principles, when time and expense must be necessarily incurred. Advice and ordinarily attainable information will always be FREE. We have at this office one of the best scientific libraries in the State, furnished with all the latest and most authentic standard publications, and we are in regular receipt of the principal mining, metallurgical and scientific publications of all parts of the world, by which we are kept in constant and early advice of the latest improvements and discoveries in every department of industry and science.

Experts will be provided for parties, either at home or abroad, who may desire a personal and reliable examination or survey of mines. None but persons of undoubted competence and responsibility will be employed or recommended for such service. Mining superintendents and persons qualified to supervise any of the various labors connected with mining and metallurgy, will be supplied on application at this office.

AN ASSAY DEPARTMENT

Has also been connected with the office of the MINING AND SCIENTIFIC PRESS, where assays of every description will be made by competent persons, who fully understand their business.

Our long experience and intimate practical acquaintance with every department of mining, and all the varied mining interests on this coast, has enabled us to collect a vast amount of valuable local information, which the columns of the MINING AND SCIENTIFIC PRESS have been altogether insufficient to contain. This information we are now classifying and shall soon place upon record so as to be made of convenient reference. When so arranged it will be made free to all. The record already embraces an amount of matter sufficient to fill several volumes—not one-tenth part of which is within the reach of any other parties than the proprietors of the MINING AND SCIENTIFIC PRESS. We are moreover constantly making additions to this class of information; in aid of which we keep constantly in the field from three to four traveling agents, in addition to quite a number of regular local correspondents. We have the further advantage of an exchange list comprising about every publication issued on the western slope of the Rocky Mountains. All the information attainable through these several agencies, will be free to all visitors to this office.

We have undertaken the above labor in the belief that we shall thereby be able to render important service to the mining interest. By collecting and placing upon permanent record, for convenient reference, all the information above alluded to which shall be too voluminous to be placed before the public through the columns of our weekly newspaper issue, we shall enable parties seeking investment to conveniently lay hold of valuable information, which shall serve to guide them in their negotiations. All who are conversant with past mining transactions on this coast are aware of the incalculable injury which our legitimate mining enterprises have sustained from the fraudulent representations of unscrupulous speculators. With the facilities for information which we propose to place at the free use of all, such swindles cannot be perpetrated upon any party who will avail themselves of the most ordinary means for guarding against such impositions.

Through our agencies, already established in the Atlantic cities, we hope to be able to reach every considerable community there, and perform an important part in once more restoring, in a measure at least, the confidence of capitalists abroad in the value of our mines, and the integrity of the great mass of our people.

In order to carry our plans to a successful issue, we need the united support of the miners and the mining public every where. The well established position of the MINING AND SCIENTIFIC PRESS, and the reputation for enterprise and integrity which the proprietors flatter themselves they have acquired, we think will be a sufficient guarantee that we are in earnest in what we propose, and that we have both the ability and means to carry it out to the letter. To do so will be our highest ambition.

LATEST FROM ARIZONA.—Very little mining is being done in Arizona at present. Work is progressing upon some six or eight mines in the vicinity of Prescott. Should these prospecting operations turn out well, several mills will be put up in the spring.

Mr. William Ceele, is said to have recently discovered one of the richest gold-bearing quartz leads on the continent, a few miles from Prescott.

At last accounts snow was sixteen inches deep in Prescott, and the weather was the coldest ever known there.

Military operations appear to be moving slowly, owing to the unpleasant state of the weather, and the difficulty of bringing the Indians to a stand. An improvement in military matters is looked for soon; as General McDowell had just arrived at Prescott, and was engaged in straightening out military matters in his usual energetic style. It is claimed that about as much strategy is required to capture a Camanche village as was employed in the taking of Richmond!

MECHANICS' INSTITUTE.—The annual election of this association will take place at the rooms of the society in their building, No. 529 California street, on Monday, March 5th. At an adjourned meeting, held last evening, the committee appointed for the purpose reported the following as the regular ticket:

For President—H. J. Booth.
Vice President—D. A. Macdonald.
Recording Secretary—Robert Riddle.
Corresponding Secretary—A. S. Hallidie.
Treasurer—Edward Nunan.
Directors—Jas. B. Johnson, P. J. O'Connor, Henry Webb, John W. Farren, F. G. Edwards, James Speirs.

The nominating committee have power to add one more name to the directors.

THE NEW "SUN PEARL PICTURES."—Messrs. Bradley & Rulofson have applied, through our agency, for U. S. Letters patent on this method of producing this new and beautiful style of pictures. We shall further allude to this decided improvement in photography in another issue.

SUBSCRIBERS who do not receive the MINING AND SCIENTIFIC PRESS in due time, are requested to inform the publishers.

A TRIP TO MOUNT DIABLO.

A trip to Mount Diablo at the present time is not a very particularly pleasant excursion. Having a little business in that direction, however, we stepped on board the trim little steamer Paul Pry, on Tuesday of last week, and were soon landed at

ANTIOCH.

The next morning, having a few moments to spare, before starting for the mines, we took a look around town. Business in Antioch is rather dull at this time, on account of the impassable condition of the roads, which effectually cuts off all communication with the coal mines. With the return of fair weather, however, inland communication will be again restored, the teamster will return to his accustomed avocation, and business in Antioch will once more resume its wonted bustle. Much speculation exists there, at the present time, with regard to the effect which the railroad is going to exert upon the prosperity of the place. It is well known that the railroad company has selected a point some two miles below Antioch as its *embarcadero*, whither it will take all its freight, and from which point it will transport its supplies to the mines. The general impression at Antioch, is that the increase of business at the mines, and the difficulty of access to the upper terminus of the railroad from many of the mines already opened, and others yet to be developed, will admit of the still onward progress of this thriving little town. We don't doubt it. Moreover, we look to developments at the mines which will soon demand the construction of still another road for the accommodation of such transportation as cannot reach the present one, and which will have its lower terminus at Antioch. The value and extent of these mines is not yet fully understood. We shall have more to say of them next week.

THE COPPER SMELTING WORKS,

About which so much has been said, and from which so much was expected, are located a few rods up the river from the town, having a landing of their own. These works are now idle. All the ore which was purchased by the company has been worked up, and the *matte* shipped to the East. The furnaces, we believe, were well adapted to the purpose for which they were constructed; but the high price of transportation of fuel and of labor would not admit of their being made a pecuniary success, on the low class of ores upon which they were tried; while the high price paid for the selected ores for shipping, precluded their purchase by the company at rates at which they could be made remunerative for smelting here. We are not informed as to the future disposition which is to be made of the property. The furnaces are two in number, and of reverberatory construction.

THE QUICKSILVER MINES.

Most of our readers are aware that preparations have been some time in progress for the erection of the necessary furnaces and machinery, for the purpose of working the quicksilver mine located on the northeasterly flank of the mountain, nearly opposite the town of Antioch. Mr. R. E. Oglesby, last spring, made an arrangement for putting up the necessary fixtures and machinery for working the mine and extracting the metal from the ore. This machinery is now completed and was started up while we were there. It consists of a rotary crushing mill, driven by a steam engine, for reducing the ore and lime, to the fineness required for extracting the quicksilver. He has put up two D retorts, each 9.6 feet long, and capable of receiving about 600 pounds of ore each, to a charge. Four charges can be made in each twenty-four hours—or about two and a half tons per day. This is merely designed for prospecting operations, to test the ore and mine thoroughly before fitting up extensive machinery and furnaces of large capacity. The test thus far has been perfectly satisfactory. The quicksilver was coming from the retorts quite freely when we left the mine last Saturday morning. The mine is looking quite well, although it has as yet been opened to only a few feet in depth. There are thousands of tons of ore on the surface, which, with a very little selection, it is thought will pay well by the use of large furnaces for extracting the metal, instead of the retorts now employed. We trust the enterprise may prove a success in every particular.

Parties interested in extension claims are watching with much interest the developments now being made by Mr. Oglesby, with the view of thereupon judging the value of their own ground.

THE BOOT AND SHOE BUSINESS IN SAN FRANCISCO.

San Francisco capitalists are beginning to find that there are other sources of profit for the investment of capital, than mines and merchandise. Three or four years of experience in the various departments of industrial enterprise, have fully proven that the inhabitants of the Pacific Coast can make themselves one of the most independent people in the world. In addition to the great metallic basis of commercial enterprise, for which the world looks chiefly to this coast for its supply, we have now fully proven that our agricultural resources, both in variety and abundance, are no where to be equalled; while at the same time the industry and genius of our people are fully competent to the task of rendering us quite as independent as any other community, in our home manufactures.

During the past week we have taken occasion to inquire into that particular department of manufacture named in the heading of this article, and have been quite surprised to learn the extent to which it is even now being carried on in this city. The success which has thus far attended enterprise in this direction, looks to the fullest assurance that California will soon become quite independent of either the Eastern States or Europe, for boots and shoes for both ladies' and gentlemen's wear. There are already some four or five wholesale manufactories in San Francisco alone.

The pioneer establishment in this line, in San Francisco, is that of I. M. Wentworth & Co., at 210 Pine street, which commenced operations in the fall of 1864. The State institution at San Quentin, however, introduced the manufacture about two years earlier. The class of goods manufactured by Messrs. Wentworth & Co., are ladies', children's and misses' boots and shoes. The particular speciality of their manufacture is that known as channel and copper nailed; a class of work now considered superior to any other, with the exception of sewed work, which, we believe, has never been introduced as an exclusive branch of manufacture on a large scale. In this kind of work the nails are driven, in a channel, which is afterward covered, making a neat and elegant finish. The nails are clinched by being driven upon an iron last. In order to have this part of the work done effectually, and in a manner to *hold*, the nails are manufactured of the very best Swede's iron, and are beaded. Work so put together stands much better than pegs, ordinary nailed work, or machine sewing; and is excelled only by hand sewing, which is altogether too expensive for general work, and the superiority of which bears no reasonable proportion to its increased cost.

These gentlemen have gone into this business with a determination not only to make it profitable, but also to convince the public that they can turn out a quality of work equal, if not better, in both style and finish, than the best imported from either Boston or Paris. An examination of their latest style of ladies' and misses' gaiters, is all that is needed to convince even the most fastidious that they have accomplished this latter purpose. They are doing it, moreover, by the use of California-made leather; importing nothing but their nails and lasting—which latter is of the best French manufacture. California sole leather, it is worthy of notice, is pronounced superior to any which can be imported; owing, it is said, to some peculiar quality in the bark used in this country for tanning.

In order to render the business profitable, they are introducing all the latest and most improved machinery, for expediting work and saving hand labor. A visit to their establishment affords a pretty plain showing that boot and shoe *making*, as it used to be called, may now well be termed *manufacturing*, the common mode of distinguishing between work done by hand and that accomplished by machinery. In following the process of the manufacture from its commencement, step by step, to the perfect shoe or boot, the attention of the observer is first called to a little rolling machine, which takes the place of the "lap-stone," that was once the invariable accompaniment of every shoemaker's "kit." Here the work of hours is done in minutes; next, a properly shaped die, with a single blow from a mallet, cuts out a heel-tap or sole, which was formerly a slow and tedious operation with a knife and pattern, while two or three sewing machines (five of which are used at this establishment) do the work of sewers, of binders and closers. Next we come to one of the most ingenious and useful machines in the entire range of shoe manufacture—the "eyelet machine." All the operator has to do is to drop a handful of eyelets in a kind of revolving hopper, work a treadle with one of his feet, and hold the "upper" in its proper place on the machine, while the holes, previously punched, are made to receive, automically, the eyelets as rapidly as stitches can be taken by a needle-woman. This, we believe, is the only machine of the kind in California. It is quite a recent invention. Ten or twelve of Bailey's patent head-blocks, are kept in constant employment in the room set apart for their especial purpose.

Those gentlemen are also expecting, by the next steamer, additional machinery—two large splitting machines, a skeiving machine, and a large rolling machine. They are determined to add to their machinery department everything which can facilitate and cheapen the various processes of their manufacture, without militating against the quality of their work. So great is the demand for their goods, that they find it almost impossible to supply the orders which are constantly coming in. The present state of the Eastern market, in connection with the sudden demand for boots and shoes at the South, which followed immediately upon the close of the war, is operating greatly to the advantage of California manufacturers. In order to encourage our own manufacturers, purchasers should discriminate between home and imported goods, giving preference to the former. Let those who have not hitherto tried home manufactured boots and shoes, make the experiment, and our word for it, they will not regret having done so; and will, moreover, render substantial aid in building up an important branch of home industry.

CAUSE OF WEAK EYES.—Indigestion is the principal source of weak eyes. Reading in the cars often seriously disturbs the vision. A delicate and wonderful apparatus within the eyes is constantly busy in adapting it to the various focal distances. The jerking motion of the car compels an exhaustive effort to maintain the required adaptation. Thousands of eyes are spoiled by reading in cars and other vehicles. Recently I was consulted by a railway expressman, who had become totally blind by reading newspapers in the cars. Thousands who have never consciously suffered any inconvenience from the habit, are obliged to wear glasses prematurely, to correct an unsteadiness of vision produced in this way. Reading with the gas-light before you is another cause of weak eyes. The light should always hang high and behind you, and be allowed to shine over the shoulder. If convenient, it should be over the left shoulder. If using kerosene, it is best to employ the lamps which hang on the wall. Neither should you read with your face towards the window. Reading by twilight is dangerous. Gradually accommodating itself to the receding light, the eye is unconsciously strained. I have seen more than one case of grave disease of the eye, produced by an undue effort to use the vision too long at twilight. White paint is another mischief to the eyes. White paint outside, white paint inside, white paint everywhere. During the brightest sunshine, the glare hurts the eyes. I wonder if it is not in bad taste likewise? I notice that artists have none of it about them. In our constant reading, the eye sight is much tried by the white paper. I hope that the tinted paper, with a still deeper color, may become fashionable. Avoid reading by artificial light when you can. We read too much. We read as we eat—pell-mell, hotchity potch; no mastication, no digestion. If, as a people, we read less we might know more.—*Dio Lewis.*

Commencement of Twelfth Volume

—OF THE—

Mining and Scientific Press

Published Every Saturday.

The title of our journal is a truthful expression of its character.

It affords a class of progressive information to the Miners, Mechanics and Professional Men of the Pacific Coast, which cannot be derived from books, or other publications.

Each Volume comprises, in reality, a book of new intelligence and facts relating to Mining, Mechanism, Metallurgy, Science and Art, developed by our rich and peculiar resources, and identical with our own industry and history.

By the encouragement of intelligent economy in LABOR and GOLD-SAVING, we shall make the PRESS a source of INDIVIDUAL PROFIT to its patrons, as well as a public benefit to every local community in which it circulates.

The prospects of our journal are now brighter than at any former period. Our facilities for furnishing a valuable paper are constantly increasing.

Following are some of the many opinions generously expressed by our neighbors:

Editorial Expressions:

The publishers intend to make it the "Scientific American" of the Pacific Coast. Every miner should have a copy of it in his cabin, for it will be filled with useful information to the pick and shovel fraternity.—[Trinity Journal.

Should be taken by every man owning "feet" [and brains] in this State.—[Beacon.

In no other ten journals can the reader find the same amount of reliable mining news as in the PRESS.—[Contra Costa Gazette.

Every stockholder in different mines will find it will pay to take and read this mining journal.—[Contra Costa Gazette.

The PRESS is to the Pacific Coast what the "Scientific American" is on the Atlantic. It deserves its success.—[Aurora Daily Times.

It is fully up to the times, and furnishes the latest mining improvements and intelligence,—[Calaveras Chronicle.

Every miner should subscribe for the PRESS.—[Calaveras Chronicle.

It presents a channel through which all mining notices may be cheaply consolidated into one sheet for the convenience of all stockholders.—[Mountain Messenger.

We can give our testimony that it is always replete with useful and valuable information to miners and mechanics. [Placer Herald.

It contains correspondence from different sections, giving accounts of new discoveries in gold, silver and copper, and should be taken by every person that wishes to keep well posted on the developments of our State and the Territories.—[Mountain Messenger.

With the last number is an index to the whole volume, most useful and valuable to those who keep files of that paper.—[Shasta Courier.

Prof. J. D. Whitney's address on Mining, is given entire. * * * We preserve the PRESS, and would like to have a full file.—[Napa Reporter.

The public should support the enterprise of the MINING PRESS, one of the best papers in the State, by a liberal patronage, as it is only by a system of legitimate reports that our mines can be favorably brought before men of capital below.—[Calaveras Chronicle.

Under the management of Messrs. Dewey & Co., the PRESS has been much improved in every respect. * * It deserves a liberal support.—[Virginia Union.

A good paper for this country.—[Humboldt Register, No.

Those who would have a good paper of this character, should subscribe now.—[Marysville Appeal.

It embraces one of the finest fields in the world, and seems to improve it. * * * It will be second to no scientific record now published on this continent.—[Los Angeles News.

A neat and useful journal. One of the most presentable and useful in the State.—[Sunday Mercury.

Such a journal has been needed on the Pacific Coast. The PRESS fills the bill.—[Reese River Reveille.

A splendid paper, and should have a good list of subscribers in prosperous Grass Valley.—[G. V. National.

We receive, regularly as clock work, this exceedingly valuable and interesting journal.—[Napa Reporter.

Interesting and important to miners and Mountain men. [Butte Record.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News dealers, acting as our agents, will receive liberal commissions.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

☞ BOUND VOLUMES FOR SALE. ☜

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES also especially favored by our rates, and careful attention is given to the legal publication of MINING NOTICES.

OFFICE—No. 505 Clay street, corner of Sansome.

DEWEY & CO., Publishers.

W. M. SMITH ..... W. G. EWER. ..... A. T. DEWEY.

THE FENCE QUESTION.—The Secretary of the Ohio Agricultural Society, who has been travelling in Germany, speaks of the custom of "fencing" there as follows: Every foot of land not in the forest is cultivated. There are no fences; the field is ploughed up to the roadside, and fruits and flowers are grown by every roadside that I travelled; no one disturbs them. The cattle, sheep and swine are kept in stables, or, if taken out, under the charge of a shepherd or herdsman. Here and there, dotted over the landscape, we saw sheep in pasture, but have seen no cattle or swine "running about loose." The *genus* "loafer" is unknown here.

HEAVEN drops little fragments of itself here and there along our way, by way of assurance that Heaven and love are one.

Situation Wanted.

AN ENGINEER, who would take charge of a Stationary Engine, in the city or country, for a reasonable salary, desires a situation. Address, "Engine," Box 17, San Francisco Post Office. 5v12tf

Our Patent Agency.

THE PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

PETALUMA, Oct. 4, 1865.

MESSRS. DEWEY & CO.—Gentlemen: Your note informing me that my patent for Crushing and Baling Machine is ordered to issue is at hand. Please accept my thanks for the prompt and business like manner with which the case has been conducted, and inclosed find twenty dollars for balance of Government fees. Respectfully, etc.

JACOB PRICE.

Metallurgy.

MOSHEIMER'S CONCENTRATOR

RECEIVED THE FIRST PREMIUM

From the ROYAL POLYTECHNIC SOCIETY, in Cornwall, and was highly recommended by the Commissioners as the most Simple and Effective Concentrator for all kinds of Ores.

Every Quartz Mill ought to have them, as they not only save Gold and Silver, but also the Quicksilver and Sulphurets, without extra labor. They can be built entirely of wood at the mine, and will separate more perfectly in one operation, than any other Concentrator in use. Apply to

J. MOSHEIMER,

23v11qy 423 Washington street.

EUROPEAN

METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful test has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well-extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

VOLUME TWELFTH.—The MINING AND SCIENTIFIC PRESS, with its last issue, commenced its twelfth volume. Since Dewey & Co. have "held the ribbons" its gait has been rapid toward a perfect journal. Its appearance evidences its prosperity, but doubtless, like some of the rest of us, it can stand increased encouragement. Let such be given, and, our word for it, volume thirteen will acknowledge receipt.—[Golden Era.

A NEW REMEDY FOR THE BLIND STAGGERS.—The Los Angeles *News* says that Mr. Gibson, a gentleman well known at the Monte, a few days since, had a favorite gray mare taken with the disease known as blind staggers. She laid down to die, and was pronounced dead by Mr. Asa Ellis. Mr. John Guest being present, bored through the skull of her forehead, just below the eyes, from which a pint of water flowed, and in a few minutes she rose to her feet and went to feeding!

LOVE the work you are doing and must do; but when it is done, train the rose-vines over your door.

OUR NEW YORK AGENCY.

MR. GEO. M. NEWTON is our authorized agent in New York City, and will receive advertisements and subscriptions for the MINING AND SCIENTIFIC PRESS at regular rates. Sample copies of our weekly and monthly issues can be procured by calling upon him, at the office of the "STOCKHOLDER," No. 72 William street.

The Circulation of the Press, already extensive, is rapidly increasing, and substantial men who can profit by widely disseminating information of their business amongst the most intelligent, influential, and industrial classes of the Pacific States and Territories will find no more effectual or economical medium for advertising.

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1 1865

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

Bound in Cloth—144 Pages, Duodecimo.

The Quartz Operator's Hand Book is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms, a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable Quartz Miner's Hand Book.

The Table of Contents of this book will be found on pa 415 of the Mining and Scientific Press of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

Office of the County Clerk of the City and County of San Francisco, State of California.—In County Court

In the matter of the application of LA MORRONENA SILVER MINING COMPANY, for Order of Dissolution.

Notice is hereby given, pursuant to law and an order of the Hon. Samuel Cowles, County Judge of said City and County, this day made, that La Morronena Silver Mining Company, a corporation duly organized and doing business in said City and County, has made application, by petition duly filed, that said Company be disincorporated and dissolved, and that said application will be heard by and before the Hon. Samuel Cowles, County Judge aforesaid, on the seventeenth day of February, A. D. 1866, at 10 o'clock A. M., in the Court Room of said County Court, in the City Hall Building of said City and County.

Witness my hand and the Seal of said County Court, this eighteenth day of January, 1866.

(Seal and U. S. Rev. Stamp, 50c, canceled.) WM. LOEWY, County Clerk. By J. Naputaly, Dep. Co. Clerk. 3v12-4w.

1852. 1866

A NEW VOLUME.

Fourteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents and contributors of distinguished ability in New York, Paris and London.

Miss BRADDON'S Greatest Sensation Story published from Advance Sheets:

RUPERT GODWIN;

—OR—

The Secret of Wilmindon Hall.

A NOVEL.

By Miss M. E. Braddon,

Author of "Lady Audley's Secret," "The Outcasts," "The Doctor's Wife," "Three Times Dead," etc.,

—IN—

THE GOLDEN ERA.

NOW IS THE TIME TO SUBSCRIBE!

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin—the favorite at the Greside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

Golden Era Building,

No. 543 Clay street, near Montgomery, San Francisco

Oakland Water-Cure.

APRIL 1ST, 1864, WE OPENED A HYGIENIC BOARDING House and Ladies' Health Institute in Oakland. The great advantage we have experienced since that time, in the treatment and cure of all those diseases peculiar to females, as well as those common to all, over that of San Francisco, induced us to give up the treatment of gentlemen in the city. We have accordingly removed our entire Bathing, Electro-magnetic, and Gymnastic Apparatus, which we used especially in the treatment of males, to our Health Institute across the Bay, and have found, after a trial of seven months, that gentlemen as well as lady patients recover, at our Fountain Farm Cure, one-third faster than in the city of San Francisco. The climate here is the most even one bracing to be found in the State. The grounds command a view unsurpassed in the world. The Institution is furnished with an abundance of pure, soft water, from numerous springs; and we now offer to Ministers, Teachers, Lawyers, Miners, Merchants, Mechanics, Farmers, and all other worthy persons, who desire to try the advantage of the only *rational* system of medicine, the hospitalities of our Hygienic Home and Cure. Young men who have become debilitated or lost their health by excesses, late toil, exposure, or bad habits, contract through ignorance of Physical Laws, may with us find more of the encouragements they need, and means that will restore them to health, than elsewhere in California.

We claim for Water-Cure and Hygienic Medication superior advantages over all systems of drug medication in the cure of all disorders, whether acute or chronic; that it is followed by none of those debilitating diseases, such as Piles, Chronic Diarrhœa, Torpid Liver, Constipation, Intense Nervousness, Neuralgia, etc., nor those terrible Secondary Diseases, known as Varicose Swelling of the Veins, Necrosis, or Decaying of the Bones, Ulceration of the Limbs, Mercurial Rheumatism, Urethal Strictures, etc., which we well know result from the free use of mercury and other metallic drugs, together with stimulants and vegetable poisons given to overcome acute diseases.

The Oakland Water-Cure and Eye Infirmary is by far the most complete in its facilities for the cure of all diseases commonly treated in all Eastern Water Cures of any like establishment on this coast, and the only one in California conducted according to the Theory and Practice of the New York Hydropathic College. We use all forms of Warm and Cold Wet Sheet Packs, the Electro-Chemical Bath, Steam Baths, Improved Sitz Baths, Douch Baths, a Patent Spray Bath, and Magic Baths. The last named was instituted by Dr. Smith with special reference to the cure of those diseases peculiar to miners, namely: Rheumatism, Inflammatory or Chronic, Stiff Joints, Paralysis, Mercurial, Lead, and Oak Poisonings. It is a sure cure for Ague and Fever. It aids more than any other Bath we have yet used in eradicating all kinds of drugs and infectious poisons, and in the cure of all disorders induced by exposure to dampness and water, foul air, absence of light and electricity, retorting metals, the malaria of rivers and low marshy grounds. Where there was a fair constitution left, even when drugs had been applied for months and years without a cure, we have, in the past seven years, treated successfully the following diseases: Chronic, Inflammatory and Mercurial Rheumatism; Paralysis; Lung, Bronchial and Catarrhal Affections; Diseases of the Heart, Kidneys, Liver; Dyspepsia, Constipation, Erysipelas, Scrofula, Piles, Inflammation of the Bowels, Chronic and Acute Diarrhœa, and all diseases and weaknesses peculiar to male and females. No physician in California is so favorably situated to furnish so many home comforts and hygienic conditions that are indispensable to the speedy recovery of nervous and chronic invalids. We have the only Female Institute boarding place in the State for men, women and children, with plenty of saddle and carriage horses for the use of patients and boarders.

To that class of Diseases and Weaknesses peculiar to females, and the medication that Hydropathic or Hygienic physicians employ in their cure, do we invite the special attention of patients and their friends. The ease and rapidity with which females suffering from general or special debility, recover in the bracing climate of the Bay, under Hygienic Medication, together with the universal success that has attended the treatment of females at Dr. Smith's Institutions, both in Sacramento and San Francisco, has induced us to make this class of human afflictions a specialty of our Institution. We have treated (mostly in the cure), over 300 females, several of whom had been "bedridden" for months and years, and all have been decidedly benefited, and with but few exceptions, returned to their homes in from two to six weeks, so far recovered as no longer to need a physician. We have never yet learned of a single instance of a relapse into their former condition.

There is not one female invalid in twenty that has been suffering from nervous debility or diseases peculiar to her sex, that cannot be permanently cured by spending from four to six weeks at our Cure, and at the more cost of $100. This statement we make in confidence, from an experience of the last seven years. From the many who have been treated at our Cure, we have yet to learn a single regret from husband or wife of the time or means they have expended in Hygieic Medication.

New York, Aug. 1, 1858.

To all whom it may concern:

This certifies, that Dr. Barlow J. Smith is a graduate of the New York Hygieo-Therapeutic College, which College has a regular Charter from the Legislature of the State of New York, and is authorized to grant diplomas, conferring on its students all and the same privileges and immunities in relation to the practice of the Healing Art, that are conferred by the Diplomas of any Allopathic or other Medical College in the country.

Dr. Smith has also devoted much attention to Phrenology, especially in its connection with Physiology and Pathology, a portion of the time under the instruction of Fowler & Wells, of this city, and has labored successfully as a teacher and lecturer on these subjects.

R. T. TRALL,
Principal New York Hygico-Therapeutic College.

To all whom it may concern:

I have known Dr Barlow J. Smith, both in our office as a Student, and a practical Phrenologist in the country, and from what I know of him I can cheerfully recommend him as an honest, faithful delineator of character, and as such can cheerfully recommend him to the public.

For the good of Science,
L. N. FOWLER, 308 Broadway, N. Y.

Dr. Smith spends a part of each day in San Francisco, attending to family practice and to Phrenological and Physiological examinations at his office, Room 13 Armory Hall, up stairs, corner Montgomery and Sacramento streets. Office hours from 9 A. M. to 2 P. M. Circulars sent on application. Address,

BARLOW J. SMITH, M. D.,
20v11tf San Francisco, Box 473.

Evoca Consolidated Copper Mining Company.

Location of Works: Conrt Hill District, near Black's Ferry, Del Norte County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 31st day of January, 1866, an assessment of twenty-five (25) cents per share was levied upon the assessable capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, at No. 537 Washington street, room No. 3, in the City and County of San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 3d day of March, 1866, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 19th day of March, 1866, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

CHARLES E. ABBOT, Secretary.

Office, 537 Washington street, Room 3. San Francisco, Cal. feb3

BUY

The Monthly Series

—OF THE—

MINING AND SCIENTIFIC PRESS.

Send it to Your Friends.

Issued at the close of EACH Month.

PRICE.....50 CENTS.

MONEY BY MAIL.—Subscribers and advertisers remitting us money in less sums than $50, can do so by mail at our risk, if they will register their letters; we will take no risk on unregistered letters, or letters by express. Remittances by express must be prepaid.

It is filled with reliable, useful and interesting matter, and to our miners who wish to understand the theoretical, as well as the practical part of their business, the MINING PRESS will be found an invaluable aid.—[Nya County News.

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpine County, California.
